Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants.

AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was AUSTIN 3/11/03 - SAMUEL- File available in active unassigned spill files. 5/14/04 - TRANSFERRED FROM TOMASELLO FOR REASSIGNMENT - END 3/3/05 - Austin - Reassigned to Rahman 5/6/2005 Sangesland took over this case. Spoke to consultant who said the #6 fuel oil tank was abandoned in place (filled with cement) back in 1998 (?). Apparently in 1997 or 1998 Sangesland wrote a letter to the owner saying that borings/wells were required around this tank and clean samples would be required to close the case out. Consultant said some boring/well work was done in 1998, but the case was not closed. They will review the data from then and redo anything that needs to be done. A new Closure Package will be sent to the DEC Soon . 6/2/2005 Sangesland reviewed a work plan submitted by Ted Yen of Don Carlo Environmental (718-857-3100) The work plan outlined 3 boring locations - 7 feet diagonally off the corners of the tank. Sangesland called Mr. Yen today, the work has already been done and a final report should be submitted Soon . 7/25/2005 Sangesland reviewed a Subsurface Closure Report dated July 12, 2005. All sampling was performed. Minor hit were found at Boring 3, however groundwater samples and another boring between the fill port and the building was clean. OK to close out. Spill is Closed with No Further Action - Does NOT meet Stds. 5/5/14-Vought-Received call from and spoke to Martin Rosenblatt (martinrosenblatt@hotmail.com Ph:917-972-8105) who formerly worked for NYC Public Advocates Office and also worked for Mario Cuomo as well. Rosenblatt lives across street from site and is a concerned citizen and was informed of development associated with open spill 1306324 and had attended a prior public meeting as well. Rosenblatt was referred to Vought by RSE. Rosenblatt has concerns with contamination on-site and Vought summarized scope of work including excavation of site to bedrock with installation of vapor/moisture barrier. Vought also noted lead agency was NYSDOH. Rosenblatt inquired about a Toxics Targeting Report that noted that site was not up to standards and requested explanation and Vought provided explanation of CP51 Guidance. Vought requested that Rosenblatt inform DEC if he has any other questions or observations of the site that are of concern (eg vapors)."

DEC Region: 2
DER Facility ID: 362860
DEC Memo: "5/20/2009 TTF Letter sent to: Mr. Steven Monez c/o St Lukes Hosp 555 West 57th St - Suite 5-46 New York, NY 10019 07/16/13 - Spill Case is transferred from Leszek Zielinski (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 10/20/2014 - V. Brevdo This TTF Spill Case is pertinent to the same property and the same AST in the basement of the residential building as in the Spill Case No. 0904155. Tank failed test on 05/12/2009 and then failed again the 2nd tightness test on 07/09/2009. Records for spill case no. 0904155 reveal that the No. 2 fuel oil tank was removed from concrete vault. The floor beneath was stained and PTC continued to break up floor. Soils beneath concrete smelled of fuel oil. Two samples were collected. Records for spill case no. 0904155 further state that Analytical results for samples revealed low level VOCs and SVOCs... A site visit was performed on 9-14-09 with Mark from PTC and Rich Vicari of hospital. PID readings of 9.5 ppm were detected. I (project manager - V.B.) recommended that some soil removal should take place and new endpoints collected. PTC will restore, epoxy paint and install two new 275 ASTs. On September 18, 2009, DEC project manager for spill case no. 0904155 inspected the site after PTC dug down beneath the concrete. PID readings of 2 ppm were detected. No significant oil staining or odors. Following completion of remedial work, DEC project manager for spill case no. 0904155 received documentation of cleanup with no significant detection of petroleum. Spill Case No. 0904155 was closed on 07/26/2010. As described above, this spill case (0901728), tank test failure and remediation activities are pertinent to the same tank as in spill case no. 0904155. Remediation completed in September 2009 fully addressed environmental concern related to tank test failures at this property. The Department hereby determined that the closure of this spill case - 0901728 - is appropriate at this time. Remediation is completed. Spill case is closed effective 10/20/2014. V. Brevdo"

DEC Memo: "3/2/15 TJD TTF Spreadsheet updated. 3/3/15 TJD Teleconference with Greg Hays of Sampson Mgmt to obtain email address. During interview, Mr. Hays, stated the reported spill was due to a failed vent line which has been replaced. He further states All Boro was onsite performing retest. DeMeo contacted Chris @AllBoro for status - he confirmed work was complete and will send photos and copies of both passing and failing tightness tests. 2/18/16 TJD File review. All Boro has provided required closure documentation. Spill cause was reported as a leaking above ground vent line. Both the above ground fill and vent lines were replaced. A total of (5) 55 gallon drums of contaminated debris were generated and properly disposed of as part of the remedial process. Following completion of the repairs a system tightness test was performed and passed. An epoxy coat was applied to the concrete basement floor. No further action is required. All documentation has been uploaded to DECDOCS. Spill closed."

Remarks: "test failure, bad vent line, retest pending repair"

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 1/2/2002 - Sangesland spoke with F&N about the site. F&N installed 5 wells in the sidewalk around the tank of a #6 oil spill. Well # 1,2,5 are hooked into a Floating Recovery System. Installed about 5 years ago and was very effective at pulling out lots of free product in the begining. Now the issue is remediation of saturated soil in the areas away from the recovery wells. #6 oil does not travel freely in soil and the existing system will not address the area more than three feet from the wells. Whoever takes over operation of this project will need to develop a remediation system

which addresses this suspended oil. 2/3/2003 Sangesland visited site with RND Services & Property Manager. Site has been excavated and the existing tank has been cut up. 90% of the old tank has been removed along with a large amount of contaminated soil. According to RND, the hole has been dug down to bedrock and as wide as possible. Sangesland requested a closure report with end point samples, photos and a write up describing the small residual contamination left at the site. 7/8/2003 Sangesland reviewed a report by RND dated January 2003, but submitted to the DEC on July 7, 2003. This report documented all of the work done to excavate the old tank along with 156 tons of contaminated soil. Due to the location of the the Con Ed box and the adjacent street, additional digging was not possible. The end result was a reasonably clean hole with some minor SVOC hits on the street side wall. The excavation went down to the bedrock under the tank and right up against the building foundation. No additional work will be required at this site. Spill Closed - Austin - 8/19/09 - See also spill # 0200291, et. al. Con Ed vault impacted by this spill - end"

Remarks: "caller received a call stating that apt building lost 5000 gals over the weekend tank was opened and cleaned and found that head of tank rotted "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS Notes #142176 On 4/9/02 at 11:27 L. First # 04738 Project specialist called to report that at 09:30 M. Gilson # 17065 of the I&A had found 1 gallon of residual fuel oil mixed with 500 gallons of water. This is in Vault-5535 & is located at 210 W. 89 St. He was there to do a disconnect. This substance was from a prior spill see incident # 122376. This will be a third party spill. A tag will be hung # 10792 (R. Biliski # 04919 I&A supervisor called with the tag #) No smoke or fire was involved. No sewers or waterways were affected. There is no movement on the water. No injuries were related to the spill. Weather conditions do not contribute to the hazard of the spill. No private property affected. The cleanup will start immediately, there is a tanker on location already to pump out the water from this location due to the sealed drains. UPDATE 4/9/2002 @ 17:13 HRS Spoke to Biliski # 04919 I & A, and he informed me that as of now the cleanup is complete. He needs to wait approx. a week to see if in fact the Historic spill of oil leaking into the structure is stopped. I down-graded the incident to a spill-unknown oil for this reason stated above. Yesterday, 4/30/02, MEHS, I&A, flush operations and SESCO were present @ V 5535 IFO 210 W.89 th st . Following a predetermined designed template, holes were drilled and a new to the site material(Duro Soil) was injected into these holes to waterproof and correct the continuing but slight 3rd party fuel oil migration being experienced into the vault. After a short curing period, the vault will be re-cleaned and oil leak monitoring will again begin. Call with any questions UPDATE: 7/16/02 See e-mail from Frank Romano, Manh. EH&S to R. Pellegrino, Manh. Envir. Desk dated 7/15/2002: Bob, Please update the E2mis report for the work completed @ 210 W.89th st on Friday June 14,2002. This work included participation from I & A for access, Flush to dewater (150-200 gal) and pressure clean vault, and corp. transportation to stand by an with an <50 tanker. Vendor SESCO inspected, drilled a new hole matrix and inserted 20 gallons of 3M 5600 grout in this matrix. I am requesting a return to the site on Friday July 21,2002, to allow SESCO to remove remaining grout plugs and thoroughly inspect for any further oil leaks or product migration. The work should be completed within a 4 hour period. Please provide and confirm that an I & A crew will provide access I met with Bob O'neil this morning @ the site after the injection plugs were removed and the vault was thoroughly cleaned and inspected. No new oil was apparent We will re-inspect

Thursday (7/25) for steam genny Friday(7/26) if no further oil leaks or migration is experienced over the coming week. Dan We're out on this location this morning. Previous attempts to seal this location have not been successful, however, the amount of oil seeping into the structure has been reduced significantly. If in fact the oil has stopped seeping into the structure, we'll be employing the following plan to get a unit installed. 1. Verify today that the oil is not migrating into the structure. 2. Next Friday, have Brooklyn Environmental Ops soda blast the walls to remove any oil which has been absorbed by the concrete. 3. Monitor the structure for 1 week for signs of oil either seeping into the structure or leeching from the walls. If necessary, have the structure soda blasted again. 4. If everything goes well, the unit can be installed in about 3 weeks. I know that might seem long. The history on this structure is that it has thwarted every effort control the oil. I don't want to drop a unit until I'm sure the oil is under control. Walter I could use the assistance of Brooklyn Environmental with a difficult cleanup location. I have a vault 5535 F/O 210 w.89th st which is a long term remediation project. The vault is in an area where there is a fuel oil leak from a nearby building. Rather than wait for the building to cleanup the spill, we moved forward with sealing the vault. After numerous attempts, the sealing looks like it has worked and there is no oil migrating into the structure. The is oil seeping from the walls which I suspect is oil absorbed by the walls during the initial leak. These have proved difficult to clean effectively. I would like to have your crew use your soda blast to clean these walls. I have attached a copy of the oil sample. The parking days are Tuesday & Friday 8-11am. UPDATE: 8/05/02 Bob O'Neil, I&A North Planner made arrangements for this vault to be cleaned again by the special Brooklyn/Queens Environmental Operations team with their steam cleaning and soda blasting technique. The cleanup is scheduled for Tuesday, Aug. 6, 2002. UPDATE 8/6/2002 @ 18:09 HRS Mike Knox #38504 of Brklyn/Queens Envir. reported that the cleanup was completed @ 1745 HRS on 8/6. Mike Knox states that the walls are still stained. No solids were removed. 300 gallons of water and cleaning fluids were removed. The structure was double-washed with 35 gallons of BIO-GEN. The walls and floor were steamed cleaned. The crew used 7 bags of baking soda via the Soda blast technique. The Environmental tag # 10792 was removed. Austin - 8/19/09 - See spill # 9810768. Remediation work of tank rupture in apartment completed in 2003 (note: unable to clean around Con Ed vault due to sability issues) Spill # 0200291 closed, based upon work under # 9810768 - end" "oil discovered in manhole "

DEC Memo: "01/20/06: This spill transferred from J.Kolleeny to S.Kraszewski. One 9.5K tank removed in 1998 and replaced by one 6K tank. No contamination discovered during excavation. According to documentation a site assessment was to be performed on 6/5/98 by DC-Environmental. Must contact NYCHA to find out if assessment was done. - SK 09/01/06: DEC Lead for this spill changed from unassigned to S. Kraszewski. - J. Kolleeny 02/09/07 - J.Kann - Spill reassigned from S.Kraszewski to J.Kann. 3/10/11: J.Kann - Investigative work plan submitted on 3/3/11. 11/13/14: J.Kann - emailed NYCHA on 8/14/14 requesting they try to locate the 1998 assessment. They responded on 9/25/14 indicating that they could not locate the assessment. Therefore, the SIWP was reviewed today and approved. 12/29/14. J.Kann - Email sent to NYCHA today approving Work plan. SSIR due 6/29/14 6/1/15: J.Kann - SIR received on 5/29/15. Given that no contamination was noted during tank excavataion work, the investigation was limited to soil sample collection and analysis. Based on the four borings advanced and 9 samples collected, with no exceedences above CP-51, the spill was closed. NFA."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE See also spills 9712384,9913364, 0207698 9/9/02 Called tenant numerous times and there was no one at the phone number, only an answering machine. I left two messages. The rental agent contacted the building superintendant. The super stated that a few gallons of oil spilled onto the floor on friday night when a nipple in the boiler failed, the oil was cleaned and the nipple replaced. The boiler is scheduled to be replaced Tuesday 9/10/02. A site visit is scheduled for Monday afternoon. 9/17/02 Site visit revealed Eastman cleaning the boiler room which had a maximum of 15 to 20 gal oil floating on water. Carlos Arenas is the super,phone 212-663-0318. The boiler is being replaced beginning on the week of Sept. 16th. A temporary boiler will be placed outside the building while the work is being completed. A representative from the building will call when all work has been completed and all messes associated with the burner replacement are cleaned. 10/25/2002 - Sangesland on Desk Duty received another spill report on smells from this basement. Spill # 0207698 No call back name or phone number was provided. Sangesland spoke with Super's wife. She said a new tank was built in place on 10/23 & 10/24 and all the work is now finished. Building manager is David Eisientien at 212-582-9080. 11/13/2002 spoke with mgnt. co. David E., he stated that the boiler replacement was completed, all of the residual oily stains were cleaned and DEC was welcome to stop by to inspect the final cleanup anytime. 11/21/03 nfa"

Remarks: "caller reporting oil tank failed and the landlord won't do anything to clean it up"

SWIS: 3101
Town: New York City
Record Added Date: 05/04/2015
Record Updated Date: 07/07/2017
Update By: MJKOMORO
Site Description: Location: The site is located at 267-273 West 87th street in the Upper West Side neighborhood of Manhattan, New York. The site is approximately 0.23 acres (10,070 square-feet) in area. Site Features: The site consists of two parcels of land, Block 1235, Lots 5 and 7. Lot 5 is improved with a three-story parking garage structure with a basement. Lot 7 is improved with a seven-story parking garage with a basement. Each lot has 50 feet of frontage along the north side of West 87th Street. Current Zoning and Land Use: The site is zoned R10A which allows mixed residential and commercial use. The site is currently vacant and inactive, and intended use will be for mixed-use Residential and Commercial. The surrounding parcels are currently used for a mixed-use of residential and commercial complexes. Past Use of the Site: The site was historically developed with two structures, which were possibly indicative of stables, in 1902. By 1912 the portion of the site identified as Lot 5 was improved with the current site building. The portion of the site identified as Lot 7 was improved with a structure identified as N.Y. Cab Company. This structure appeared to be the same structure depicted on-site in 1902. The current site building on Lot 7 was constructed in 1916. The entire site was utilized as a parking garage until recently. Site Geology and Hydrogeology: The site is approximately 80 feet above mean sea level. The topography of the site is generally level, and the surrounding area slopes to the west-southwest toward the Hudson River. The subsurface strata at the site consists of historic urban fill material consisting of sands, silts, clays and brick fragments encountered ranging from 0.2 to 7.5 feet below ground to where the bedrock surface is encountered. Groundwater was encountered at depths ranging from approximately 12.5 to 16.59 feet below ground surface. Based on groundwater gauging, localized groundwater within the bedrock is estimated to flow to the west.

Env Problem: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil: A total of twenty-four samples were collected at depths ranging from 1 to 15.5 feet below ground surface (bgs). Petroleum-related VOCs including ethylbenzene (ranging from 100 parts per million (ppm) to 150 ppm), toluene (ranging from 3.2 ppm to 53 ppm) and xylene (ranging from 69 ppm to 620 ppm) were detected at depths of 4 to 7.5 feet bgs at the southwestern corner of the property exceeding the soil cleanup objectives (SCOs) for unrestricted use. Elevated levels of metals including trivalent chromium were detected on-site above the unrestricted use SCOs across the site to the bedrock. Average concentration of trivalent chromium found on-site was approximately 51 parts per million (ppm), which exceeds the soil cleanup objective (SCO) for unrestricted use of 30 ppm. Trivalent chromium found off-site at location SB21 slightly exceeds (ranging from 50 ppm to 70 ppm) the unrestricted use soil cleanup objective of 30 ppm. Groundwater: Two bedrock monitoring wells were installed on the site and one downgradient bedrock monitoring well was installed off-site. Elevated concentrations of PCE at 880 parts per billion (ppb), TCE at 160 ppb and cis-1,2-DCE at 26 ppb were detected in on-site groundwater at the south side of lot 7, all of which exceed the

S117851125

Health Problem: groundwater standards of 5 ppb. Due to the absence of these compounds in the on-site subsurface soils, it has been concluded that these compounds are originating from an off-site, upgradient source. The off-site well had a concentration of cis-1,2-DCE of 9.9 ppb. Soil Vapor and Indoor Air: TCE was detected in sub-slab soil vapor at a high of 2,400 microgram per cubic meter (g/m3) and PCE was detected at a high of 7,100 g/m3 on the east side of the site. Neither were detected in indoor air. Ethylbenzene, toluene, xylene and other petroleum related compounds were detected at various sub-slab soil vapor sampling locations on the site. Data does not indicate any off-site impacts in soil vapor related to the site. There is an existing underground storage tanks(USTs) in the southwestern corner in lot 7.

Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People may contact site related contaminants if they dig below the surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into the overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of the buildings, is referred to as soil vapor intrusion. Because the site is vacant, the inhalation of site-related contaminants due to soil vapor intrusion does not represent a current concern at the on-site buildings. However, the potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site development. Environmental sampling indicates that site-related contamination does not pose a soil vapor concern for off-site buildings.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 10/13/05, SA: PBS record shows that an above ground 5000 gal cap. tank was closed on 6/1/02 at this location. Left message on both nos. to call me back. 10/21/2005: Talked to Vol. of America (212 865 7000 ext 217). That person informed me that he was working there at that time but could not remember any incident happend like that. Also informed, the site is now very clean and there is no problem exits now. (Sadique) 12/22/2005: Site visit may help to close the spill. (Sadique) 01/20/2006: John Grathwol and I visited the spill location on 01/18/2006 at 12:00pm. Met with building superintendent Mr. Arpad Szabo. Inspected the basement. They removed the old tank and put in a new tank. Vault around the tnak. Inside the vault and surrounding floor was very clean. Well maintained. No oil mark or spill were visible. Spill can be closed. (Sadique) 01/20/2006: Spill closed. (Sadique)"

DEC Memo: "1/23/07 sent ttf letter to: Michell Schamroth 176 West 87th Street Owners Corp. 176 West 87th Street New york, NY 10024 bf 3/5/07 Received tank test results for tank. Tank is AST in contact with soil. More info needed. Called Jack Terebelo of Halstead Management (212)508-7645 and left message that more information is needed. Also, tank may not be registered. Data base has 10K tank for #6 fuel at this location. PBS#2-214396. Tank test results state that it is a 5K tank for #2 fuel. bf 3/6/07 On 3/5/07 at 5:15 pm received message from Mr. Terebelo. (212)508-7391. Returned call and left message to call me back. bf 3/23/07 Received letter from Jack Terebelo of Halstead Management. Tank failed test on 1/16/07. Tank passed retest on 1/25/07. An opening was found at the top of the tank that was likely not plugged when the petrometer was changed in 2005. Expandable plug was inserted. He sent PTC numerous requests for a letter and theyhave not, so he is submitting the letter. Tank test results, invoice, and confirmation that the tank is 5K were enclosed. bf 2/28/08 Called Joe Ostrowski of Petroleum Tank Cleaners. Two old lines at manhole cover were never sealed. After they sealed them, the tank passed tightness test. Will talk to Mark Salamack tomorrow re: letter for DEC closure. bf 4/1/08 Sent fax to M. Salamack requesting response to ttf letter. bf 4/2/08 Received fax from M. Salamack of PTC. Gauge line was broken. Line repaired and tank passed test on 1/25/07. Passing test results attached. NFA. bf"

DEC Region: 2
DER Facility ID: 203625
DEC Memo: "01/30/06: This spill transferred from J.Kolleeny to S.Kraszewski. Soil contamination found during the removal of one 33K tank in 1990. A Phase II report was conducted in 1993 to assess the extent of the contamination. Eight soil borings and five monitoring wells were installed. The greatest oil concentrations in soil were found around tank 001 and the boiler room wall. TPH ranged from ND to 48,000 ppm. Free product was found in MW-2 and a sheen noticed in MW-1, MW-4 and MW-5. Several VOCs detected but noe above guidance values. Phase II proposed additional MWs and a product recovery well. In 1995 a pneumatic system with 2 RWs was installed. Last update for the system was 2002 and it was on-line with no product in the RW. Need a site status update for the recovery system. - SK 02/14/06: This spill closed to consolidate with open spill #9103651. - SK 03/06/06: This spill reopened and has no connection with spill #9103651. - SK 9/22/06: Spill transferred from Kraszewski to Kann. 1/25/07 - J.Kann - monitoring report submitted on 11/14. No product in wells. Will prepare a generic letter comenting on report format. A work plan is past due - Schedule D indicates it as December 2006. NYCHA was informed this in the letter of 1/5 which approved the submitted Schedule D. 3/29/07 - J.Kann - WP submitted 3/23/07 and is under review. WP based on discussions with NYCHA at a March 13, 2007 meeting. 7/31/07 - J. Kann - Work Plan approved on April 3, 2007. Work performed on site. Issue regarding current seepage into basement boiler room. NYCHA's consultant GF to arrange a site visit with DEC to determine what additional work is necessary. 10/25/07 - J.Kann - requested a site visit from NYCHA based on their consultants findings. Walked through boiler room and found no evidence of seepage. Discussed preliminary results of field work conducted earlier this year. No floating product and minimal dissolved SVOCs found in upgradient wells. NYCHA will finalize report and submit to DEC for review. 05/23/08 - J.Kann - based on review of Gannett Flemings report, minimal SVOC exceedences exist in soils at 8 ft bgs. Groundwater samples detected no VOCs and minor SVOC exceedences in two upgradient wells. Discussed site with Vadim and agreed on closure. NYCHA was sent an email. "

DEC Memo: "TTF letter sent. 3/4/05 tiple received letter stating tank was changed, not registered for removal/replacement. Referred PBS issue, called Orsid to request documentation concerning ttf, potential release or proof of clean..//////// 07/31/06: This spill is transferred from Mr. Koon Tang to Q.Abidi. Called Angel at (718)367-9800 and talk to Mr. Jerry William he will fax me the supporting documents for closing the spill. -QA 08/02/06: Contacted to Mr. Zeljan Ugarkovic (Adriatic) Plumbing and Heating Corporation he said spill was in the basement. Tank is on the concrete and basement is cemented. Oil fill line is changed. Mr. Zeljan will fax me spill closing confirmation letter. -QA 08/08/06: Called Jerry William fill line was leaking that is the cause of Tank Test failure. Now you have to make borings. He said that he will send the proposals and site plan with the diagram. -QA 05/11/07: Called Mr. Jerry William at (718)367-9800 to discuss regarding spill. He said that he will pull out the record and he will call me back. -QA 05/21/07: Called Mr. Phillip Syskrot to discuss regarding spill. He said that he talked to Mr. Jerry William (Controlled Combustion) very soon he will send work plan with diagram for approval. -QA 10/03/07: Called Mr. Jerry William and discussed regarding spill. He said that he will call to Mr. Phil SYSKROT At (212)484-3767. After discussion with Mr. Syskrot Mr. Jerry will call me regarding spill. -QA 10/05/07: Called Mr. Phil Syskrot at (212)484-3767 to discuss regarding spill. He was not there left message to call me back. -QA 10/22/07: Called Mr. Phil Syskrot (Orsid Realty) at (212)484-3767 and said that they have to make three soil borings around the tank and to send a diagram showing tank area, fill line and fill port. Also faxed subsurface investigation letter of dated August 11, 2006 again. -QA 11/20/07: Called Mr. Zeljan Ugar covic (Plumbing and heating Corporation) at (718)932-7300 he said spill was in the basement. Fill line was leaking, He changed the fill line there was no oil on the basement. Basement floor was concreted. So on the basis of available information, I closed this spill. -QA"

It says that the UST has been emptied and cleaned by Controlled Combustion and a separate free standing temp tank was set up. The building owners are now going to take soil samples from around the UST to determine if any contamination exists. Further action on closing this UST is dependent on the results of these tests. A new AST will be constructed in the building basement soon 12/27/04 TJD Closure report submitted by Controlled Combustion. Original Spill was for a tank test failure reported to be a dry leak. Four soil samples were collected from beneath the 15K UST. All analytical data within acceptable range. Tank was closed in place. No further action required. Spill closed."

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017	Source: EPA

Number of Days to Update: 98	Next Scheduled EDR Contact: 01/15/2018
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017	Source: EPA

	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/11/2017	Source: EPA
Date Data Arrived at EDR: 07/21/2017	Telephone: 800-424-9346

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

NJ SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

NY ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NY E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

	Data Release Frequency: Varies

NY HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

266-270 WEST 96TH STREET
266-270 WEST 96TH STREET
NEW YORK, NY 10025

TARGET PROPERTY COORDINATES

Latitude (North):	40.794752 - 40° 47' 41.11"
Longitude (West):	73.972787 - 73° 58' 22.03"
Universal Transverse Mercator:	Zone 18
UTM X (Meters):	586660.6
UTM Y (Meters):	4516269.0
Elevation:	60 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5940599 CENTRAL PARK, NY
Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>

3604970089F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
CENTRAL PARK	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Ordovician
Series: Lower Ordovician and Cambrian carbonate rocks
Code: OC (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinator soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

RE: PUBLIC RECORDS REQUEST of 11/1/2017, Reference # W028759-110117

Dear Kimberly Del Col,

I write in response to your Freedom of Information Law (FOIL) request seeking: Pursuant to the Federal Freedom of Information Act (5 U.S.C 552 et esq.) dealing with the examination and duplication of documents maintained by public agencies, Langan is requesting any information or copies of files regarding environmental conditions or the above property, such as environmental permits, notices of violation, spills/discharges, incidents, storage or disposal of hazardous substances, Underground Storage Tanks (USTs), Leaking Underground Storage Tanks (LTANKS), asbestos abatement, and any other environmental reports that your department may be.

The Subject Property is located at 982 and 996 Fulton Street in Brooklyn, New York (Blok 2015, Lots 10, 16 and 17). The Subject Property is bounded by Fulton Street to the north, a parking lot and multifamily residential buildings to the east, a church followed by Lefferts Place to the south and Grand Avenue to the west..

A diligent search of the files maintained by the Department produced no responsive records.

If I can be of further assistance, please contact me at (718) 482-4940 and reference FOIL W028759-110117.

Sincerely,
Region 2 FOIL Coordinator

November 28, 2017

Dear Kimberly Del Col,

EPA-R2-2018-001574 has been processed with the following final disposition: Full grant.

This is in response to your Freedom of Information Act (FOIA) request, identified above, dated 11/10/2017, that you submitted to the U.S. Environmental Protection Agency (EPA). Your request seeks environmental information on the following:

"266-270 West 96th Street Block 1243, Lots 57, 59 and 60 Manhattan, New York"

The information that you are seeking is publicly available on EPA's *MyPropertyInfo* online database. The database will provide you with information concerning records the EPA has about a specific property, and it can be accessed at the link below:

<https://www.epa.gov/enviro/frs-query-page>

Because this information is publicly available, your FOIA request for this information is being administratively closed, in accordance with EPA's FOIA regulations. See 40 C.F.R. Part 2, Subpart A. ***Please note you should perform the initial search of a property of interest by visiting the above link. If your search produces results, then proceed with an information request for additional records under FOIA. Your FOIA submittal should be accompanied by these results.***

If you consider this response to be a denial of your request, you may appeal this determination to the National Freedom of Information Office, U.S. EPA, 1200 Pennsylvania Avenue, N.W. (2822T), Washington, DC 20460 (U.S. Postal Service Only). Only items mailed through the United States Postal Service may be delivered to 1200 Pennsylvania Avenue, N.W. If you are submitting your appeal via hand delivery, courier service, or overnight delivery, you must address your correspondence to 1301 Constitution Avenue, N.W., Room 6416J, Washington, DC 20001. Your appeal must be made in writing, and it must be received no later than 90 calendar days from the date of this letter. The Agency will not consider appeals received after the 90 calendar day limit. Appeals received after 5:00 pm EST will be considered received the next business day. The appeal letter should include the FOIA tracking number listed above. For quickest possible handling, the subject line of your email, the appeal letter, and its envelope, if applicable, should be marked "Freedom of Information Act Appeal." Additionally, you may seek assistance from EPA's FOIA Public Liaison at hq.foia@epa.gov or (202)566-1667, or from the Office of Government Information Services (OGIS). You may contact OGIS in any of the following ways: by mail, Office of Government Information Services, National Archives and Records Administration, Room 2510, 8610 Adelphi Road, College Park, MD 20740-6001; e-mail, ogis@nara.gov; telephone, 301-837-1996 or 1-877-684-6448; and facsimile, 301-837-0348.

Please contact Ms. Wanda Calderon of my staff if you have web access difficulties. This letter concludes our response to your request. Thank you for your interest in this information.

Respectfully,

/s/
Mary Mears
Public Affairs Director
U.S. EPA Region 2 (NJ, NY, PR, the US VI and eight Indian Nations)

ADDRESS: 360 WEST 31ST ST 8TH FLR. NY, NY 10001

SIGNATURE: Kimberly Del Col DATE: 11/14/17

2. TO THE APPLICANT:

-Records Provided

The reproduction costs for the records are \$_____. Please forward a check payable to the New York State Department of Health to the address listed above. If we do not receive your payment within 60 days, we will assume that you no longer wish to receive the materials, and they will be sent back to the originating unit. Accordingly, any future requests for information will require an initial deposit before processing.

Records have been (partially, fully) provided. (If not fully provided, date when records are expected to be fully provided:_____).

-Records Not Available

Records cannot be found after a diligent search.

The Department does not maintain records indicated, please contact:_____

-Records Denied or Redacted

I hereby certify that access to the records—or part of the records—have been denied to the applicant for the reason(s) checked below (You may appeal this denial of access in writing within 30 days to the Records Access Appeals Officer, Empire State Plaza, 1455 Corning Tower, Albany New York 12237):

- Specifically exempt by other statute(s).
- Unwarranted invasion of personal privacy.
- Would impair present or imminent contract awards or collective bargaining negotiations.
- Are examination questions or answers.
Are inter-agency or intra-agency materials that are not:
-statistical or factual tabulations or data
-instructions to staff that affect the public
-final agency policy or determinations; or
-external audits, including but not limited to audits performed by the comptroller and the federal government.
- Are trade secrets.

- Could, if disclosed endanger the life of any person.
- Are compiled for law enforcement purposes and which, if disclosed would:
-interfere with law enforcement investigations or judicial proceedings
-deprive a person of the right to a fair trial or impartial adjudication
-identify a confidential source or disclose confidential information relating to a criminal investigation, or
-reveal criminal investigative techniques and procedures
- Would jeopardize an agency's capacity to guarantee the security of its information technology assets, such assets encompassing both electronic information systems and infrastructures.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Langan Engineering, Inc. on Nov 02, 2017.

TARGET PROPERTY

266-270 West 96th Street
New York, NY 10025

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.
