CERTIFICATION

I, Jason J. Hayes, certify that I am currently a Qualified Environmental Professional as defined in 6 New York Codes, Rules, and Regulations (NYCRR) Part 375 and that this Remedial Investigation Work Plan (RIWP) was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the New York State Department of Environmental Conservation (NYSDEC) Division of Environmental Remediation (DER)-10 Technical Guidance for Site Investigation and Remediation.

Jason J. Hayes, PE, LEED^{AP}

1.0 INTRODUCTION

This Remedial Investigation Work Plan (RIWP) was prepared on behalf of 266 West 96th Street Associates LLC (the Volunteer) for the property located at 266-270 West 96th Street in the Upper West Side neighborhood of Manhattan, New York (the site). The Volunteer will implement the RIWP for site (New York State Brownfield Cleanup Program (BCP) Site No. C231133) pursuant to the Brownfield Cleanup Agreement (BCA) dated June 10, 2019 with the New York State Department of Environmental Conservation (NYSDEC).

The objective of the scope of work defined in the RIWP is to investigate and characterize the nature and extent of environmental impacts at the site and to provide sufficient information to evaluate remedial alternatives and threats to human health and the environment, as required under the BCP. This RIWP was developed in accordance with the process and requirements identified in the NYSDEC "Division of Environmental Remediation (DER)-10: Technical Guidance for Site Investigation and Remediation" (May 2010) and the New York State Department of Health (NYSDOH) "Guidance for Evaluating Soil Vapor Intrusion in the State of New York" (October 2006, with updates May 2017).

2.0 SITE BACKGROUND

2.1 Site Description

The site is located at 266-270 West 96th Street in the Upper West Side neighborhood of Manhattan, New York and is identified as Block 1243, Lots 57, 59 and 60 on the Manhattan Borough Tax Map. A site location map is provided as Figure 1. The site encompasses an area of about 10,700 square feet (0.24 acres). Lot 57 is improved with a vacant three-story building with a full cellar level that most recently operated as a power substation for the New York City Metro Transit Authority (MTA). Lots 59 and 60 are improved with two-story commercial buildings with full cellars and exterior patio spaces operated by the Salvation Army and National Association for the Advancement of Colored People (NAACP), respectively. Two active 275-gallon No.2 fuel oil above ground storage tanks (ASTs) are located in the cellar of the building on Lot 60. A site plan is provided as Figure 2.

The site is enrolled in the New York State Brownfield Cleanup Program (BCP) as 266-270 West 96th Street, BCP Site No. C231133. The Applicant has Volunteer Status. Previous environmental investigations completed at the site confirmed on-site impacts to soil and soil vapor. Groundwater sampling was not conducted during the previous environmental investigation.

According to New York City Planning Commission Zoning Map 5d, the site is currently situated within a residential district (R10A). This district typically contains apartment buildings set on the avenues and wide streets of Manhattan. Typical new buildings are apartment buildings between 21 and 23 stories with high lot coverage and street walls set at or near the street line. The site is undergoing CEQR and ULURP as a requirement for the City disposition of Lot 57 without the restrictions established in a prior disposition approval by the City Planning Commission.

2.2 Surrounding Property Land Use

The site is located in a mixed-use area with multi-story institutional, commercial, and residential buildings. The following is a summary of surrounding property usage:

Direction	Adjoining and Adjacent Properties			Surrounding Properties
	Block No.	Lot No.	Description	
North	N/A	N/A	West 96 th Street	Multi-story commercial and residential buildings
	1868	1	13-story residential building	
	1868	7501	35-story mixed-use commercial and residential building	

Direction	Adjoining and Adjacent Properties			Surrounding Properties
	Block No.	Lot No.	Description	
East	1243	55	Two-story commercial building	Broadway followed by Multi-story mixed-use, residential, and commercial buildings
South	1243	8	6-story residential building	West 95 th Street followed by multi-story residential and commercial buildings
		1	15-story institutional building	
West	1243	7502	16-story residential building	West End Avenue followed by multi-story institutional (Public School P.S 75) and residential buildings residential, and a playground
	1243	61	13-story residential building	

Public infrastructure (storm drains, sewers, and underground utility lines) exists within the streets surrounding the site. A land use map showing the adjacent and surrounding properties is provided as Figure 3.

Land use within a half-mile radius includes residential, commercial, and institutional uses and park land. The nearest ecological receptor is the Hudson River, located about 1,500 feet west of the site. Sensitive receptors, as defined in DER-10, located within a half-mile of the site include those listed below:

Number	Name (Approximate distance from site)	Address
1	Emily Dickinson School P.S. 75 (approximately 0.03 miles west of the site)	735 West End Avenue New York, NY 10025
2	Alfred E Smith School P.S. 163 (approximately 0.15 miles northeast of the site)	163 W 97th Street New York, NY 10025
3	Montclare Children's School (approximately 0.15 miles east of site)	747 Amsterdam Avenue New York, NY 10025
4	Chabad of the West Side (approximately 0.15 miles east of site)	166 W 97th Street New York, NY 10025
5	River Park Nursery School (approximately 0.15 miles east southeast of site)	711 Amsterdam Avenue New York, NY 10025
6	The Goddard School (approximately 0.15 miles south of site)	2495 Broadway New York, NY 10025
7	West Side Montessori School (approximately 0.19 miles southwest of site)	309 W 92nd Street New York, NY 10025

Number	Name (Approximate distance from site)	Address
8	Riverside Montessori School (approximately 0.19 miles southwest of site)	202 Riverside Drive New York, NY 10025
9	The Studio School (approximately 0.19 miles east southeast of site)	117 W 95th Street New York, NY 10025
10	La Escuelita (approximately 0.19 miles northwest of site)	225 W 99th Street New York, NY 10025
11	Manhattan Children's Center (approximately 0.22 miles southeast of site)	124 W 95th Street New York, NY 10025
12	Basic Trust (approximately 0.22 miles southeast of site)	127 W 94th Street New York, NY 10025
13	Bright Horizons at West 96th Street (approximately 0.23 miles east of site)	103 W 96th Street New York, NY 10025
14	Purple Circle Early Childhood Program (approximately 0.23 miles north of site)	251 W 100th Street New York, NY 10025
15	My Little Language School Bilingual Montessori (approximately 0.23 miles northeast of site)	225 W 99th Street New York, NY 10025
16	The IDEAL School of Manhattan (approximately 0.24 miles southwest of site)	314 W 91st Street New York, NY 10024
17	Solomon Schecter School of Manhattan (approximately 0.35 miles northeast of site)	805 Columbus Avenue New York, NY 10025
18	The Richard Rodgers School of the Arts and Technology P.S. 166 (approximately 0.38 miles south of the site)	132 W 89th Street New York, NY 10024
19	Community Action School (approximately 0.23 miles southeast of the site)	154 W 93rd Street New York, NY 10025
20	New York City Housing Authority's Douglass II Day Care Center (approximately 0.42 miles north of site)	820 Columbus Avenue New York, NY 10025
21	The Lillian Weber School of The Arts (approximately 0.43 miles southeast of the site)	32 W 92nd Street New York, NY 10025
22	Goddard Riverside Community Center (approximately 0.47 miles southeast of site)	593 Columbus Avenue New York, NY 10024

2.3 Site Physical Conditions

2.3.1 Topography

According to the preliminary architectural survey completed by True North Surveyors, Inc., dated August 2016, the site elevation ranges from about 54 to 62 feet in reference to the North American Vertical Datum of 1988 (NAVD88), and the surrounding area slopes gradually to the west towards the Hudson River.

2.3.2 Geology

According to Langan's May 2018 Subsurface Investigation Letter Report, the subsurface strata beneath the site consists of historic fill material generally characterized by brown, fine- to medium-grained sand with varying amounts of silt, gravel, clay, asphalt, concrete, brick, and glass extending to depths of about 3 to 8 feet below cellar grade or about 16 to 24 feet below sidewalk grade. The fill material is underlain by native soil generally consisting of medium-dense fine-grained silty sand with varying amounts of gravel and clay.

According to the USGS Bedrock and Engineering Geologic Maps of New York County and Parts of Kings and Queens Counties, New York, and parts of Bergen and Hudson Counties, New Jersey, dated 1994, the site is underlain by the Middle Ordovician to Lower Cambrian-Ordovician Hartland Formation, which generally consists of muscovite-biotite-quartz schist. Bedrock is anticipated to be about 6 to 12 feet below cellar grade or about 19 to 25 feet below sidewalk grad.

2.3.3 Hydrogeology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flows toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, coverage by impervious surfaces, and subsurface structures. Other factors influencing groundwater include depth to bedrock, the presence of anthropogenic fill, and variability in local geology and groundwater sources or sinks.

Infiltration of precipitation to the water table is likely minimal due to the current presence of impervious surfaces throughout the site. The majority of runoff drains to city sewers and then to one of the several wastewater treatment plants that serve the city. Groundwater in Manhattan is not used as a potable water source. Potable water provided to the City of New York is derived from surface impoundments in the Croton, Catskill, and Delaware watersheds.

Groundwater was not encountered during previous subsurface investigations. Groundwater flow at the site is inferred to flow to the north-northwest towards the Hudson River. Groundwater elevations and flow direction at the site will be evaluated during the Remedial Investigation (RI).

2.3.4 Wetlands

Wetlands on and near the site were evaluated by reviewing the National Wetlands Inventory and NYSDEC regulated wetlands map. There are no wetlands on or near the site.

2.4 Summary of Previous Environmental Investigations

Previous environmental reports were reviewed to inform this RIWP. These reports are summarized below and are included in Appendix A.

- *Phase I Environmental Site Assessment, prepared by Langan Engineering, Environmental, Surveying, Landscape Architecture, and Geology, D.P.C (Langan), dated February 2, 2018*
- *Subsurface Investigation Letter Report, prepared by Langan, dated June 2018*

February 2018 Phase I ESA for 266-270 West 96th Street, prepared by Langan

Langan performed a Phase I ESA in February 2018 in general conformance with ASTM International (ASTM) Standard Practice for Environmental Site Assessments E1527-13 and the United States Environmental Protection Agency (USEPA) All Appropriate Inquiries (AAI) Rule, for the purpose of identifying Recognized Environmental Conditions (RECs) in connection with the site. The following RECs were identified:

- REC 1 – Historical Site Operations: Historical operations on the site included a power substation (1912 - 2005) on Lot 57 and a dry cleaning facility (1950 - 1968) on Lot 60.
- REC 2 – Historical and Current Use of Adjoining Properties: Historical use of the adjoining properties included a dry cleaner (2000) and a medical laboratory (1938 - 1968) to the north of the site and a dry cleaner (1985 – present) with a Resource Conservation and Recovery Act (RCRA) generator listing (1998) to the south of the site.

June 2018 Subsurface Investigation Letter Report, prepared by Langan

A subsurface investigation was conducted to investigate RECs identified during the February 2018 Phase I ESA. The scope of the investigation included the following:

- A geophysical survey to locate potential underground storage tanks (USTs) and other subsurface structures.
- Advancement of eight borings to depths of up to 12 feet below grade surface (bgs) and collection of 15 soil samples.
- Installation of six sub-slab soil vapor points and collection of six sub-slab soil vapor samples and one ambient air sample.

The investigation provided the following findings:

- Soil contains semivolatile organic compounds (SVOCs), pesticides, and metals at concentrations exceeding Title 6 of the New York Codes, Rules, and Regulations (NYCRR) Part 375 Unrestricted Use (UU) and/or Restricted Use Restricted-Residential Use (RURR) Soil Cleanup Objectives (SCOs). SVOCs were identified above Commercial Use SCOs in boring SB02 from 4.5 to 5.5 feet bgs.
- Groundwater was not encountered during the investigation.
- Multiple VOCs, including petroleum-related VOCs and chlorinated volatile organic compounds (CVOCs), were identified in soil vapor samples above ambient air concentrations. Tetrachloroethene (PCE) and Trichloroethene (TCE) were detected in the soil vapor samples collected from the northern and western parts of the site (Lots 59 and 60). When applied to the New York State Department of Health Soil Vapor/ Indoor Air Matrices, the recommended outcome range for cis-1,2-dichloroethene, tetrachloroethene (PCE), and trichloroethene (TCE) detected in soil vapor samples ranges from “no further action” to “mitigate”.

A summary of historical soil and soil vapor sampling results are provided on Figures 4 and 5, respectively.

2.5 Areas of Concern

Based on site history and the findings of the previous studies, the areas of concern (AOCs) to be further investigated during the RI are described below and shown on Figure 6:

AOC 1: Historic Fill Material

Material from unknown sources may have been used as backfill during various phases of the site development history. The June 2018 Subsurface Investigation identified historic fill material impacted with SVOCs, pesticides and metals at concentrations above UU and/or RURR SCOs to depths of 3 to 8 feet below cellar grade across the site.

AOC 2: Chlorinated Volatile Organic Compounds in Soil Vapor

The June 2018 Subsurface Investigation identified chlorinated VOCs (CVOCs) in soil vapor samples at concentrations above those detected in the ambient air sample. When applied to the NYSDOH Decision Matrices, concentrations of cis-1,2-dichloroethene, PCE, and TCE in soil vapor yield recommendations ranging from “no further action” to “mitigate” (absent collocated indoor air data). CVOC impacts may be associated with the historical use of the site or may be emanating from off-site source(s).

AOC 3: Historical Site Operations

Historical operations on the site included a power substation (1912 - 2005) on Lot 57 and a dry cleaning facility (1950 - 1968) on Lot 60. Undocumented spills or releases of solvents, petroleum, chemicals, and/or other hazardous substances associated with these historical operations may have adversely affected soil, groundwater, and/or soil vapor beneath the site. Petroleum-related VOC and CVOC impacts to soil vapor may be a result of former site operations.

AOC 4: Anomalous PAH Concentrations in SB02

During the June 2018 subsurface investigation, historic fill material exhibiting a petroleum-like odor and staining and were identified in boring SB02 located in the south central part of the site. SVOCs, specifically polynuclear aromatic hydrocarbons (PAHs), were identified at anomalously high concentrations in the sample collected from the 4.5 to 5.5 foot interval (max. concentration 1,884 milligrams per kilogram [mg/kg]). These impacts may be the result of historical site operations or historic fill material.

3.0 SCOPE OF WORK

The objective of this RIWP is to investigate and characterize “the nature and extent of the contamination at and/or emanating from the brownfield site”, per Environmental Conservation Law (ECL) Article 27, Title 14 (Brownfield Cleanup Program). The rationale for each sampling location in relation to the AOCs and analytical parameters for each proposed sample are provided in Table 1. The field tasks are discussed in more detail in the following sections.

Geophysical Survey

- Perform a geophysical survey to locate potential unidentified USTs or underground structures and identify utilities. Sampling locations may be relocated as necessary based on the findings of the geophysical survey.

Soil Borings and Sampling

- Advance fourteen soil borings to about 20 feet below grade surface (bgs) or until refusal, whichever is shallower.
- Collect three soil samples from each soil boring for a total of 42 soil samples (plus quality assurance/quality control [QA/QC] samples) for laboratory analysis.

Monitoring Well Installation and Sampling

- Install and develop four permanent monitoring wells. Wells are anticipated to be located in bedrock, anticipated to be about 6 to 12 feet below cellar grade.
- Collect one groundwater sample from each monitoring well (plus QA/QC samples) for laboratory analysis.
- Survey and gauge monitoring wells to establish groundwater elevations and evaluate flow direction.
- Develop a groundwater contour map.

Soil Vapor and Ambient Air Sampling

- Install five sub-slab vapor points to a depth of about two inches below the existing concrete slab, and co-locate them with five indoor air samples.
- Install one soil vapor point to a depth of about two feet above refusal.
- Collect a total of five sub-slab vapor samples, five indoor air samples, one soil vapor and one ambient air sample for laboratory analysis.

Data collected during this RI will supplement the June 2018 Subsurface Investigation.

Modifications to this scope of work may be required: 1) due to site operations, equipment or other access restrictions; 2) in the event that unexpected contamination is detected and additional analytical data is needed; and 3) to adequately characterize and delineate subsurface impacts in compliance with the Brownfield Law, regulations and applicable investigation guidance documents (e.g., DER-10). NYSDEC and NYSDOH will be contacted to obtain approval for these modifications.

The field investigation will be completed in accordance with NYSDEC DER-10 Guidance and the procedures specified in the Health and Safety Plan (HASP) and the Quality Assurance Project Plan (QAPP) included as Appendices B and C, respectively. A Community Air Monitoring Plan will be implemented during this investigation (see Section 3.8.2 and Appendix D).

The names, contact information and roles of the principal personnel who will participate in the investigation, project managers, and subcontractors are listed below. The HASP contains emergency contact information (HASP Table 5) and a map with a route to the nearest hospital (HASP Figure 2). Resumes for Langan employees involved in the project are included in the QAPP (Appendix C).

3.1 Geophysical Survey

We will coordinate with a geophysical contractor to clear subsurface testing locations of potential subsurface utilities and to locate any potential USTs or other suspect anomalies. The geophysical survey will be completed using a collection of geophysical instruments, including electromagnetic and utility line locator instruments and ground-penetrating radar (GPR). Borings will be relocated as necessary to avoid subsurface utilities, infrastructure, or other impediments identified during the survey.

3.2 Soil Investigation

3.2.1 Drilling and Logging

An environmental drilling subcontractor will advance fourteen soil borings (designated SB09 through SB22) to further investigate the AOCs identified in Section 2.5. A plan showing the proposed boring locations is included as Figure 6. A Langan engineer, geologist or scientist will document the work, screen the soil samples for environmental impacts, and collect environmental samples for laboratory analyses.

Soil borings will be advanced from about 8 to 20 feet bgs or until refusal, whichever is shallower, using direct-push drilling technology (Geoprobe®). Soil will be screened continuously to the boring termination depth with a photoionization detector (PID) equipped with a 10.6 electron volt (eV) bulb and for visual and olfactory evidence of environmental impacts (e.g., staining and odor). Soil descriptions will be recorded in a field log. Boring logs will be presented in the Remedial Investigation Report (RIR).

3.2.2 Soil Sampling and Analysis

Up to three grab soil samples will be collected from each soil boring for laboratory analysis. For borings SB-09 to SB-18, one sample will be collected from the 0-2 foot bgs interval. A second sample will be collected from the bottom of the historic fill layer or, if encountered, from the interval exhibiting the greatest degree of contamination, where observed (based on the presence of staining, odor, and/or PID readings above background). A third sample will be collected from either the first underlying depth interval without evidence of impacts or the boring termination depth. For borings SB-19 to SB-22 (surrounding SB-02), grab samples depths will be determined in the field based on visual or instrumental indications of impacts.

The proposed soil samples are summarized in Table 1. Non-disposable, down-hole drilling equipment and sampling apparatus will be decontaminated between locations with Alconox® and water.

The samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to attempt to maintain a temperature of about 4°C) for delivery to a NYSDOH Environmental Laboratory Approval Program (ELAP)-certified laboratory. Soil samples SB-09 to SB-18 will be analyzed using the latest USEPA methods as follows:

- Part 375 List and Target Compound List (TCL) VOCs by USEPA methods 8260C/5035
- Part 375 List and TCL SVOCs by USEPA method 8270D
- Part 375 List PCBs by USEPA method 8082A
- Target Analyte List (TAL)/Part 375 List metals (including cyanide and hexavalent and trivalent chromium) by USEPA Methods 6010C/7471B/9010C/7196A.
- Part 375 List pesticides by USEPA methods 8081B and 8151A, respectively
- NYSDEC List Perfluorinated Chemicals (PFC) by EPA Method 537. A list of the PFAS compounds is provided in Table 2.

Soil samples collected from borings SB-19 to SB-22 will be analyzed for Part 375 SVOCs by USEPA method 8270D, only.

QA/QC procedures to be followed are described in the QAPP in Appendix C.

3.3 Groundwater Investigation

3.3.1 Monitoring Well Installation

Four soil borings will be converted to permanent groundwater monitoring wells. Wells are anticipated to be installed in bedrock. A plan showing the proposed well locations is included as Figure 6.

The bedrock wells will be installed 10 feet into bedrock by advancing steel casing through overburden and into the rock, grouting the annulus of the casing and borehole, and drilling through the bottom of the casing to the target depth. Should groundwater be detected above bedrock and monitoring wells installed in the overburden, the wells will be constructed using 2-inch diameter polyvinyl chloride (PVC) riser pipe with 0.01-inch slotted screens. Monitoring well screens will be set to straddle the groundwater table, if observed. Clean sand will be used to fill the annulus around the screen up to about two feet above the top of the screened interval. A two-foot bentonite seal will be installed above the sand and the borehole annulus will be grouted to the surface. The wells will be finished with flush-mounted steel manhole covers.

Following installation, wells will be developed using a surge block across the well screen to agitate and remove fines. The surge block will be moved within the well screen in 2- to 3-foot increments for approximately 2 minutes per increment. After surging, the wells will be purged

via pumping until the water becomes clear (having turbidity less than 50 Nephelometric Turbidity Units [NTU]). The well will then be allowed to sit for a minimum of one week prior to collecting groundwater samples.

3.3.2 Monitoring Well Survey

The location and elevation of the groundwater monitoring wells (top of casing elevations) will be surveyed. This data will be used with synoptic groundwater well gauging data to prepare a groundwater contour map to evaluate the direction of groundwater flow. Vertical control will be established by surveying relative to the NAVD88 datum by a NYS-licensed land surveyor. Elevations of the top of monitoring well casings and protective well casings will be surveyed to the nearest 0.01 foot.

3.3.3 Groundwater Sampling and Analysis

One groundwater sample will be collected from each of the four wells, as summarized in Table 1. Prior to sampling, one round of synoptic gauging for static water levels will be performed and the monitoring wells will be purged. Purging will consist of pumping, at a minimum, the stabilized drawdown volume plus the pump's tubing volume, and waiting until the physical and chemical parameters (e.g., temperature, dissolved oxygen, oxygen reduction potential, turbidity) stabilize within the ranges specified in the USEPA's Low Stress Purging and Sampling Procedure for the Collection of Groundwater Samples From Monitoring Wells, dated July 30, 1996, and 4th revision September 19, 2017. Samples will be collected with a submersible or peristaltic pump and dedicated polyethylene tubing. The pump will be decontaminated with Alconox[®] and water between each sample location. Development and purge water will be containerized for off-site disposal.

The groundwater samples will be collected in laboratory-supplied containers and will be sealed, labeled, and placed in an ice-chilled cooler (to maintain a temperature of about 4°C) for delivery to the laboratory. Groundwater samples will be analyzed using the latest USEPA methods as follows:

- TCL VOCs by USEPA method 8260C
- TCL SVOCs by USEPA method 8270D
- PCBs by USEPA method 8082A
- Metals (filtered and unfiltered) by USEPA method 6010C/7470
- NYSDEC List Perfluorinated Chemicals (PFC) by EPA Method 537
- 1,4-dioxane by EPA Method 8270D

QA/QC procedures to be followed are described in the QAPP in Appendix C.

3.4 Soil Vapor Investigation

3.4.1 Soil Vapor Point Installation

Five sub-slab vapor points and one soil vapor point will be installed in accordance with the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in the State of New York" (October 2006, with updates 2017). A plan showing the proposed sub-slab and soil vapor sample locations is included as Figure 6. Sub-slab vapor points will be installed within the existing site structures with a hammer drill to within 2 inches of the concrete floor slab bottom. The soil vapor point will be installed by advancing a vapor probe to two feet above the groundwater table. The sub-slab and soil vapor points will be installed using direct-push technology. If refusal is encountered, the soil vapor point will be set two feet above the refusal depth. The sub-slab vapor collection points will consist of inert sample tubing (i.e., polyethylene) and the annulus (i.e., the sampling zone) around the installed tubing will be filled with a clean, coarse sand pack followed by a hydrated bentonite seal to surface grade. Sub-slab soil vapor samples will be co-located with indoor air samples.

3.4.2 Soil Vapor Sampling and Analysis

Samples will be collected in general accordance with the NYSDOH "Guidance for Evaluating Soil Vapor Intrusion in the State of New York" (October 2006, with updates). The proposed vapor samples are summarized in Table 1. Before collecting sub-slab and soil vapor samples, a minimum of three vapor probe volumes (i.e., the volume of the sample implant and tubing) will be purged from each sample point at a rate of less than 0.2 liters per minute using a RAE Systems MultiRAE[®] meter. Purged soil vapor will be monitored for VOCs with the MultiRAE[®] during this process.

A helium tracer gas will be used in accordance with NYSDOH protocols to serve as a QA/QC technique to document the integrity of each soil vapor sampling point seal before and after sampling. The tracer gas will be introduced into a container surrounding the vapor point and seal. Helium will be measured from the sampling tube and inside the container. If the sample tubing contains more than 10% of the tracer gas concentration that was introduced into the container, then the seal is considered compromised and should be enhanced or reconstructed to reduce outside air infiltration.

After integrity of each seal is confirmed, sub-slab and soil vapor samples will be collected over an 8-hour sampling period into laboratory-supplied, batch-certified clean 6.0-liter Summa[®] canisters with calibrated flow controllers. All vapor samples will be analyzed for VOCs by USEPA Method TO-15.

A log sheet for each soil vapor sample will be completed to record sample identification, date and time of sample collection, sampling depth, name of the field engineer responsible for sampling, sampling methods and equipment, vapor purge volumes, volume of vapor extracted, flow rate, and vacuum of canisters before and after sample collection.

3.4.3 Indoor Air Sampling

Indoor air sampling will be conducted in general accordance with the 2006 NYSDOH Soil Vapor Intrusion Guidance document. Five indoor air samples will be collected in conjunction with co-located sub-slab vapor samples located within the building. Prior to sample collection, an NYSDOH Indoor Air Quality Questionnaire and Building Survey will be completed to document the potential presence of equipment or that could interfere with the laboratory analytical results. The buildings will be screened with a PID that can detect organic vapors at concentrations of parts per billion (ppb) during the survey.

The existing site buildings will remain in normal operation prior to and during sample collection. One ambient air sample will be collected from the breathing zone (about 3 to 5 feet) concurrently from an exterior area to provide information regarding background air conditions. The ambient and indoor air samples will be collected into individually certified-clean Summa canisters that are calibrated for an 8-hour sampling period. The ambient air sample will be collected into laboratory-supplied, batch-certified clean 6-liter Summa[®] canisters with calibrated flow controller over an 8-hour sampling period (concurrently with the soil vapor samples). The samples will be submitted to an NYSDOH Environmental Laboratory Approval Program certified laboratory for analysis of VOCs via EPA Method TO-15 with Selective Ion Monitoring (SIM).

QA/QC procedures to be followed are described in the QAPP in Appendix C.

3.5 Data Management and Validation

Laboratory analyses of soil, groundwater, vapor, and air samples will be conducted by a NYSDOH ELAP-approved laboratory in accordance with USEPA SW-846 methods and NYSDEC Analytical Services Protocol (ASP) Category B deliverable format. Environmental data will be reported electronically using the database software application EQulS as part of NYSDEC's Environmental Information Management System (EIMS).

Table 1 summarizes the proposed samples and laboratory analyses. QA/QC procedures required by the NYSDEC ASP and SW-846 methods, including initial and continuing instrument calibrations, standard compound spikes, surrogate compound spikes, and analysis of other samples (blanks, laboratory control samples, and matrix spikes/matrix spike duplicates), will be followed. The laboratory will provide sample bottles, which will be pre-cleaned and preserved in

accordance with the SW-846 methods. Where there are differences in the SW-846 and NYSDEC ASP requirements, the NYSDEC ASP shall take precedence.

Data validation will be performed in accordance with the USEPA validation guidelines for organic and inorganic data review. Validation will include the following:

- Verification of QC sample results (both qualitative and quantitative).
- Verification of sample results (both positive hits and non-detects).
- Recalculation of 10 percent of all investigative sample results.
- Preparation of Data Usability Summary Reports (DUSRs).

The DUSRs will be prepared and reviewed by the Program Quality Assurance Monitor (PQAM). The DUSRs will present the results of data validation, including a summary assessment of laboratory data packages, sample preservation and COC procedures, and a summary assessment of precision, accuracy, representativeness, comparability, and completeness for each analytical method. A detailed assessment of each sample delivery group (SDG) will follow. Additional details on the DUSRs are provided in the QAPP in Appendix C.

3.6 Management of Investigation-Derived Waste

Soil cuttings will be returned to the borehole unless:

- Free product or grossly-contaminated soil is present in the cuttings;
- Backfilling the borehole with cuttings will create a significant path for vertical movement of contaminants. Soil additives (bentonite) may be added to the cuttings to reduce permeability; or
- The soil cannot fit into the borehole.

Boreholes requiring disposal of drill cuttings will be filled with hydrated bentonite chips or clean sand and capped with asphalt or concrete. Excess investigation-derived waste (IDW), including soil cuttings, purged groundwater, and decontamination fluids, will be containerized in properly-labeled and sealed United Nations/Department of Transportation (UN/DOT)-approved 55-gallon drums and staged for future waste characterization and off-site disposal at a facility permitted to accept the waste. The drums will be staged in an area on-site, pending receipt of laboratory data and off-site disposal to an appropriate facility. The site will be secured during and after investigation to prevent public access to the site.

3.7 Air Monitoring

Air monitoring will be conducted for site workers and the community (Community Air Monitoring Program). Air monitoring results will be recorded in the field book during the investigation activities, downloaded from field instruments and summarized in daily reports.

3.7.1 Worker Air Monitoring

Air monitoring of the breathing zone will be performed periodically during drilling and sampling activities to document health and safety protection for the work team. We will monitor VOCs with a PID in accordance with the HASP (Appendix B). If air monitoring during intrusive operations identifies the presence of VOCs, the field engineer will follow the guidelines outlined in the HASP regarding action levels, permissible exposure, engineering controls, and personal protective equipment. If the VOC action level is exceeded, work will cease and the work location will be evacuated. Monitoring will continue until the levels drops to permissible limits, at which point, work will resume with continued monitoring. If high levels persist, field activities will be halted and the work relocated to another area. If dust emissions are observed, work will stop and dust suppression measures (i.e., water spray) will be implemented.

3.7.2 Community Air Monitoring Plan

In addition to air monitoring in the worker breathing zone, community air monitoring will be performed in compliance with the NYSDOH Generic Community Air Monitoring Plan (CAMP) during any intrusive work. The CAMP is included in Appendix D.

CAMP will consist of continuous monitoring for VOCs and dust emissions during ground-intrusive activities (i.e., soil boring and monitoring well installation). Upwind concentrations will be measured at the start of each workday, and periodically thereafter, to establish background concentrations. VOCs and dust emissions will be monitored at the downwind perimeter of the work zone, which will be established at a point on the site where the general public or site employees may be present. VOC Monitoring will be conducted with a PID equipped with a 10.6 eV lamp. VOC community air monitoring requirements will be conducted until it is determined that the site is not a source of organic vapors. Dust emissions will be monitored using real-time monitoring equipment capable of measuring particulate matter less than 10 micrometers in size (PM10) and capable of averaging a period of 15 minutes (or less) for comparison to the airborne particulate action level (e.g., DustTrak). If dust emissions are observed, work will stop and dust suppression measures will be used. The results will be presented in the daily reports (see DER-10 for details).

3.7.2.1 Special Requirements for Work Within 20 Feet of Potentially Exposed Individuals or Structures

If work areas are within 20 feet of potentially exposed populations or occupied structures, the continuous monitoring locations for VOCs and particulates must reflect the nearest potentially exposed individuals and the location of ventilation system intakes for nearby structures. The use of engineering controls will be considered to prevent exposures related to the work activities and to control dust and odors. Consideration will be given to implementing the planned activities when potentially exposed populations are at a minimum, such as during weekends or evening hours in non-residential settings.

- If total VOC concentrations opposite the walls of occupied structures or next to intake vents exceed 1 part per million (ppm), monitoring should occur within the occupied structure(s). Background readings in the occupied spaces must be taken prior to commencement of the planned work. Any unusual background readings should be discussed with NYSDOH prior to commencement of the work.
- If total particulate concentrations opposite the walls of occupied structures or next to intake vents exceed 150 microgram per meter cubed ($\mu\text{g}/\text{m}^3$), work activities should be suspended until controls are implemented and are successful in reducing the total particulate concentration to 150 $\mu\text{g}/\text{m}^3$ or less at the monitoring point.
- Depending upon the nature of contamination and remedial activities, other parameters (e.g., explosivity, oxygen, hydrogen sulfide, carbon monoxide) may also need to be monitored. Response levels and actions should be pre-determined, as necessary, for each site

3.7.2.2 Special Requirements for Indoor Work with Co-Located Residences or Facilities

Unless a self-contained, negative-pressure enclosure with proper emission controls will encompass the work area, all individuals not directly involved with the planned work must be absent from the room in which the work will occur. Monitoring requirements shall be as stated above under "Special Requirements for Work Within 20 Feet of Potentially Exposed Individuals or Structures" except that in this instance "nearby/occupied structures" would be adjacent occupied rooms. Additionally, the location of all exhaust vents in the room and their discharge points, as well as potential vapor pathways (openings conduits, etc.) relative to adjoining rooms, should be understood and the monitoring locations established accordingly. In these situations, it is strongly recommended that exhaust fans or other engineering controls be used to create negative air pressure within the work area during remedial activities. Additionally, it is strongly recommended that the planned work be implemented during hours (e.g. weekends or evenings) when building occupancy is at a minimum.

3.8 Qualitative Human Health Exposure Assessment

A Qualitative Human Health Exposure Assessment will be conducted in accordance with Appendix 3B of the NYSDEC DER-10, Technical Guidance for Site Investigation and Remediation. The assessment will be submitted in the RIR.

4.0 REPORTING

4.1 Remedial Investigation Report (RIR)

Following completion of the RI and receipt of analytical data, an RIR will be prepared. The report will include:

- A summary of the site history and previous investigations
- A description of on- and off-site conditions
- Sampling methodology and field observations
- An evaluation of the results and findings
- Conclusions and recommendations for any further assessment (if warranted), and remedial action objectives

The report will summarize the nature and extent of contamination at each area of concern and identify unacceptable exposure pathways (as determined through a Qualitative Human Health Exposure Assessment).

The report will include soil boring, monitoring well and soil vapor point construction logs, sampling logs, tabulated analytical results, figures, and laboratory data packages. The tabulated analytical results will include sample location, media sampled, sample depth, field/laboratory identification numbers, analytical results and the applicable Standards, Criteria, and Guidance (SCGs) pertaining to the site and contaminants of concern for comparison. The report will include scaled figures showing the locations of soil borings, monitoring wells, and soil vapor points, sample concentrations above SCGs for each media, groundwater elevation contours and flow direction, and, if appropriate, groundwater contaminant concentration contours.

4.2 Daily Reports

Daily reports will be submitted to NYSDEC and NYSDOH Project Managers by the end of each day following the reporting period and will include:

- An update of progress made during the reporting day
- Locations of work and quantities of material imported and exported from the site
- References to alpha-numeric map for site activities
- A summary of any and all complaints with relevant details (names, phone numbers)
- A summary of CAMP findings, including exceedances
- An explanation of notable site conditions

Daily reports are not intended to be the mode of communication for notification to the NYSDEC of emergencies (accident, spill), requests for changes to the RIWP or other sensitive or time critical information. However, such conditions must also be included in the daily reports. Emergency conditions and changes to the RIWP will be addressed directly to NYSDEC Project Manager via personal communication.

Daily Reports will include a description of daily activities keyed to an alpha-numeric map for the site that identifies work areas. These reports will include a summary of CAMP results, odor and dust problems and corrective actions, and all complaints received from the public.

The NYSDEC-assigned project number will appear on all reports.

4.3 Monthly Reports

Monthly reports will be submitted to NYSDEC and NYSDOH Project Managers by the 10th of each month and will include:

- Activities relative to the site during the previous reporting period and those anticipated for the next reporting period, including a quantitative presentation of work performed (i.e. tons of material exported and imported, etc.)
- Description of approved activity modifications, including changes of work scope and/or schedule
- Sampling results received following internal data review and validation, as applicable
- An update of the remedial schedule including the percentage of project completion, unresolved delays encountered or anticipated that may affect the future schedule, and efforts made to mitigate such delays

4.4 Other Reporting

Photographs will be taken of all investigation activities and submitted to NYSDEC in digital format. Photos will illustrate remedial program elements and will be of acceptable quality. Representative photos will be provided of each contaminant source, source area and site structures during site investigation. Photos will be included in the daily reports as needed and a comprehensive collection of photos will be included in the Final Engineering Report.

Job-site record keeping for all remedial work will be appropriately documented. These records will be maintained on-site at all times during the project and be available for inspection by NYSDEC and NYSDOH staff.

5.0 SCHEDULE

The table below presents an anticipated schedule for the proposed RI and reporting following the approval of the RIWP. A Gantt chart showing an overall project schedule is included in Appendix E. If the schedules changes, it will be updated and submitted to the NYSDEC.

Milestone	Weeks from NYSDEC Approval of RIWP	Estimated Duration (weeks)
RI Mobilization	2	2
RI Field Investigation	5	3
Laboratory Analysis	9	4
Remedial Investigation Report Preparation and Submission to the NYSDEC	17	8

Areas of Concern (AOCs):

- AOC 1 - Historic Fill Material
- AOC 2 - Chlorinated Volatile Organic Compounds in Soil Vapor
- AOC 3 - Historical Site Operations
- AOC 4 - Anomalous PAH Concentrations in SB02

Notes:

1. Soil sample depth intervals will be determined in the field.
2. Soil samples to be analyzed for New York State Department of Environmental Conservation (NYSDEC) Title 6 of the Official Compilation of New York Codes, Rules and Regulations (6 NYCRR) Part 375-list compounds.
3. TBD = to be determined (in the field)
4. VOC = volatile organic compound
5. SVOC = semivolatile organic compound
6. PCB = polychlorinated biphenyl
7. TCL = Target Compound List
8. TAL = Target Analyte List
9. QA/QC = quality assurance/quality control
10. NA = not applicable
11. PFCs = per-fluorinated chemicals as limited to the list of compounds designated by NYSDEC

* Soil borings SB01 through SB08 were previously installed during the June 2018 Subsurface Investigation

EXECUTIVE SUMMARY

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C. (Langan) was retained by Fetner Properties, LLC (the User), to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 266-270 West 96th Street in the Upper West Side neighborhood of New York, New York (the Subject Property). The Subject Property is identified on the Manhattan Borough Tax Map as Block 1243, Lots 57, 59, and 60. The Subject Property is about 10,080 square feet in area and is located on the city block bound by West 96th Street to the north, Broadway to the east, West 95th Street to the south, and West End Avenue to the west. Lot 57 is improved with a vacant three-story building with a cellar level that most recently operated as a power substation for the New York City Metro Transit Authority (MTA). Lots 59 and 60 are improved with two-story commercial buildings with full cellars and exterior patio spaces operated by the Salvation Army and National Association for the Advancement of Colored People (NAACP), respectively.

This Phase I ESA was conducted in accordance with ASTM International (ASTM) Standard Practice for Environmental Site Assessments E1527-13 and the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) Rule, for the purpose of identifying recognized environmental conditions (REC), historical RECs (HREC), controlled RECs (CREC) and business environmental risks (BER). There were no HRECS or CRECs identified at the Subject Property.

RECs

A REC is defined by ASTM E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property due to any release to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. The Phase I ESA identified the following RECs:

REC 1 – Historical Site Operations

Historical operations on the Subject Property included a power substation (1912 - 2005) on Lot 57 and a dry cleaning facility (1950 - 1968) on Lot 60. Undocumented spills or releases of solvents, chemicals, and/or other hazardous substances associated with these uses may have adversely affected soil, groundwater, and/or soil vapor on the Subject Property.

REC 2 – Historical and Current Use of Adjoining Properties

Historical use of the adjoining properties include a dry cleaner (2000) and a medical laboratory (1938 - 1968) to the north of the Subject Property, and a dry cleaner (1985 – present) with a Resource Conservation and Recovery Act (RCRA) generator listing (1998) to the south of the Subject Property. These uses may have resulted in inadvertent releases of solvents,

chemicals, and/or other hazardous substances that may have affected soil vapor or groundwater on the Subject Property.

BER

A BER is defined by ASTM E1527-13 as a risk that can have a material environmental or environmentally driven impact on the business associated with the current or planned use of a parcel of commercial real estate not necessarily limited to those environmental issues required to be investigated in this practice. The following BER was identified for the Subject Property:

The Subject Property is located within a former marshland that was backfilled to accommodate development in the late 1800s. Historic fill found in urban environments typically contains ash, demolition debris, and/or municipal waste products and may contain contaminants (e.g., semivolatile organic compounds [SVOCs] or metals) at concentrations above current regulatory standards and at hazardous concentrations. The likely presence of historic fill material will require implementation of soil handling and management procedures during site redevelopment to address excavation, re-use, handling, and off-site disposal.

Non-ASTM Environmental Considerations

A Non-ASTM Scope Consideration is identified by ASTM E1527-13 as an environmental issue or condition at a property that parties may wish to assess in connection with commercial real estate that are outside the scope of ASTM E1527-13. The following Non-ASTM Scope Consideration was identified for the Subject Property:

The buildings were constructed circa 1904 (Lot 57) and circa 1910 (Lots 59 and 60) and therefore may contain asbestos-containing materials (ACM), lead based paint (LBP), or polychlorinated biphenyls (PCB)-containing materials. An intrusive survey to identify ACM, LBP and PCB-containing material was not conducted as part of this Phase I ESA.

1.0 INTRODUCTION

Langan was retained by Fetner Properties, LLC (the User), to prepare a Phase I Environmental Site Assessment (ESA) for the property located at 266-270 West 96th Street in the Upper West Side neighborhood of New York, New York (the Subject Property). This Phase I ESA was performed for the User as part of the User's due diligence for a planned purchase of the Subject Property, and in general accordance with ASTM International's (ASTM) Standard E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process) and the United States Environmental Protection Agency's (USEPA) All Appropriate Inquires (AAI) Rule. The purpose of this Phase I ESA is to accomplish the following:

1. Identify Recognized Environmental Conditions (RECs) in connection with the Subject Property, as defined in The Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Designation E1527-13, which states: The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.
2. Provide services consistent with the USEPA 40 Code of Federal Regulations (CFR) Part 312 Subpart C Standards and Practices §312.20 AAI Rule.

1.1. Scope of the ESA

This Phase I ESA was conducted using a standard of good commercial and customary practice that is consistent with ASTM E1527-13. No significant scope-of-work additions, deletions, or deviations to ASTM E1527-13 were made in connection with this report, as described in Section 8.0. In general, the scope of this assessment consisted of obtaining information from the User; reviewing reasonably ascertainable information and environmental data relating to the Subject Property; reviewing maps and records maintained by federal, state, and local regulatory agencies; interviewing persons knowledgeable about the Subject Property; and conducting a site inspection. The specific scope of this assessment included the following:

1. A site reconnaissance to characterize conditions and assess the Subject Property's location with respect to adjoining and surrounding property uses and natural surface features. The reconnaissance included the surrounding roads and observations of surrounding properties from public rights-of-way to identify obvious potential

environmental conditions on neighboring properties. The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Subject Property and then progressing to adjoining and surrounding properties. Photographs taken as part of the site reconnaissance are included in Appendix A.

2. A review of the responses to the User/Client and Owner/Operator Questionnaires. The completed questionnaires are included in Appendix B.
3. A review of environmental databases maintained by the USEPA, state, and local agencies within the approximate minimum search area. The environmental database report was provided by Environmental Data Resources, Inc. (EDR), and is included in Appendix C.
4. Filing of Freedom of Information Act (FOIA) requests with federal, state, and local agencies. Copies of the FOIA requests are included in Appendix D.
5. A review of New York City Department of Buildings (NYCDOB) records and a Planning Commission Zoning Map. Available NYCDOB records and the Zoning Map are included in Appendices E and F, respectively.
6. A review of physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils, and hydrologic data.
7. A review and interpretation of aerial photographs, Sanborn[®] Fire Insurance Maps (Sanborn[®] Maps), historical topographic maps, and city directories to identify previous activities on and in the vicinity of the Subject Property. Copies are included in Appendices G, H, I, and J, respectively.
8. A review of an environmental lien search for the Subject Property. A copy of the environmental lien search report is included as Appendix K.
9. A review of published radon occurrence maps to evaluate whether the Subject Property is located in an area with a propensity for elevated radon levels.

1.2. Assumptions, Limitations, and Exceptions

This Phase I ESA report was prepared for Fetner Properties, LLC for the Subject Property located at 266-270 West 96th Street in New York, New York. The report is intended to be used in its entirety. Excerpts taken from this report are not necessarily representative of the assessment findings. Langan cannot assume responsibility for use of this report for any property other than the Subject Property addressed herein, or by any other third party without a written authorization from Langan.

Langan's scope of services, which is described in Section 1.1, was limited to that agreed to with the User and no other services beyond those explicitly stated are implied. The services performed and agreed upon for this effort comports to those prescribed in the ASTM Standard

E1527-13. Intrusive sampling (i.e., soil borings and groundwater sampling) was not performed as part of this Phase I ESA.

This Phase I ESA was not intended to be a definitive investigation of possible environmental impacts at the Subject Property. The purpose of this investigation was limited to determining if there are any RECs affecting the Subject Property. It should be understood that even the most comprehensive Phase I ESA might fail to detect environmental liabilities at a particular Subject Property. Therefore, Langan cannot “insure” or “certify” that the Subject Property is free of environmental impacts. No expressed or implied representation or warranty is included or intended in this report, except that our services were performed, within the limits prescribed by our client, with the customary standard of care exercised by professionals performing similar services under similar circumstances within the same jurisdiction.

The conclusions, opinions, and recommendations included in this report are based solely on the specific activities as required for the performance of ASTM E1527-13 and are intended exclusively for the purpose stated herein, at the specified Subject Property, as it existed at the time of our site visit.

2.0 SITE DESCRIPTION

2.1. Location and Description

The Subject Property is located at 266-270 West 96th Street in the Upper West Side neighborhood of New York, New York, and is identified on the Manhattan Borough Tax Map as Block 1243, Lots 57, 59 and 60. The Subject Property is about 10,700 square feet in area and located on the city block bound by West 96th Street to the north, Broadway to the east, West 95th Street to the south, and West End Avenue to the west. Lot 57 is improved with a vacant three-story building with a cellar level that most recently operated as a power substation for the New York City Metro Transit Authority (MTA). Lots 59 and 60 are improved with two-story commercial buildings with full cellars and exterior patio spaces operated by the Salvation Army and National Association for the Advancement of Colored People (NAACP), respectively. A Subject Property Location Map is included as Figure 1.

According to the United States Geological Survey (USGS) Central Park Quadrangle 7.5-minute Series Topographic Map, the Subject Property sits at an elevation of about 60 feet above mean sea level (msl). Based on visual observations of the surrounding area during the site reconnaissance, the Subject Property is located within an urban area characterized by multi-story commercial, residential, and institutional buildings. The surrounding area slopes gradually to the west towards the Hudson River. Site reconnaissance photographs are presented in Appendix A.

Surrounding property use is summarized in the following table:

Direction	Adjoining Properties	Surrounding Properties
North	West 96 th Street	A 35-story mixed-use commercial/residential building and a 6-story multifamily residential building followed by multi-story commercial and mixed-use commercial/residential buildings
East	A two-story commercial building	Broadway followed by a six-story mixed-use commercial/residential building
South	6- and 15-story residential buildings	West 95 th Street followed by multi-story residential buildings
West	13- and 15-story residential buildings	West End Avenue followed by a three-story school building

2.2. Description of Site Improvements

Improvements at the Subject Property are summarized in the following table:

SITE IMPROVEMENTS	
Size of the Subject Property	About 10,700 square feet
Buildings/Spaces/Structures	<ul style="list-style-type: none"> One vacant 3-story commercial building with a full cellar (Lot 57) Two two-story commercial/office buildings with full cellars and rear yards (Lot 59 and 60)
Surface Water	None
Potable Water Source	Municipal
Sanitary and Storm Sewer Utilities	Municipal
Electrical Utilities	Con Edison
Construction Completion Date	<ul style="list-style-type: none"> Lot 57: 1904 Lots 59 and 60: circa 1910
General Construction Type	<ul style="list-style-type: none"> Lot 57: Limestone Lots 59 and 60: Brick, concrete masonry
Cooling and Ventilation System Type	<ul style="list-style-type: none"> Lot 57: none Lots 59 and 60: central air
Heating System Type	<ul style="list-style-type: none"> Lot 57: none Lots 59 and 60: fuel-oil supplied boiler system
Emergency Power	None

2.3. Title Records

Langan researched ownership records for the Subject Property on the Automated City Register Information System (ACRIS) website (<https://a836-acris.nyc.gov/DS/DocumentSearch/Index>). According to ACRIS, Lot 60 is owned by NAACP Mid Manhattan Et. Al. Information for Lots 57 and 59 are not available on ACRIS; however, deed information obtained for the properties indicate that they are owned by New York City HPD and Salvation Army, respectively. Available title information for Lot 60 is summarized below.

Date	Document Type	First Party	Second Party
11/17/1975	DEED	Edward S. Gordon	NAACP Mid Manhattan Et. Al
07/08/1970	DEED	270 West 96 th Street Corp.	Edward S. Gordon
01/09/1986	DEED	Kathe H. Frederick	270 West 96 th Street Corp.

Langan's review of ownership records did not reveal RECs associated with the Subject Property.

3.0 USER PROVIDED INFORMATION

3.1. User Questionnaire

Per ASTM E1527-13, a User questionnaire was provided to the User to inquire about specialized information related to the Subject Property. Mr. Harold Fetner of Fetner Properties, LLC, completed the user questionnaire. Mr. Fetner stated that he is not aware of any environmental cleanup liens, land use limitations, chemical releases, or spills at the Subject Property. According to Mr. Fetner, the purchase price of the Subject Property reasonably reflects fair market value and is not attributable to any contamination known or believed to be present at the Subject Property. The completed User questionnaire is included in Appendix B.

4.0 ENVIRONMENTAL RECORDS

A regulatory database search was provided by EDR and is included in Appendix C. The EDR report provides a listing of sites identified on select federal and state standard source environmental databases within the approximate search radius specified by ASTM E1527-13. Langan reviewed each environmental database on a record-by-record basis to evaluate whether the identified sites represent a potential for environmental impact to the Subject Property. Langan also reviewed "Orphan Sites" listed within the report. Orphan Sites are those sites that could not be mapped due to inadequate address information. Any Orphan Sites that were identified by Langan within the ASTM search radii, either during the site reconnaissance or by cross-referencing to mapped listings, are addressed in the discussion below.

The following table lists the number of sites identified in standard and additional environmental record databases, within the prescribed search radius and appearing in the EDR Report.

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	Minimum Search Area	Subject Property listed	Number of Sites Within Minimum Search Area
USEPA DATABASES			
National Priorities List (NPL) (05/30/2017)	1 Mile Radius	No	1
Delisted NPL (05/30/2017)	1 Mile Radius	No	0
Superfund Enterprise Management System (SEMS, formerly CERCLIS) and SEMS-Archive (formerly CERCLIS-NFRAP) (05/30/2017)	1/2 Mile Radius	No	1
Resource Conservation and Recovery Act (RCRA) Corrective Reports (CORRACTS) (09/13/2017)	1 Mile Radius	No	0
RCRA Treatment, Storage, and Disposal Facilities (TSDF) (09/13/2017)	1/2 Mile Radius	No	0
RCRA Generators (Large Quantity Generator [LQG], Small Quantity Generator [SQG], Conditionally Exempt Small Quantity Generator [CESQG], Non-Generators [NonGen]) (09/13/2017)	Subject Property and Adjoining Properties	Yes	2
Facility Index System (FINDS) (09/18/2017)	Subject Property	Yes	1
Environmental Response Notification System (ERNS) (09/18/2017)	Subject Property	No	0

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	Minimum Search Area	Subject Property listed	Number of Sites Within Minimum Search Area
USEPA DATABASES (Continued)			
Federal Engineering Controls (US ENG CONTROLS) Sites Lists (08/10/2017)	Subject Property	No	0
Federal Institutional Controls (US INST CONTROLS) Sites Lists (08/10/2017)	Subject Property	No	0

Solid Waste Disposal Sites Registered Recycling Facility List (SWRCY) (06/30/2017)	1/2 Mile Radius	No	0
Chemical Bulk Storage (CBS) Underground Storage Tank (UST) and Aboveground Storage Tanks (AST) Databases (09/21/2017)	Subject Property and Adjoining Properties	No	0
Major Oil Storage Facilities (MOSF) UST and AST Databases (09/21/2017)	Subject Property and Adjoining Properties	No	0
Registered and Historical Drycleaners (NY DRYCLEANERS) and EDR US Historical Cleaners (10/27/2016)	1/4 Mile Radius	No	23

DATABASE RECORD SUMMARY			
Database Reviewed (Date of government version)	Minimum Search Area	Subject Property listed	Number of Sites Within Minimum Search Area
NYSDEC DATABASES (Continued)			
Petroleum Bulk Storage Facilities (PBS) UST and AST Databases (09/21/2017)	Subject Property and Adjoining Properties	No	2
EDR (PROPRIETARY) DATABASES			
EDR Historical Auto (N/A)	1 Mile Radius	No	3

N/A – Not Applicable; databases are reviewed as part of the Phase I ESA but not required as per ASTM E1527-13.

A description of the reviewed databases is included in the EDR Report (Appendix C). A summary of sites identified within the prescribed search area is presented below.

4.1. Federal Agency Database Findings

The Subject Property and/or sites within the respective minimum search areas as specified by ASTM E1527-13 were not listed in the following federal agency databases: delisted NPL, RCRA CORRACTS, RCRA TSDf, ERNS, US ENG CONTROLS and US INST CONTROLS.

National Priorities List

The NPL database identifies sites for priority cleanup under the Superfund Program. The Subject Property was not listed in the NPL database. One NPL site, Hudson River polychlorinated biphenyl (PCBs), was identified within the minimum search area. General Electric Co. discharged 1.1 million pounds of PCBs into a stretch of the Hudson River approximately 40 miles long between Fort Edward and Hudson Falls. Hudson Falls and Fort Edwards are both over 170 miles north of the Subject Property, therefore the NPL listing is not considered a REC.

SEMS (formerly CERCLIS) and SEMS-Archive (formerly CERCLIS-NFRAP)

The SEMS database contains data on potential hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). SEMS contains sites that are either proposed or on the NPL and sites that are in the screening assessment phase for possible inclusion on the NPL. SEMS Archive sites are sites that have been removed and archived from the inventory of SEMS sites. Archived sites indicate that, to the best of USEPA's knowledge, assessment at a site has been completed and that USEPA determined no further steps will be taken to list this site on the NPL, unless

information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The Subject Property was not listed in the SEMS or SEMS-archive databases and surrounding properties were not listed in the SEMS-archive database. One listing, Hudson River PCBs, was identified within the minimum search area for the SEMS database. As previously discussed, the site is located over 170 miles from the Subject Property and is therefore not considered a REC.

RCRA Generators Database

The RCRA Generators database is USEPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database included selective information on sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. LQGs generate over 1,000 kilograms of hazardous waste or over 1 kilogram of acutely hazardous waste per month; SQGs generate between 100 and 1,000 kilograms of hazardous waste per month; CESQGs generate less than 100 kilograms of hazardous waste or less than 1 kilogram of acutely hazardous waste per month; and RCRA Non-Gen are former hazardous waste generators. There are two listings for the Subject Property in the RCRA database, which are discussed below in more detail:

Site Name: NYCT Substation 14

Site Address: 264-266 West 96th Street

Description: The Subject Property was listed in the RCRA-LQG database with USEPA ID NYR000076638 in September 1999 for the generation of characteristic hazardous lead (D008) and corrosive (D002) wastes. RCRA violations were not identified. The site was also listed in the NY and NJ Manifest databases for the transport of 300 pounds of characteristic hazardous waste D008 (lead) in June 2002. Additional manifests for the transport of this material were not available. The hazardous material generation is likely the result of lead-based paint removal, and not related to subsurface conditions. Because of the likely type and quantity of hazardous waste generated/transported, this listing is not considered a REC.

Site Name: Con Edison Service Box: 16581

Site Address: 268 West 96th Street & West End Avenue (in front of Lot 59)

Location: northern-adjointing sidewalk/street

Description: The site was listed in the RCRA-CESQG database with USEPA ID NYP004328126 in July 2013. RCRA violations were not identified. The site was also listed in the NY and NJ Manifest databases for the transport of 400 pounds of characteristic hazardous waste D008 (lead) in July 2013. The hazardous material generation is likely not related to subsurface conditions. Based on the lack of violations and the quantity of hazardous waste generated/transported, the site is not considered a REC.

Additionally, one adjoining site was identified and is discussed in more detail below:

Site Name: Symphony Cleaners

Site Address: 251 West 95th Street

Location: southern adjoining property

Description: This site is listed in the RCRA-SQG database with USEPA ID NYD982534547 in March 1988 for the generation of spent halogenated solvent (F002) waste. The facility is cross-listed in the Integrated Compliance Information System (ICIS) database as receiving an administrative notice of violation and listed in the US AIRS MINOR database for an enforcement action. Dry cleaning facilities are associated with the use of the chlorinated solvent tetrachloroethylene (PCE), which can readily migrate in soil and groundwater upon sub-surface releases. Because of the thirty-year history of dry cleaning operations with documented generation (with violations) of halogenated solvents on an adjoining property, the listing is considered a REC.

FINDS Database

The Facility Index System (FINDS) database contains both facility information and “pointers” to other sources that contain more detail. The Subject Property was listed in the FINDS database as: Con Edison Service Box 16581, located at 268 West 96th Street, with Registry ID 110056508444. No further environmental information was included. The listings likely correspond to Con Edison-operated utility vaults located in the sidewalk adjoining the Subject Property and referenced above as a RCRA generator. As discussed above, the listing is not considered a REC.

4.2. State Agency Database Findings

The Subject Property and/or sites within the respective minimum search areas as specified by ASTM E1527-13 were not listed in the following state agency databases: SHWS, SWF/LF, NY ENG CONTROLS, NY INST CONTROLS, VCP, SWRCY, CBS, and MOSF.

Leaking Storage Tanks Database

The LTANKS database contains an inventory of reported leaking storage tank incidents, including leaking USTs and ASTs. The minimum search area for the LTANKS database includes the Subject Property and any sites within a 1/2-mile radius. The Subject Property is not listed in the LTANKS database. Sixty-two sites within the minimum search area were listed in the database. The listed incidents were primarily caused by tank test failures, tank failures, and tank overfills, and sixty-one of the LTANKS listings have been granted closed status by the NYSDEC, indicating that NYSDEC is satisfied with spill remediation. Based on their regulatory status, these listings are not considered RECs. The remaining open LTANK incident is discussed below:

Site Name: Public School 75 Manhattan M075

Site Address: 735 West End Avenue

Location: 219 feet north-northwest of the Subject Property

Spill Number: 1301803

Spill Date: May 22, 2013

Description: This spill was reported following the discovery of No. 4 fuel oil in a tank vault containing two 7,000-gallon USTs. The remediation plan reportedly includes removal of free-phase product in the vault, excavation of contamination soil beneath the vault's concrete pad to an anticipated depth of 15 feet below slab surface, and collection of 16 post-excavation confirmation endpoint samples. Remediation of the spill is on-going. Because of the down-gradient location with respect to the Subject Property, this spill is not considered a REC.

NY SPILLS Database

The NY SPILLS database, maintained and updated by NYSDEC, is an inventory of sites where spills have been identified and reported to the NYSDEC. The Subject Property was listed in the Spills database (NYSDEC Spill No. 9601086) when a spill was reported on Lot 60 on April 22, 1996 after approximately one gallon of No. 2 fuel oil was spilled. The spill was closed on October 24, 1997. Because of the minimal volume spilled and closed regulatory status, this listing is not considered a REC.

Forty-eight spills associated with sites within the minimum search area of 1/8 mile were identified. All but one of the spills associated with the surrounding sites have been granted closed status by the NYSDEC, indicating that NYSDEC is satisfied with spill remediation, and are not considered RECs. The remaining open spill site is located over 500 feet hydraulically down-gradient of the Subject Property. Because of its distance from and hydraulic location relative to the Subject Property, this site is not considered a REC.

Brownfields Database

Brownfield sites are any real property where a contaminant is present at levels exceeding the soil cleanup objectives or other health-based or environmental standards, criteria, or guidance adopted by the NYSDEC that are applicable based on the reasonably anticipated use of the property, in accordance with applicable regulations. The Subject Property was not listed in the database; however, one listing, 267-273 West 87th Street, was identified within the minimum search area of 1/2 mile. The site is located over 2,100 feet from the Subject Property, and is therefore not considered a REC.

NY Drycleaners and EDR Historic Cleaners Databases

The NY Drycleaners database is a listing of registered dry cleaning facilities. The EDR Historic Cleaners database is a proprietary database that is a listing of potential dry cleaner facilities

based on a review of business directories. Dry cleaning facilities are associated with the use of tetrachloroethylene (PCE), a solvent that has the potential to infiltrate groundwater and can readily migrate to surrounding properties. The Subject Property was not listed in either the NY Drycleaners or EDR Historical Cleaners databases; however, 23 sites were identified within the minimum search area of 1/4 mile. Based on their lack of reported violations, status as “drop shops” that do not conduct dry cleaning operations, location hydraulically down-gradient from the Subject Property, and location over 600 feet from the Subject Property, 22 of sites are not considered RECs. Symphony Cleaners, located on the southern adjoining property, is listed as a dry cleaning plant from 1985 through 2014. As previously discussed, this facility is considered a REC.

PBS UST and AST Database

The PBS UST and AST databases contain records of registered USTs and ASTs. A registered PBS UST or AST does not constitute a REC in and of itself; however, properties listed on the UST or AST databases with a reported leak, spill, or release could constitute a REC with respect to the Subject Property. The Subject Property was not listed in either database, and adjoining sites were not listed in the UST database. Two adjoining sites were identified in the AST database, and both sites are discussed below:

Site Name: The Columbia Condominiums

Site Address: 275 West 96th Street

Location: northern-adjoining property (across West 96th Street)

Description: This site was identified in the AST database under NYSDEC PBS No. 2-217786 as housing two in-service, 20,000-gallon No. 6 fuel oil ASTs. No spills or violations are associated with the on-site tanks. Based on the lack of reported violations or spills associated with the tanks, the site is not considered a REC.

Site Name: The Williams Residence

Site Address: 720 West End Avenue

Location: southern and western-adjoining property

Description: This site was identified in the AST database as NYSDEC PBS No. 2-236810 for having one in-service, 10,000-gallon No. 4 fuel oil AST and a 550-gallon diesel fuel AST that was closed on December 1, 1984. No spills or violations are associated with the on-site tanks. Based on the lack of reported violations or spills associated with the tanks, the site is not considered a REC.

4.3. Other Database Findings

U.S. Historic Auto Stations

The U.S. Historical Auto Stations database is a proprietary database that includes records of historical auto stations compiled by EDR. The Subject Property was not listed in the U.S. Historical Auto Stations database; however three sites were identified within the minimum search area of 1/4 mile. These listings are not considered RECs because of their distance from and/or hydraulic relationship to the Subject Property.

4.4. Local Regulatory Agency Findings

FOIA Requests

FOIA requests were submitted on November 8, 2017 to the following federal, state, and local agencies via written correspondence:

- New York City Department of Environmental Protection (NYCDEP);
- New York City Department of Health (NYCDOH);
- New York City Fire Department (FDNY);
- New York State Department of Health (NYSDOH);
- NYSDEC; and
- USEPA, Region 2.

Complete responses have not yet been received. The response from the USEPA identified the Subject Property is listed in the RCRAINFO database. The listing is associated with the Lot 57 RCRA generator ID. Violations were not identified in association with this listing. Should future responses alter the conclusions of this Phase I ESA, an addendum will be issued. Copies of the FOIA requests and any responses received are included in Appendix D.

New York City Department of Buildings

Langan conducted a records search through the NYCDOB online query system on November 3, 2017. The Subject Property is identified as Block 1243, Lots 57, 59, and 60 with Building Identification Numbers (BINs) 1033709 (Lot 57), 1033710 (Lot 59), and 1033711 (Lot 60). The Subject Property has the Department of Finance classifications of U7 – Utility Bureau PR (Lot 57), K2 – Store Building (Lot 59) and O2 – Office Buildings (Lot 60). A total of 8 NYCDOB violations, 11 Environmental Control Board (ECB) violations, and 41 complaints are listed for the Subject Property. The eight open NYCDOB violations pertain to failure to file annual boiler reports (Lots 59). Two ECB violations are open and pertain to the failure to file annual boiler inspection reports (Lot 59) and failure to maintain the building (Lot 57). All other violations and

complaints have been dismissed or resolved. Certificates of Occupancy (COs) were not available for the Subject Property. A copy of the NYCDOB records is included in Appendix E.

Zoning Department

According to the New York City Planning Commission Zoning Map 5d, the Subject Property is located within a R10A residential district. A copy of the zoning map is included in Appendix F.

4.5. Physical Setting Sources

4.5.1. Topography

According to the USGS Central Park Quadrangle 7.5-minute Series Topographic Map, the Subject Property sits at an elevation of about 60 feet above msl. The surrounding area slopes gradually to the west-northwest towards the Hudson River.

4.5.2. Geology

Based on a review of the “Bedrock and Engineering Geologic Maps of Kings and Queens Counties, New York, and Parts of Bergen County, New Jersey” by Charles A. Baskerville, et al. the Subject Property is underlain by the Middle Ordovician to Lower Cambrian-Ordovician Hartland Formation, which generally consists of muscovite-biotite-quartz schist. Geological surface features (e.g., rock outcroppings) were not observed on the site.

According to the Sanitary and Topographical Map of the City and Island of New York (Viele Map) created by Egert L. Viele in 1865, the Subject Property is located within a former marshlands. The area was backfilled to accommodate development in the late 1800s. Historic fill found in urban environments typically contains ash, demolition debris, and/or municipal waste products and may contain contaminants (e.g., semivolatile organic compounds [SVOCs] or metals) at concentrations above current regulatory standards. The likely presence of historic fill at the Subject Property will require implementation of soil handling and management procedures during site redevelopment to address excavation, re-use, handling, and off-site disposal, and is therefore considered a Business Environmental Risk (BER).

4.5.3. Hydrology

Groundwater flow is typically topographically influenced, as shallow groundwater tends to originate in areas of topographic highs and flow toward areas of topographic lows, such as rivers, stream valleys, ponds, and wetlands. A broader, interconnected hydrogeologic network often governs groundwater flow at depth or in the bedrock aquifer. Groundwater depth and flow direction are also subject to hydrogeologic and anthropogenic variables such as precipitation, evaporation, extent of vegetation cover, and coverage by impervious surfaces.

Other factors influencing groundwater include depth to bedrock, the presence of artificial fill, and variability in local geology and groundwater sources or sinks. Based upon surface gradient and the location of the Hudson River, groundwater is inferred to flow toward the west-northwest.

The current Federal Emergency Management Agency (FEMA) Advisory Base Flood Elevation Maps include new advisory flood zone boundaries and advisory base flood elevations. This map indicates that the Subject Property falls within Zone X, which is determined to be outside the 0.2% annual chance floodplain.

4.6. Historical Use Information

Langan reviewed available historical resources (including aerial photographs, Sanborn® and topographic maps, and city directories) dated 1897 to 2014. Findings of the review are presented below.

4.6.1. Aerial Photographs

Langan reviewed aerial photographs of the Subject Property and surrounding areas for the years 1924, 1940, 1943, 1940, 1951, 1954, 1961, 1966, 1975, 1978, 1984, 1991, 1995, 2006, 2008, 2009, 210, and 2011. The photographs indicate that the Subject Property was located in a densely developed urban area as early as 1924. The Subject Property appears relatively unchanged in all aerial photographs. Review of the aerial photographs did not reveal any RECs associated with the Subject Property. Copies of the aerial photographs are included in Appendix G.

4.6.2. Sanborn Fire Insurance Maps

A search for historical fire insurance maps for the Subject Property and surrounding properties was conducted by EDR and reviewed by Langan. Sanborn® Maps constitute a database of prior site uses of real property for many cities and towns in the United States. Langan reviewed Sanborn® Maps for the Subject Property for the years 1902, 1912, 1922, 1928, 1951, 1976, 1979, 1980, 1982, 1983, 1985, 1986, 1988, 1989, 1992 through 1996, and 2001 through 2005. Copies of Sanborn® Maps are included in Appendix H.

Langan's review revealed that the Subject Property was located in a densely developed urban area as early as 1902. Lot 57 was occupied by a power substation (1912 - 2005); Lot 59 was operated as an upholstery store (1951 - 1976) and for public/institutional use (1979 - 2005); and Lot 60 was occupied by a single family dwelling (1902), a multi-family dwelling space (1912 - 1928), unidentified commercial entities (1951), and for public/institutional use (1979 - 2005). Undocumented releases or spills of PCBs, solvents, chemicals, or other hazardous substances associated with the operation of a power substation on Lot 57 may have adversely affected

soil, groundwater, and/or soil vapor beneath the Subject Property; therefore, historical use of the Subject Property is considered a REC.

Adjoining and surrounding properties generally housed multi-story residential, commercial, and industrial buildings. Review of the Sanborn maps did not indicate any off-site RECs.

4.6.3. Historical USGS Topographic Quadrangles

Langan reviewed historical USGS Topographic Quadrangles obtained from EDR for information regarding past uses of the Subject Property. Quadrangle maps were available for the Subject Property for the years 1897, 1898, 1900, 1947, 1956, 1966, 1979, 1997, and 2013/2014. Based on a review of the historical topographic maps, the Subject Property has been located in a moderately developed urban area since at least 1897. The topography of the Subject Property appears to change during this development. In the quadrangle from 1947, the Hudson River Parkway was shown about 1,000 feet west of the Subject Property. Review of the historical topographic quadrangles did not reveal evidence of RECs associated with the Subject Property. Copies of the topographic maps are included in Appendix I.

4.6.4. City Directories

The City Directory Abstract, obtained from EDR, is a review of available business directories, including city, cross-reference, and telephone directories, at approximately five-year intervals for the years spanning 1920 through 2014. The directory was obtained for the Subject Property and surrounding area. A copy of the City Directory Abstract report is included in Appendix J.

Businesses identified on the Subject Property include commercial and residential entities (1927 - 1963), a hand laundry (1956 - 1968), and the Salvation Army on Lot 59; various commercial entities (1927 - 1936), a dry cleaner (1950 - 1968), a dance studio (1968) and the NAACP (1978 - 1998) on Lot 60; and no listings on Lot 57. Undocumented releases or spills of solvents associated with the dry cleaning operations on the Subject Property may have adversely affected soil, groundwater and/or soil vapor beneath the Subject Property; therefore, this historical use is considered a RECs

Businesses identified at nearby properties include a medical laboratory (1938-1968) and dry cleaner (2000) on the northern-adjointing property across West 96th Street. Undocumented releases or spills of petroleum products, solvents, chemicals, or other hazardous substances associated with the operations of this adjoining property may have adversely affected groundwater and/or soil vapor beneath the Subject Property; therefore, these historical uses are considered RECs.

4.6.5. Environmental Lien Search

Langan contracted EDR to conduct an environmental lien search for the Subject Property. The result of the search, which included a compilation of available data and verification of the findings with the appropriate regulatory authorities, revealed that there are no environmental liens or other Activity and Use Limitations (AUL) associated with the Subject Property. A copy of the Environmental Lien Search is included in Appendix K.

5.0 SITE RECONNAISSANCE

The site reconnaissance was conducted in a systematic manner focusing on the spatial extent of the Subject Property and progressing to the adjoining and surrounding properties. The assessment of the adjoining and surrounding properties was limited to identifying, if possible, any indications of past or current use that may involve the use, storage, disposal, or generation of hazardous substances or petroleum products; noting the general type of current use; the general topography of the surrounding area; and providing a general description of adjoining or surrounding structures.

The site reconnaissance was performed at 10:00 AM on December 7, 2017, by Kimberly Del Col of Langan. During the site reconnaissance, Ms. Del Col was accompanied by Mr. Harold Fetner and Mr. Damon Pazzaglini, the Users; Mr. James Edgeworth, a representative of the New York City Housing Preservation and Development (HPD); and Mr. Steven Bodden and Mr. Len Jacobs, representatives of the Salvation Army. The weather at the time of the inspection was sunny and approximately 40 degrees Fahrenheit (°F).

5.1. General Site Setting and Reconnaissance Observations

The Subject Property is situated on a 10,700-square-foot parcel made up of three tax lots. Lot 57 is improved with a three-story vacant building with a cellar level and is owned by the New York city HPD. Lots 59 and 60 are improved with two-story commercial buildings with full cellar levels and rear patios.

Lot 57 building is currently vacant but most recently operated as a power substation for the New York City MTA. At the time of the site reconnaissance, the cellar level appeared flooded with water and the stairwell into the cellar was in poor condition due to water damage (i.e., partially and fully missing stairs). The first floor of the building appeared vacant; however, a full inspection could not be completed due to potentially unsafe conditions related to the structural stability of the first floor and stairwell leading to the second floor in the building. Miscellaneous domestic refuse was stockpiled in the northwestern corner of the first floor of the building.

The Lot 59 building is operated by the Salvation Army. The cellar level of the building was inaccessible at the time of inspection. The first and second floors contain commercial space, office space and bathrooms. An exterior patio located behind the building is accessible from the first floor. Heating, ventilation, and air conditioning (HVAC) equipment is located on the roof, which is accessible by a stairwell located on the southern exterior of the building.

The Lot 60 building is used as office space. The cellar level of the building contains storage space, a boiler room, a meeting space, bathrooms, and a kitchenette. Two in-service 275-gallon ASTs were observed in the storage space in the cellar. An exterior patio located behind the building is accessible from the cellar level. The first and second floors contain offices, pantries,

bathrooms and storage space. HVAC equipment is located on the roof and is accessible by a hatch door located on the ceiling of the second floor hallway.

5.2. Pits, Ponds, Lagoons

Langan did not observe pits, ponds, or lagoons on the Subject Property.

5.3. Pools of Liquid

About three inches of standing water were observed in the cellar of the Lot 57 building. Pools of liquid were not observed in the remaining two buildings.

5.4. Storm Drains, Wells, and Cisterns

Floor drains were observed in the rear patio areas of the Lot 59 and 60 buildings. The discharge point of the drains could not be confirmed. Staining was not observed in the vicinity of the drains. Wells and cisterns were not observed on the Subject Property.

5.5. Transformers and Other Suspect Equipment

Transformers and other suspect equipment were not observed on the Subject Property.

5.6. Storage Containers, Drums, and Chemical Storage Areas

Three less-than-one-gallon containers of domestic cleaning agents were observed on the ground floor of the buildings on Lots 59 and 60. Five less-than-one-gallon containers of domestic cleaning agents and one can of spray paint were observed in the second floor storage space of the building on Lot 60. Cleaning agents were neatly stored and no evidence of leaks were observed. Chemical storage areas and drums were not observed on the Subject Property.

5.7. Sewage Ejector Pits and Sumps

Sewage ejector pits and sumps were not observed on the Subject Property.

5.8. Waste Generation, Storage, and Disposal

Plastic trash cans containing household refuse were observed on the first and second floors of the Lots 59 and 60 buildings.

5.9. Air Emissions or Wastewater Discharges

Sources of air emissions or wastewater discharge from the Subject Property were not observed.

5.10. USTs or ASTs

Two active 275-gallon No.2 fuel oil ASTs were observed in the cellar of the Lot 60 building. A fill port and vent pipe were observed on the sidewalk adjacent to the building, and boiler inspection notices were observed on the wall of the adjacent boiler room. The ASTs and flooring in the vicinity of the ASTs appeared to be in good condition with no indications of a release to the subsurface.

The cellar of the Lot 59 building was not accessible during the site reconnaissance; however, Mr. Jacobs, an employee of the Salvation Army, indicated that a boiler room and tank are located in the cellar. Additionally, closed NYSDEC Spill No. 9601086 is associated with the filling of a fuel oil tank in the Lot 59 cellar. The inability to access and inspect the tank in the Lot 59 cellar is considered a data gap.

5.11. Monitoring Wells or Remedial Activities

Monitoring wells and/or evidence of remedial activities were not observed on the Subject Property.

5.12. Stained or Discolored Soil

Stained or discolored soil was not observed on the Subject Property.

5.13. Leachate or Seeps

Evidence of leachate or seeps was not observed on the Subject Property.

5.14. Adjoining and Surrounding Property Uses

The Subject Property is bound by West 96th Street followed by two multi-story residential buildings to the north; a two-story commercial building followed by Broadway to the east; multi-story mixed-use commercial/residential buildings followed by West 95th Street to the south; and a multi-story residential building followed by West End Avenue to the west. The aforementioned dry cleaner located on the southern adjoining property was observed during the site reconnaissance, and is considered a REC.

6.0 INTERVIEWS

6.1. Site Owners/Occupants

Mr. James Edgeworth, an employee of the New York City HPD, stated that the building cellar is frequently flooded with between three inches to two feet of water. Mr. Edgeworth also stated that he did not have knowledge of any tanks located in the cellar of the building and was unaware of any previous environmental investigations.

Mr. Len Jacobs, an employee of the Salvation Army, stated that the boiler room, mechanical room and fuel oil tank are located in the cellar of the Lot 59 building. Mr. Jacobs could not confirm the size or type of fuel storage tank, and whether or not the tank was still in-service.

6.2. Owners/Tenants of Adjoining Properties

Owners/tenants of adjoining properties were not interviewed as part of this Phase I ESA.

7.0 ADDITIONAL SERVICES

7.1. Radon

Radon is a colorless, odorless radioactive gas that results from the natural breakdown of uranium minerals in soil, rock, and water, which subsequently enters the atmosphere. It can concentrate in buildings, entering through cracks and other penetrations of a building foundation. Some areas are more likely to have elevated concentrations of radon than others, reflecting subsurface lithological conditions.

The USEPA has established a recommended radon action level of 4.0 pico Curies per liter (pCi/L). According to the USEPA Radon Zone Map, the Subject Property is located in Zone 3, which indicates a predicted average indoor radon screening level less than 2 pCi/L. The NYSDOH maintains a database of radon test results on a local and county level. According to the NYSDOH, 121 radon tests have been conducted in basements in Manhattan, New York with results indicating that about 10 percent of basements have radon concentrations above the USEPA action level of 4 pCi/L. Based on this information, it is unlikely that elevated levels of radon gas are present at the Subject Property.

7.2. ACM, LBP, and PCBs

A formal survey to identify asbestos-containing material (ACM), lead based paint (LBP), and polychlorinated biphenyl (PCB)-containing material was not conducted as part of this Phase I ESA. Due to the age of the on-site buildings, ACM, LBP and PCB-containing materials may be present.

8.0 DEVIATIONS AND DATA GAPS

8.1. Deviations

Langan performed a Phase I ESA of the Subject Property using a standard of good commercial and customary practice that is consistent with the ASTM E1527-13 and the 40 CFR Part 312 Standards and Practices for AAI. Significant deviations were not made to the above referenced standards.

8.2. Data Gaps

In order to address data gaps, additional sources of information may be consulted. According to AAI, Section 312.20 (g), "to the extent there are data gaps (as defined in section 312.10) in the information developed...that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases...such persons should identify such data gaps, identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps." According to ASTM E1527-13, Section 8.3.2.3, "historical research is complete when either: (1) the objectives in 8.3.1 through 8.3.2.2 are achieved; or (2) data failure is encountered. Data failure occurs when all standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. If data failure is encountered, the report shall document the failure and, if any of the standard historical sources were excluded, give the reasons for the exclusion."

The following data gaps were identified:

- Complete responses to FOIA letters have not been received from federal, state, and local agencies
- The Lot 57 cellar could not be accessed due to damaged flooring and stairwells and pooled water
- The Lot 59 cellar, including the boiler room and fuel storage tank area, were inaccessible.

With the exception of Lot 59, Sufficient information was provided from other sources to enable conclusions regarding RECs at the Subject Property. As such, these data gaps are not expected to alter the results of the Phase I ESA. If information becomes available that alters the conclusions of this report, an addendum will be issued.

9.0 FINDINGS, OPINIONS, AND CONCLUSIONS

This Phase I ESA was conducted in accordance with ASTM E1527-13 and the USEPA AAI Rule. The objective of this Phase I ESA was to identify the presence or likely presence, use, or release on the Subject Property of hazardous substances or petroleum products as defined in ASTM E1527-13 as a REC.

Based on information obtained during the visual inspection of the Subject Property; review of environmental databases and historic information; and contact with federal, state, and local agencies; one on-site REC, one off-site REC, one BER, one HREC, and one non-ASTM consideration were identified for the Subject Property. De minimis conditions, HRECs and CRECs were not identified.

RECs

REC 1 – Historical Site Operations

Historical operations on the Subject Property included a power substation (1912 - 2005) on Lot 57 and a dry cleaning facility (1950 - 1968) on Lot 60. Undocumented spills or releases of solvents, chemicals, and/or other hazardous substances associated with these uses may have adversely affected soil, groundwater, and/or soil vapor beneath the Subject Property.

REC 2 – Historical and Current Use of Adjoining Properties

Historical use of the adjoining properties include a dry cleaner (2000) and a medical laboratory (1938 - 1968) to the north of the Subject Property, and a dry cleaner (1985 – present) with a Resource Conservation and Recovery Act (RCRA) generator listing (1998) to the south of the Subject Property. These uses may have resulted in inadvertent releases of solvents, chemicals, and/or other hazardous substances that may have affected soil vapor or groundwater beneath the Subject Property.

BER

The Subject Property is located within a former marshland that was backfilled to accommodate development in the late 1800s. Historic fill found in urban environments typically contains ash, demolition debris, and/or municipal waste products and may contain contaminants (e.g., semivolatile organic compounds [SVOCs] or metals) at concentrations above current regulatory standards and at hazardous concentrations. The likely presence of historic fill material will require implementation of soil handling and management procedures during site redevelopment to address excavation, re-use, handling, and off-site disposal.

Non-ASTM Environmental Considerations

The buildings were constructed circa 1904 (Lot 57) and circa 1910 (Lots 59 and 60), potentially with asbestos-containing materials (ACM), lead based paint (LBP), or polychlorinated biphenyls (PCB)-containing materials. An intrusive survey to identify ACM, LBP and PCB-containing material was not conducted as part of this Phase I ESA.

11.0 STATEMENT OF QUALIFICATIONS AND SIGNATURES

Langan declares that, to the best of its professional knowledge and belief, the personnel who performed this Phase I ESA meet the definition of Environmental Professional as defined in Subsection 312-10 of 40 CFR 312 and that they have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. They have developed and performed the AAls in conformance with the standards and practices set forth in 40 CFR Part 312. Resumes outlining the qualifications of the Environmental Professionals who performed this Phase I ESA are included in Appendix M.

Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

ASTM PRACTICE E 1527-13: USER/CLIENT QUESTIONNAIRE

Please complete the below form and return to
Langan Engineering, Environmental, Surveying and Landscape Architecture, D.P.C.

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the User must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The User is defined as the party seeking to use Practice E1527 to complete an environmental site assessment of the property. A User may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. These inquiries must also be conducted by the EPA Brownfield Assessment and Characterization grantees. The User should provide the following information to the environmental professional. Failure to conduct these inquiries could result in a determination that "all appropriate inquiries" is not complete.

General Information

User/Client Name (s): Fetner Properties

Property Name: _____

Address: 266-270 West 96th St.

Property Type: Residential / Commercial

Type of Property Transaction:

- Purchase of property
- Financing of property
- Sale of property
- Ground Lease
- Build to Suit Lease
- Other _____

Reason Why Phase I ESA is required: _____

Site Contact (s): _____

Required Information

The citation at the end of each item (e.g. 40 CFR 312.XX) is the section of EPA's November 1, 2005 AAI Final Rule which discusses that item.

LANGAN

<p>(1.) Environmental liens that are filed or recorded against the property (40 CFR 312.25). Did a search of recorded land title records (or judicial records, where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?</p>	<p>Yes <input type="checkbox"/></p>	<p>No <input checked="" type="checkbox"/></p>
<p>Note 1 – In certain jurisdictions, federal, tribal, state or local statutes or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.</p>		
<p>(2.) Activity and use limitations that are in place on the property or that have been filed or recorded against the property (40 CFR 312.26(a)(1)(v) and (vi)). Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law?</p>	<p>Yes <input type="checkbox"/></p>	<p>No <input checked="" type="checkbox"/></p>
<p>(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28). Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?</p>	<p>Yes <input type="checkbox"/></p>	<p>No <input checked="" type="checkbox"/></p>
<p>(4.) Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29). (a.) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? [If no, proceed to Part 5.] (b.) If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property?</p>	<p>Yes <input checked="" type="checkbox"/> <input type="checkbox"/></p>	<p>No <input type="checkbox"/> <input checked="" type="checkbox"/></p>
<p>(5.) Commonly known or reasonably known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user, (a.) Do you know the past uses of the property? (b.) Do you know of specific chemicals that are present or once were present at the property? (c.) Do you know of spills or other chemical releases that have taken place at the property? (d.) Do you know of any environmental cleanups that have taken place at the property?</p>	<p>Yes <input type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/> <input checked="" type="checkbox"/></p>	<p>No <input checked="" type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/> <input type="checkbox"/></p>
<p>(6.) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31). Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property?</p>	<p>Yes <input type="checkbox"/></p>	<p>No <input checked="" type="checkbox"/></p>

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

266-270 WEST 96TH STREET
NEW YORK, NY 10025

COORDINATES

Latitude (North): 40.7947520 - 40° 47' 41.10"
Longitude (West): 73.9727870 - 73° 58' 22.03"
Universal Transverse Mercator: Zone 18
UTM X (Meters): 586660.6
UTM Y (Meters): 4516269.0
Elevation: 60 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 05/30/2017 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<i>HUDSON RIVER PCBS</i>	<i>NO STREET APPLICABLE</i>	<i>WNW 1/4 - 1/2 (0.269 mi.)</i>	<i>0</i>	<i>11</i>

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/11/2017 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are

EXECUTIVE SUMMARY

11 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 4 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 11 RCRA-CESQG sites within approximately 0.25 miles of the target property.

Federal institutional controls / engineering controls registries

US ENG CONTROLS: A listing of sites with engineering controls in place.

A review of the US ENG CONTROLS list, as provided by EDR, and dated 08/10/2017 has revealed that there is 1 US ENG CONTROLS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
HUDSON RIVER PCBS	NO STREET APPLICABLE	WNW 1/4 - 1/2 (0.269 mi.)	0	11

US INST CONTROL: A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

A review of the US INST CONTROL list, as provided by EDR, and dated 08/10/2017 has revealed that there is 1 US INST CONTROL site within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 08/15/2017 has revealed that there are 62 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 16 NY UST sites within approximately 0.25 miles of the target property.

State and tribal Brownfields sites

NY BROWNFIELDS: Brownfields Site List

A review of the NY BROWNFIELDS list, as provided by EDR, and dated 08/15/2017 has revealed that there is 1 NY BROWNFIELDS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
267-273 WEST 87TH ST Site Code: 507420	267-273 WEST 87TH ST	SSW 1/4 - 1/2 (0.408 mi.)	484	1068

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/15/2017 has revealed that there are 48 NY Spills sites within approximately 0.125 miles of the target property.

spillno: 0509701				
Site ID: 355508				

NY SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the NY SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there is 1 NY SPILLS 90 site within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 89 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

323 ASSOCIATES INC	323 W 96TH ST	NW 0 - 1/8 (0.098 mi.)	I123	291

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 11 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at listing September 1983): The Hudson River PCBs Site is a 40-mile stretch of the Hudson River between Mechanicville and Fort Edward, New York. General Electric Co. discharged an estimated 1.1 million pounds of PCBs into this stretch of river. The State has identified 40 hot spots, defined as sediments contaminated with greater than 50 parts per million (ppm) of PCBs. Also included in the site are five remnant areas, which are river sediments exposed when the level of the river was lowered due to removal of the Fort Edward Dam. The State has taken initial measures to stabilize the remnant areas from erosion. In September 1980, Congress passed an amendment to the Clean Water Act (CWA) that included the Hudson River PCB

Reclamation Demonstration Project. Under this legislation, the EPA Administrator could authorize a 75 percent grant, not to exceed 20 million. EPA issued a final Environmental Impact Statement in October 1982 evaluating various dredging alternatives for a demonstration project. EPA has prepared a feasibility study to evaluate alternative remedial actions under CERCLA. The Administrator has determined that CERCLA funds may be used for remedial action at the remnant areas and for evaluating the effectiveness of the water supply system at Waterford, New York. Status June 1984): EPA has completed a draft feasibility study identifying alternatives for remedial action. A search for parties potentially responsible for wastes associated with the site has been completed, and EPA has sent letters to two potentially responsible parties notifying them of possible legal action under CERCLA.

Site Description: The Hudson River PCBs Site includes a nearly 200 river-mile stretch of the Hudson River in eastern New York State from the Village of Hudson Falls to the Battery in New York City. The Hudson River has been designated an American Heritage River because of its important role in American history and culture. This federal Superfund Record of Decision (ROD) addresses the risks to people and ecological receptors associated with polychlorinated biphenyls (PCBs) in the in-place sediments of the Upper Hudson River. The Site is divided into the Upper Hudson River which is the length of river between Hudson Falls and the Federal Dam at Troy, New York and the Lower Hudson River which is the length of river between Federal Dam at Troy and the Battery. For purposes of this project, EPA further divided the Upper Hudson River area into three main sections known as River Section 1, River Section 2, and River Section 3. The Site also includes five Remnant Deposits, which are areas of PCB-contaminated sediment that became exposed after the river water level dropped following removal of the Fort Edward Dam in 1973. The Upper Hudson River portion of the Site extends from the Fenimore Bridge in Hudson Falls to the Federal Dam at Troy, a distance of just over 43 river miles. The Lower Hudson River extends from the Federal Dam to the southern tip of Manhattan at the Battery in New York City. The Mid-Hudson River, which is primarily a subset of the Lower Hudson River, extends from the Federal Dam at Troy to just south of Poughkeepsie. The predominant sources of PCB contamination to the Upper Hudson River were two capacitor manufacturing plants owned and operated by GE. The plants are located adjacent to or near the Hudson River in the Village of Hudson Falls and the Town of Fort Edward. Over a 30-year period, the plants discharged a substantial amount of PCBs into the river. At the GE Hudson Falls plant, leakage of non-aqueous phase PCB-bearing oils through bedrock to the river continues to be a source of PCB contamination. Regarding the former

1000384273

outfall to the Hudson River from the GE Fort Edward plant, New York State Department of Environmental Conservation (NYSDEC) issued a Record of Decision in January 2000 that calls for the excavation of PCB-contaminated soil and sediment in this area of the Upper Hudson River shoreline in order to eliminate this source of PCBs to the river. EPA's analysis assumes a significantly reduced PCB loading to the river from these sources once the State's plans for remediation are implemented. PCBs, the chemicals of concern addressed in this decision document, have been classified by EPA as probable human carcinogens. They are also linked to other serious non-cancer adverse health effects based on observations in animals and emerging evidence in humans. Once discharged from the GE plants, the PCBs adhered to river sediment and accumulated downstream as they settled in impounded pools and other depositional areas. Historic fish and sediment data indicated PCBs were accumulating downstream of the old Fort Edward Dam as well as accumulating behind the dam. The removal of the dam in 1973 resulted in a remobilization and downstream distribution of PCBs that had accumulated behind the dam. Historically, the highest PCB sediment concentrations have been detected in the cohesive sediments within the Upper Hudson River. River scouring/erosion and other mechanisms have mobilized PCB-contaminated sediments from the extensive cohesive deposits, redepositing them farther downstream all the way to the Battery. The preponderance of data indicates that burial of contaminated sediment by cleaner materials is not universally or uniformly occurring. Data also indicate that contaminated sediments in River Sections 1, 2 and 3 continue to serve as the major source of PCBs to the water column and the fish within the Upper Hudson River. During an approximate 30-year period ending in 1977, PCBs were used in capacitor manufacturing operations Hudson Falls and Fort Edward, New York facilities. PCB oils were discharged both directly and indirectly from these plants into the Hudson River. This included both non-permitted and permitted discharges. Even after permits were received in 1975, permit exceedances occurred. Estimates of the total quantity of PCBs discharged directly from the two plants into the river from the 1940s to 1977 are as high as 1,330,000 pounds (about 605,000 kg). Many of the PCBs discharged to the river adhered to sediments and accumulated with the sediments as they settled in the impounded pool behind the Fort Edward Dam, as well as other depositional areas farther downstream. Because of its deteriorating condition, the Fort Edward Dam was removed in 1973. Five areas of PCB-contaminated sediments were exposed due to the lowering of the river water level when the Fort Edward Dam was removed. These five areas are known as the Remnant Deposits. During subsequent floods, PCB-contaminated sediments from the Fort Edward Dam area were scoured and transported downstream. EPA notified the company that had the two plants of the remedy selected in the 1984 ROD and offered the company the opportunity to implement the selected remedy with respect to the Remnant Deposits and the Waterford drinking water supply evaluation. The company declined EPA's offer. NYSDEC, with funding provided by EPA, conducted the evaluation at the Waterford Water Works. In addition, NYSDEC prepared a design for the in-place containment of the Remnant Deposits. This design was completed in 1988. In March 1989, the company offered to assume responsibility for the implementation of the in-place containment remedy for the Remnant Deposits. EPA issued a September 27, 1989 Administrative Order on Consent to the company which required the company to prepare a remedial design report for the construction of access roads to the Remnant Deposits and to submit a design for the in-place containment of the Remnant Deposits incorporating the NYSDEC-prepared design, plus any EPA-approved refinements to that design. EPA also issued a September 27, 1989 Administrative Order to the company requiring the company to construct and maintain the access roads to the Remnant Deposits. The company constructed the in-place containment of the Remnant Deposits under a 1990 Consent Decree with EPA. EPA will evaluate the

need for further remedial action for the Remnant Deposits after completion of a 5-year review of the Remnant Deposit containment remedy, performed pursuant to CERCLA §121(c). The company's manufacturing plants in Hudson Falls and Fort Edward are listed under the New York State Inactive Hazardous Waste Disposal Sites Remedial program. The company currently is conducting remedial activities near the Hudson Falls and Fort Edward plants pursuant to Orders on Consent with NYSDEC. The company has thus far declined to implement the January 2000 NYSDEC Record of Decision for the Fort Edward plant Outfall 004. The NYSDEC is conducting the remedial design for that ROD. As one of America's great rivers, the Hudson has played and will continue to play a major role in the history, culture, and economy of the area. The Hudson has been designated an American Heritage River because of its important role in American history and culture. Current and reasonably-anticipated future land use and surface water use are described below. Current land use includes a variety of residential, commercial and industrial activities. Use of the river and lands surrounding the river are projected to remain the same. At this time, no changes in future land use are known, nor are any new uses expected. The Site passes through 14 different counties as the river flows to its final discharge point in New York Harbor. Four counties (Albany, Washington, Rensselaer, and Saratoga) lie adjacent to the more highly contaminated portions (areas of proposed active remediation in River Sections 1, 2 and 3) of the Upper Hudson River between Troy (Federal Dam) and Hudson Falls. Within these four counties, forests and farmlands surround urban centers and historic villages. There are apple orchards and dairy farms, parks, nature preserves and gardens. In addition to the GE Hudson Falls and Fort Edward plants, the area is home to technology companies, oil service companies and food companies. Saratoga and Washington Counties have experienced population growth between 1990 and 1999 of 10.2 percent and 1.4 percent, respectively, while Rensselaer and Albany Counties have experienced population declines of 1.9 percent and 0.3 percent, respectively. Total population of these four counties, according to July 1999 estimates by the US Department of Commerce Bureau of the Census, is just under 700,000. Warren County, in which the City of Glens Falls is located, has a population of just over 60,000 and is just to the northwest of the Hudson River PCBs Site. A Record of Decision (ROD) addressing operable unit 1 (OU 01) was completed in September 1984. A Record of Decision addressing OU 2 was completed in February 2002.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Remarks: onto the floor at the bedroom in this apartment. Branch Restoration completed the remedial work and CIST performed the mercury vapor air sampling and surface resting. The analytical mercury results were reviewed by the NYCDOH. The NYCDOH performed an inspection resulting in No Cause of action. Spill Closed. "
 "Small amount of mercury from a barometer. Caller would like a callback on cleanup ASAP."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Sangesland spoke to Michael (property manager). He said there was a minor leak from a fitting from the fill line to the 20,000 gal #6 oil tank. Approx 1 gal of #6 oil on the floor of the tank vault. He will call back later with the name of the contractor who will do the cleanup. 10/31/2008-HRAHMED-Property manager Michael Zerka (212 749 5248) called to update. They have two 20,000 gal AST vaulted. They found some oil spill on the floor of the vault due to a leak on top of the floor near the feeding area of the pipe. PTC will fix the problem. Michael will send all the documentation regarding the fix.

Contact Phone: (201) 489-5100
DEC Memo: "10/30/2007 Sangesland spoke to Jay Halbert at Hess. The Hess crew visited the site. The pipe failed in the sidewalk between the curb fill and the basement wall. Building Super: Efram 212-666-1661 Prop Mgt: 212-749-5248 Building Front Desk (doorman) 212-666-0476 Voice messages were left with Super and Prop Mgt. 11/2/2007 Sangesland spoke with Efram Lopez (Super) He said they were going to hire a contractor (PTC or Eastmond???) to dig out the line, remove contaminated soil, take endpoint samples, lay in new line, repour cement sidewalk. Sangesland asked super to have the contractor call DEC before work begins. 6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A. 9/29/10 - Raphael Ketani. The spill occurred on 10/30/07 and involved a leak from the fill line which runs under the sidewalk. 60 gals. of #6 oil was released. Allegedly it was cleaned up. Jay Halbet of Hess (201) 489-5100 was the contact for the cleanup. The site is block and lot 1868 and 1010 at 275 West 96 Street, Manahattan. The PBS is #2-217786. There are two active 20,000 gal. tanks with #6 oil. The mail contact is Bluewoods Management Inc., 5701 Arlington Avenue, Riverdale, NY, 10471, Donald Wilson, (718) 549-7036. The owner is Columbia Condominiums, c/o Bluewoods Management, (212) 749-5248. There are no E-docs and no paper case file. I contacted the management company (212) 749-5248, but could only leave a voice message. 12/2/10 - Raphael Ketani. I spoke to Michael Zerka (212) 749-5248, the property manager. I told him that the DEC never received documentation showing that the spill had been cleaned up. He said that the spill was actually very small. It consisted of a release inside the building that accumulated on the floor during a fill up. I told Mr. Zerka to send the DEC the necessary documentation. He said that he will. 3/1/11 - Raphael Ketani. I contacted Mr. Zerka (212) 749-5248. I told him that the DEC still hasn't received the investigation and remediation report. He said that he will send it by e-mail. 3/15/11 - Raphael Ketani. As there has been no response from Mr. Zerka, I sent a CSL to him concerning the site. 3/21/11 - Raphael Ketani. The CSL was returned unopened. It had a post office label Forwarding Time Expired - Return to Sender. 3/24/11 - Raphael Ketani. I called up Mr. Zerka (212) 749-5248 and asked him where to send the CSL. He said that it should be sent to the 275 West 96th Street address, 10025. I resent the CSL. 6/6/11 - Raphael Ketani. I contacted Jay Halbet of Hess (201) 489-5100 and told him that the DEC never received the cleanup report. Mr. Halbet said that he will look into the matter and get back to me. I tried to contact Mr. Zerka (212) 749-5248, but could only leave a message. As I could not reach Mr. Zerka, I sent a strongly worded letter to

S109373124

Bluewoods Management at Columbia Condominiums. I set a deadline of July 8 for receipt of the remediation report. A little while later, Mr. Zerka called. He said that A.L. Eastmond had done the remediation. I told him it didn't matter who did the remediation, but that the DEC was still going to hold Columbia as the responsible party and that Columbia owed us the report. Mr. Zerka said that he had just talked to Lizette Hernandez of Eastmond and told her to send the report to the DEC immediately. I told him that this was fine, but that I was still going to send out the followup letter. He said that was alright. 6/8/11 - Raphael Ketani. I spoke to Ms. Hernandez. She said that she will look into the paperwork and either send the DEC the report or put one together. 7/6/11 - Raphael Ketani. Ms. Hernandez (718) 378-3000 called. We discussed the spill case. She read some of the notes in the Eastmond file for the spill. Four sidewalk flags had been removed in order to dig out the soil. She said that end point samples were never taken. I told her that since so many flags had been removed, the spill must have been fairly large. Therefore, I told her that the DEC will require end point sampling. She asked for an extension of the deadline so that the sampling could be performed and the results received. I gave her until August 12 to send the DEC the sampling results. She said that sounded fine. 8/12/11 - Raphael Ketani. I contacted Mike Hummel (718) 378-3000 regarding the closure report. He passed my message onto Neal Tomasetti of Eastmond. I spoke to Mr. Tomasetti. He said that he expected to get the soil analyticals soon and added that the DEC will get the closure report sometime next week. 9/13/11 - Raphael Ketani. I tried to contact Mr. Tomasetti (718) 378-3000 (Neal) regarding the soil analyticals, but I could only leave a message. Mr. Tomasetti called me back. He said that he hadn't forgotten about the spill case. However, the previous Eastmond case manager had left the information for the site investigation in many places. So he is still trying to put it all together. 10/20/11 - Raphael Ketani. I spoke to Mr. Tomasetti. He said that he hadn't forgotten about sending the DEC the investigation and cleanup reports. However, he said, he is the only one who knows what to do, and he is getting more spill cases all of the time and he is also trying to run his company and make money. He said that he will try to send the reports sometime next week. 11/17/11 - Raphael Ketani. Mr. Tomasetti sent the remediation report by FAX. I reviewed the report. The report included a drawing showing where the end point samples had been taken, a manifest for the disposed soil and the analytical data report. Each end point sample was essentially non-detect for VOCs, but had many mostly very low SVOC hits. Based upon the information in the 11/17/11 remediation report and the information in the database, I have determined that the residual contamination is not a threat to the public or the environment. Therefore, I have closed the spill case. "

DEC Memo: "e2mis no. 155604: On 9/30 @ 04:30 H Muniz # 16825 of FOD discovered

1 pint of an unknown oil in the structure. He was making a duct search for an L.E.C.. Feeder 17 M 94. The source and cause are unknown. The spill is in the concrete structure. The spill is actually a wet spot that will not migrate. Environmental tag # 41315 was hung. Two Wipe samples will be taken of the spill for PCB and ID. No initial cleanup action is to be taken at this time. Lab Sequence Number: 04-07822-001: Analysis indicates the presence of a cable oil. Lab Sequence Number: 04-07821-001: PCBs < 1 ppm 10/1 @ 00:30 Received a call from H Muniz # 16825 of FOD and he informed me the cleanup completed as of 21:30. Absorbent aand degreaser was used to soak up spill and clean the affected area and shoveld up in a bag for disposal. There were no liquids that were removed. The Environmental tag # 41315 was removed. There was no visible sign of the source of the spill."

Remarks: "1 PINT UNKNOWN OIL IN MANHOLE. CLEAN UP PENDING. CON ED REF #155604."

DEC Memo: "6/25/13- ttf letter sent 3/3/14- DECPiper left message for Munendra Sharma regarding TTF and expired registration. 2/12/15- DEC Piper sent Munendra an email requesting info regarding repairs and retest. 03-18-2015 - V. Brevdo This TTF Spill Case is transferred to Remediation Section B as per discussion with Chief of Spill Response on 03-17-2015. Case is further assigned to Mr. Alexander Zhitomirsky as Project Manager. - VB 2-1-2017 I have contacted Becky Kinal (AKRF 914-922-2362). AKRF is working on the spill for School Construction Authority. Contractors will remove two 7,000k galloons #4 oil USTs. The oil in the tank vault. They broke the vault's floor and found a void underneath the vault's floor. There is another concrete pad underneath the void. I requested that the free phase has to be fully pumped from the vault. The vault must be fully cleaned. Both vaults should be removed and contaminated soil excavated. Post excavation sampling must be performed. The excavation will be 15' deep. The excavation will be approximately 36'x34'. 16 post excavation samples should taken and analyzed for VOCs and SVOCs. If groundwater is encountered it should be sampled and tested. Fill ports and lines should be excavated, if feasible and soil samples should be collected. AZ 7-14-17 Contacted Becky Kinal AKRF (914-922-2362) and Paul Sherwood (516-526-8041 NYC School Construction Authority). They have removed the tank and pumped out free product from the vault. They broke the vault and both pads. They excavated down to what appears to be bedrock. They will continue the excavation to the east but they can not continue to the west, north and south due to utilities and structures. GW sample will be taken. Post-excavation samples will be taken. After the excavation is completed, three permanent groundwater monitoring wells will be installed. AZ "

 DEC Memo: "7/8/14-Zhune spoke to David Lopez (Superintendent) 917-855-2005. He said Castle oil delivered oil in the afternoon. The tank had a patch and the oil came out of the patch. Approximately 50 galloons of fuel oil #2 went to the concrete floor of the tank room. The spill is contained in the tank room. No drains and no soil impacted. No vapors complaint. Riteway is cleaning the spill. 7/11/14-David Chan sent the following email. it was a defective product level gauge that caused an overfill. The overfill discharged at the vent, a small amount was also discharged through an old epoxy cut on the tank. The discharge at the epoxy cut was cleaned up by Riteway. There was very little oil that leaked from the cut. It was wiped up with a few rags that did not warrant a drum. The rags were disposed along with the men's personal protection equipment, back at our company. Outside remediation was performed by Castle Oil. Riteway will be returning tomorrow to clean the tank and weld the epoxy cut. 9/26/14-David Chan emailed the spill closure letter and waste manifest, dated 8/8/14 On July 8,2014 Riteway Tank Maintenance Corp. was contacts to address an overfill of the 5,000 gallons tank at the above referenced property. The tank is an aboveground tank on saddles situated in a tank room on top of a sound concrete floor. When Riteway arrived, it was observed

that the oil had discharge from the vent (outside) and an old epoxy cut (inside). Castle Oil has already cleaned up the outside discharge. Riteway proceeded to clean the discharge inside the tank room. All loose product was vacuumed up and affected areas were scrubbed and washed with bio-degradable degreaser. A total of 85 gallons of liquid material was disposed of. Riteway returned on July 12, 2014; cut opened and pumped and cleaned the tank at the above referenced location. The older epoxy cut was removed and the tank was welded shut as required by law. The tank room is clean and free from contamination. 9/26/14-Zhune spoke to Don Wilson property manager of the building. He said he is satisfied with the cleanup. The tank is back in service. They are using #2 fuel oil now. Spill Closed." "spill to tank room/clean up pending"

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was SAWYER Reassigned from O'Dowd to Rommel 05/02/00. 10/3/01: On this date, K. Goertz performed site inspection. The elevator shaft and sump pump were free of oil. Based on this inspection, and the soil/gw results submitted to date, no further action is needed. This spill is now closed. (KG) 11/20/2003 Sangesland spoke with Martha Goupit (management agent for this property) 212-207-1809 / cell REOPENED 11/20/2003 FOR OIL IN SUMP PUMP. 6/7/07-Matthew Klaas (Albany DER) -Called Sherry Franco of EndRun Realty Corp. at 212-207-1815. She was not in her office so i left her a voice mail explaining the purpose of my call and asking her to please call me back at her earliest convenience. 6/13/07-Matthew Klaas (Albany DER) -Wrote letters to End Run Realty Corp, and Impact Environmental (site consultant) requesting report of further action suggested by Impact Environmental. 7/22/08 - Sue Lasdin (Albany DER) Based on review of our records, no further investigation or response will be required concerning this Spill. The Subsurface Investigation Report, prepared by P.W. Grosser, Consulting, Inc., September 2007, substantially demonstrates that the oil observed at this site is related to an

DEC Memo: "During a routine call to Con Ed regarding an EMIS report on a minor fuel oil spill, the ERT Hotline (Tim Regan) noted that he was working on updating the EMIS for the feeder leak as well. Noting that Region 2 Spills had not received any feeder leak reports, I asked what feeder leak . Tim referenced closed spill 104492 (Region 3 Spill closed by Joe McCarthy-cc'd above). Joe's closure notes were as follows: Spoke with Paul Walsh at Con Ed. He says that they have been out tracking release area of lihe and believe they have isolated the area of the problem but are continuing to investigate. It is isolated to areas in Region 2, NYC around Harlem. 7-22-10 Spoke with Tim Regan at Con Ed. They are continuing investiation and have upgraded qty to approx 500 gallons of fluid missing from system. The area still appears to be in Reg 2. They will contact R3 if they find the leak is in our region. NFA jm I asked Con Ed (Regan) for the current status of the site and he noted that high PFT tracer gas readings were detected at 155th St and Harlem River as well as West End Avenue and 97th Street in Manhattan. Regain noted that PFT crews are currently at both locations taking further samples to determine the exact source. Regan also noted that boat patrols showed no impacts to the Hudson river and no dielectric had been found during a sewer/utility survey. After discussion with Randy, I called Con Ed and asked them to report a new spill (as we don't have edit rights to reopen and reassign Region 3 spill). Regan was provided with DEC Hasan Ahmed's cell phone number for followup once source is determined and agreed to call in a new spill. 7/22/10-12:00PM-HRAHMED-Called ConEd ERT. EMIS#222586. ConEd could not pin point the leak yet. Will call when they find. 10/22/10 - Austin - Hasan reviewed the post-ex sampling results from the excavation around the line leak and found that they showed that the contamination had been removed according to our guidelines - Con Ed contained and cleaned up the release - see eDocs documents for more information - closed - end "
Remarks: "Previous Spill # 1004492 - leak rate appr 25 gal per min - - Unknown Resources - Chemical Detection shows Manhattan leak - none in region 3"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was
CAMP Sangesland spoke with Mr Degrazia who works for Feliks & Sons.
His company did some piping repair work at the site. He says he
replaced some 2 diam pipes just below the surface and dug out 2 or 3
drums worth of contaminated soil. During review of this site address,
an out of date PBS was found. Region 2 PBS group will make an
inspection within the next 1 to 2 weeks. 3/6/2006 - Review of records
shows that the correct PBS for this site is listed under the address:
315 West 96th St, NYC. The excavation/remediation work being done on
the site is complete Spill Closed"

Remarks: "FIRE DEPT. COMING TO INSPECT: FOUND SOME CONTAMINATED SOIL, HE IS
LEAVING TWO DRUMS, TO BE PICKED UP: SPILL ALL CLEANED UP:"

 DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was CAMP This spill site has been transferred from DEC Sigona to Remedial Bureau B, on August 4, 2003. On May 2, 2006, Mr J Peck visited 303 West 96 th St. NYC. Mr Messina of EM, Mr Mooney of GSC/K and Mr Igel, the current operator/owner. were also present. Although there have been some BTEX constituent concentrations reported since the underground tank and soil removal action that occurred in 1996, the general trend for BTEX constituent concentrations has been downward since then. The ownership and operation of the subjet station was tranferred from EM to Mr Igel in June of 1996. all previous EM SNs were either closed of consolidated under the above EM SN. All underground storage tanks listed under PBS No. 2480762 have been removed or closed. All current underground storage tanks are listed under PBS No. 2188891 with the new owner operator. There are no open spill Nos associated with the new owner/operator. "

Remarks:

"CALLER REP FOR EXXON AND THEY WERE DOING SOIL BORINGS AND THEY BELIEVE THEY HAVE CONTAMINATION THEY WILL HAVE LAB TESTING DONE THIS IS AN ACTIVE GAS STATION AT THIS TIME "

Contact Phone:	(201) 489-5100
DEC Memo:	"12/21/07 Falvey: Called John Emms of Hess (201)489-5100. He said the cause was either a failed gauge or an overfill. He was unsure. He said that I should call Steve King of Hess for more information. Steve King's phone number (732)750-6707. Steve King told me the following: the spill was caused by an overfill of a 10,000 gallon tank. There are 2 tanks at the location and the wrong tank was filled and #6 oil came out of the vent pipe and into the street. There was no release inside the building. The spill is under control. Eastmond & Sons is at the location cleaning up. Speedi-dri was placed and NYCDOS placed sand to control the spill. The material is solidified. Power wash contractor should be there soon. NYPD blocked off the street to vehicular traffic. There was no PBS registration found for the address provided in the spill report. Mr. King has no knowledge if the tank(s) are registered. He did say there is another entrance to the building on 98th Street (PBS may be registered under that address) but he did not have an address for that entrance. R. Ketani is on-route to location. I called NYCDEP and hazmat unit was already notified DEP reference number is 1800558. 12/21/07 - Raphael Ketani. I made a site visit. There was a big black area of about 15' by 12'.

This was all #6 oil and extended out to the curb. From there, the oil had run down the street along the edge of the curb to two sewer gratings at the corner of West 97 Street and West End Avenue. The first sewer grating was full of ice and I couldn't see any oil in it. Though it looked like the oil had reached the grating, but as a very thin film. The second sewer was completely unaffected by the spill. The oil had jelled on the street due to the near freezing temperatures. I took many pictures. A.L. Eastmond was there with 2 crews and they were putting down sand and Speedi Dri. They were scooping up the oil with shovels. A very long tanker truck was on site from Eastmond. Two power washer equipped trucks were also on site. I met Eric Sutphen (732) 750-6637 of HESS. He is the Senior Technical Service Representative. He explained that as soon as most of the loose oil is picked up by Eastmond, then his crews will start power washing. He said that DEP had been called. Next, I met the assistant super. for the building. Herman Delerme (212) 666-7774 said that he is in charge of 241 W. 97 Street, but he also does work for the associated building that is back to back his. This other building is 240 W. 98 Street. He showed me the boiler room for 241 w. 97 Street. It was free of oil with no odors. Then he showed me the two tank rooms. The 8000 gal. tank was under 241 W. 97 Street and the 10,000 gal. tank was under 240 W. 98 Street. You could walk completely around both tanks and both rooms were dry and odor free. I asked Mr. Delerme why the spill happened. He said that the doorman of 241 had told the driver where to hook up, but, he said, the doorman doesn't speak english well and doesn't have a good memory. So the wrong fill port was used. I asked him whether there was a whistle on the vent pipe. He said No, but that he will have one put on. Next, I asked him to show me the registrations for the tanks. He showed me one for the 10,000 gal. tank (#2-205419), but could not produce one for the 8000 gal. tank. Last, I went back outside and viewed the cleanup progress. Eastmond was almost done scooping up the oil that had run down the street. The crews from HESS were power washing the sidewalk (starting at the highest release location) with two washers. They were doing a good job. The tanker truck from Eastmond was sucking up the loose oil at a Speedi Dri constructed dam. With this, I left the site. The owner is Jacob Jack Weinreb at Weinreb Management (212) 865-5857. The address is 276 Riverside Drive, NY, 10025. Based upon my site inspection where the spill was contained and the cleanup was well underway, I am closing the spill case. 3/27/08 - Raphael Ketani. I sent a PBS registration form with instructions to Jacob Weinreb, Weinreb Management, 276 Riverside Drive, NY, NY, 10025. I included a note that the site was in violation of 6NYCRR Part 612.2, Registration of Facilities. 4/8/08 - Raphael Ketani. Today I found in my mail box a revised PBS registration form for the 8,000 gal. tank. I forwarded the form to Nick Lombardo of the PBS Unit for processing. "

Remarks: "failed guage on tank - spill going into drain down the street. EASTMAM CORP ENROUTE."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spiller City,St,Zip: MANHATTAN, NY
Spiller Company: 999
Contact Name: ERT DESK' MIKE DAUGHTERY
Contact Phone: (212) 580-8383
DEC Memo: "203883. see eDocs ConEd crews worked through the night. As of 7 am they report that all 800 gallons was recovered, pumped from MH 61730 in Manhattan. A temporary clamp was applied to the leak and a permanent repair (welded barrel) will be made today. Breen 2/9/07: e-mail to Mike Pillig - Con Ed S&TO: What's the status of this spill? If cleanup is complete, please send the final emis report so I can close it. (JHO) 2/12/07: updated report from Pillig - all oil contained to manhole. Repaired line and cleaned manhole. Close. (JHO)"

Remarks: "Material came from a feeder (#M51) between W. 49th Substation and Spring Brook Substation. There is a certain amount of oil that runs this route and that amount is decreased by 800 gal and Con Ed isn't sure where it all went. Part of this line passes through the Harlem River. An investigation is in progress. NRC#822233 Clean up pending the investigation. 203883"

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis 119990 09/23/98 13:45 E.S.#9 K.FERRARO REPORTS FELIX FOUND SPILL OF 1 PT OF DIELECTRIC FLUID FROM A LEAKING DISTRIBUTION FEEDER IN MH49990 LOCATED N/E/C W 94 ST & WEST END AVE. SPILL WAS FOUND AT 13:00 HRS ON 09/23/98. SPILL IS CONTAINED. THERE WAS NO ENTRY TO ANY SEWERS OR WATERWAYS. THERE WAS NO WATER IN THE STRUCTURE. A SMAPLE WAS TAKEN AND SPILL TAG #17205 WAS INSTALLED. DIAPERS WAS PLACED BELOW THE LEAKING FEEDER. THERE WERE NO AGENCIES ON LOCATION. 09/23/98 16:50 hrs. MR. MILLER OF THE N.Y.S.D.E.C. CALLED THE MCC #9 DESK & SPOKE TO T. RUSSO #45348 INQUIRING ABOUT THE STATUS OF THIS CLEANUP. HE WAS INFORMED THAT THE CLEANUP IS PENDING DEENERGIZING OF FDR.# 17M91. 09/23/98 20:42 MCHUGH REQUESTED CIG TO OBTAIN CHEMIST TO PERFORM AIR MONITORING AND PERSONAL AIR MONITORING FOR 21:00 HRS ON 09/23/98 IN MH49990 LOCATED N/E/C W 94 ST & WEST END AVE....LOGGER PGM 09/23/98 21:35 PHIL PEDERSON (SENIOR INDUSTRIAL HYGENIST) REPORTS AS PER JANET FOX IT IS NOT POSSIBLE AT THIS TIME TO HAVE AIR MONITORING PERFORMED DUE TO LACK OF AVAILABLE CHEMISTS. CLEAN UP SHOULD PROCEED WITHOUT THE AIR MONITORING. Cleanup - R. Valenzuela and J. Rodriguez O.S. - completed 9/24/98 EPA ID # NYP004016788. Cleaned as >50 PPM. No water found in structure. Found one ounce of black compound in structure. Cleaned one foot around black compound. Disposed of waste in two drums. Taken to ChemWaste via corporate transportation. Used absorbant pads and Slix to clean. Tag #10472 removed at 0830 hrs on 9/24. 9-29-98 14:35 On 9-25-98 at 0830 hours P.Rubino 69511 installed sign 10472. Sign will stayin place pending analysis of sample. 10/1/98 Analysis received SA98-09954 = Aroclor 1254 / PCB = 38 PPM. "

Remarks: "joint in manhole failed causing spill - spill will be cleaned up after test results recieved"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was M TIBBE 6/7/07-Matthew Klaas (Albany DER) -Called Midboro Management looking for Anna, at 212-877-8500, she no longer works there but i was connected to Christine's voice mail. I left her a message asking her to return my call. 6/8/07-Matthew Klaas (Albany DER) -Contacted Petroleum Tank Cleaners at 718-624-4842, spoke to personell that was able to pull up old file in DOS format that cannot be printed or retrieved. File showed no indication that oil was spilled. File stated they pumped out the tank, cleaned it, removed it(including lines), poured a new concrete slab, and installed a new 5k gallon tank and new lines. All record of charges are for labor, removal of old tank and lines, and installation of new tank with new lines. 6/11/07-Matthew Klaas (Albany DER) -Drafted a letter to be sent to Christine Soja of Midboro Management requesting more information about the 780 West End Ave oil spill. 10/1/07 - received letter Midboro Management Inc. Needs to be reviewed to determine wether clean up is sufficient 4/1/09 - Austin - Transferred from Needs Reassignment to Zhune for further work to remediate and close - end Contact -Ellen 212-877-8500"

Remarks: "tank to be pumped out and new tank installed tank is in a tank room (basement)"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Memo:

"01/06/17 - Lakhani Spoke to Afrosa Amin at DEP regarding spill. Two calls were made: one was made by an anonymous caller notifying that oil was running down the street and another was made by the super of the adjacent building, Mr. Abashi, informing that the spill occurred due a home delivery for heating oil, #2 fuel oil. Rags have been put down on the street to absorb the oil. It is unknown whether the oil has reached the sewers. 01/09/16: J.Kann - Veronica responded to the spill. Spill assigned to Veronica Zhune. 1/9/17-Zhune responded to this spill. During the inspection I observed no visual or olfactory evidence of oil contamination. Spill Closed. "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name: PHIL SILVERGLATES
Contact Phone: (201) 206-1185
DEC Memo: "11.14.05 Sharif// Responded to the site around 8:00 am this morning. #6 oil Spill occurred due to overfill of the tank. Oil impacted side walk, flowed down along the curb about 20 ft under 3/4 parked vehicles. Spill also travelled down the outside stairways to basement entrance area.No clean up crew was there at that time.Phil Silvergalates, (201) 206-1185 from RP(Petroleum Services) was at the scene. Later on he informed me clean up crews are at the scene and they are sweeping the speedy dry placed before and will follow power wash. Building super was not available to follow up about the clean up."

Remarks: "Gauge on oil tank was defective - causing an overfill Superintendent 'Horatio' - (212) 865-0120 Building is owned by David Associates Tank is in basement but spill occurred at street level (sidewalk) through fill pipe. Cleanup: TriState will be enroute to cleanup. "

 DEC Memo: "2/26/2016: Rashad 310 West 94th Street has no alternate address. PBS registration 2-043184 found for site, there is a 3,000 gallon #6 fuel oil UST. Called Afrosa, she said a person from the neighborhood complained about an unknown oil company spilling an unknown amount of oil. This company put down speedy dry and cleaned area however later this morning the complainer stated that the area was still slick. Afrosa let me know that she will be sending out an inspector to check area and the inspector will call me back with update. Krisandra from DEP called and said that there is evidence of a small spill that occurred. She estimated it was about 5 gallons and that it looks like it was pressure washed into the street. She said there is some residue on the curbside and a light heating oil odor in the are. She reached out to the super however he did not answer. Supers phone number (Victor) is 212-203-6554, management company is Argo Corp 212-757-5830. Called site phone from PBS registration, it was wrong number. Called super and left message. Called site owner from PBS registration 718-225-9511, number is not in service. Called management company, Argo Corporation and let them know that there was

DER Facility ID: 477516
DEC Memo: "Obligado - Desk Duty -3-2-16 - I spoke to Simon Lugen, the technician. They were doing a tank test. Upon entering the tank area he noticed a lot of contaminated speedry on the floor and estimated that there was a large spill of 500 gallons of #4 oil on the floor in the tank room. The AST on saddles and there is oil in the tank, estimated at 2800 gallons of oil in the tank right now. Due to small access and condition of the tank room, he was un able to see where the leak was. The tank test revealed a wet leak. Spill is contained in the cinder block tank room apparently. NO evidence that there were drains impacted. I spoke to Perry L 212 896 8600 at ARGO Management Company. He was unaware of the spill. I informed him that the tank testing company found the floor covered with oil and the tank failed the tank tightness test, indicating the tank was leaking. I told him he needed to remove the oil from the tank and hire a clean up company. he said he would work on it and contact me once he hired a company. This spill is assigned to Veronica for response. PBS #2-043184 Norson Realty Corp C/O ARGO 50 West 17th Street 6th Floor New York, NY 10011 Contact is Perry - perryl@argo.com 3/3/16-Zhune responded to this spill. Met Israel from Millennium Tank. During my inspection I observed the tank was wet in the bottom and the floor of the tank room was also wet. Millennium will pumped out the oil from the tank and will clean the oil on the floor. There was no petroleum odors in the building. 3/3/16 - Obligado - Updated TTF mail merge. 4/8/15-Millennium Tank Maintenance emailed the report Dated 4/5/16. The report stated that on March 2nd 2016 Millennium Tank Maintenance(MTM)was called to an oil spill at 310 West 94th Street. the site had some oil on the cement ground which caused for MTM to perform a pressure test which failed due to leakage. MTM placed blowers and fans to vent out the basement of any oil fumes. MTM cleaned up all oil with oil absorbent. MTM lifted the aboveground petroleum storage tank of the ground and welded all seams and placed new steel plates on the tank. Once the tank had been repaired allowing for a perfect seal, MTM placed the tank upon saddles. the cement ground has been cemented and epoxy coated, along with the tank. This location is now free of any odor and oil contamination. The tank at this location has successfully passed the final tank test, confirming a tight seal allowing no escape of air or oil. Based on the above information this spill is closed. "
Remarks: "test failure, wet leak loss to concrete"

DEC Memo: "06/10/09-HRAHMED-Spoke to John Mulholand of Greenider Realty Corp (347 865 1084). As per him they hired Eastmond to clen up the spill. Spoke to Neo of eastmond (347 682 0730). Eastmond emptied the tank to a temporary tank on 06/09/09. The spill was contained in the concrete vault under the sidewalk. The tank is sitting on a concrete pad. After spill cleanup eastmond will test the tank for tightness. 03/09/10-HRAHMED-Received closure report from Eastmond. As per the report, They pumped out 20000 gal #4 fuel oil above ground tank and installed a 3000 gal temp tank for heating. they found a pinhole at the bottom of the tank by visual inspection. They scrapped and wire brushed the bottom of the tank. Eastmond relined one thired of the tank and repipe the tank. The tested the tank for tightness. The oil was spilled in the tank room and contained there. The tank room has a concrete floor. Eastmond drilled 3 peep holes in the concrete floor to make sure there in no oil underneath the floor. No tank tightness test results were provided with the report. 07/30/10-HRAHMED-Called Lizette of Eastmomnd and left a message to forward the tank tightness test results. Received tank test result sent by Lizette. as per the report the tank was tight. This case is closed. "

Remarks: "Contained at this time-Al Eastmond and sons cleaned it up."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

S105997576

would have to update PBS Unit and submit boring analysis. Vought will require borings through bottom of tank and adjacent to fill ports. Vought requires 4 endpoint samples (two from tank and two from fill line) analyzed for 8270. NYSDEC will require endpoint analyticals and site plan. 7/2/2003-Vought-Spoke with Isaac Mungra (Atlantic -718-857-9800) who performed soil borings. Two borings by fill and samples sent for analysis (awaiting analyticals). Samples could not be obtained in tank due to water infiltration so NYSDEC will accept one water sample for analysis. 7/25/2003-Vought-Spoke to Isaac and two groundwater samples and two soil borings and showed non-detect. Isaac will fax samples analysis. Fill line was sampled at 10' feet intervals and those samples will also be sent and site plan will be included. 9/8/2003-Vought-Received site plan from Atlantic Environmental with NFA request. 9/26/03-Vought-called Issac for endpoint analyticals (soil and groundwater sample from tank). Vought spoke with Isaac who will refax analyticals. Analyticals received and naphthalene in both samples exceeds TAGM 4046 Groundwater Standards (25ppb). Vought sent letter requiring additional remedial measures (possible ORC, thorough cleaning of tank and resample). Isaac will call back with owner info for requirement letter. 9/30/03-Vought-Spoke with Isaac and site owner is Samson Management, 97-77 Queens Blvd., Rego Park, NY Phone -718-830-0131. Vought sent letter to address and faxed copy to Isaac. 10/28/2003-Vought-Received fax from Isaac Mungra which include groundwater analyticals from samples received 9/29/03. Groundwater analyticals showed no TAGM exceedances. Vought called Issac and required either quarterly groundwater with downgradient water sampling to ensure no remobilization of contamination or submittal of a remediation plan. Vought called Issac to explain further requirements and left message to return call to DEC. 1/7/04-Vought-Spill transferred from Vought to Austin. 1/27/04 - Sawyer - Spill transferred from Austin to Sawyer. 1/27/05 - Sawyer - Information in the file showed no TAGM exceedances for soil or groundwater. Since, the source tank has been Closed in Place from 12/1/03, there should be no further problems. No further action required. Closed. "

 DEC Memo: "03/16/11 -LZ Based on information you provided in the February 14, 2011 report (eDocs), spill case # 0204671 is closed. The presence or absence of 5,000-gallon UST at the site (PBS 3 2-216569) must be determined. If the tank is in place, it must be properly closed. The attached application must be filled in to show the status of the tank and the addition of the unregistered AST. Failure to comply with these requirements by April 22, 2011, would trigger an enforcement action. 06/08/10 - LZ A certified TTF letter(eDocs) was sent to Lisa Gorelli, 214 River Owners Corp. NY, NY. Prior to Sept, 2004 data translation this spill Lead_DEC Field was SANGESLAND 06/22/06-Hiralkumar Patel. visited site on 06/20/2006. spoke to Joe Otero (212-666-5612), super of building. he is working at location since 1995. as per Mr. Otero, after initial failure during test, owner has replaced old 5000 gal UST with 4000 gal AST in concrete vault. as per Mr. Otero, there were 17 holes in bottom of tank. old tank was used to store #6 oil. Mr. Otero doesn't know which company removed tank and did they do any soil sampling or not. Management company is: Lawrence Properties 855 Avenue Of The Americas Rm # 200 New York, NY 10001-4119 Contact: Ms. Lisa Gorelli Ph. (212) 868-8320 Ext. 370 FAX (212) 279-2119 PBS# 2-216569 as per PBS records, site

FINDS:

Registry ID: 110055426864

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "8/6/2010 Sangesland spoke to Adam Wartski (212-222-9009) He is

property manager. He will gather paperwork on tank repairs and forward materials to DEC to close out this case. TTF letter sent to: (see eDocs) Whitehall Hotel Corp. 251 West 20th St New York, NY 10011 Attn: Adam Wartski 07/16/13 - Spill Case is transferred from Brian Falvey (PBS Unit) to V. Brevdo (Section B) as per DER Region 2 decision - Tank Test Failure Spill Case. VB 05/08/2014 - V. Brevdo On June 25, 2010 Eastmond & Sons Boiler Repair and Welding Services performed a system tightness test on the 10,000 gallon AST oil tank and test failed. Eastmond & Sons then isolated the oil lines and retested, and tank passed the tightness test. The cause of first test failure was a leaking vent line. Eastmon installed a new vent line, retested system on August 23rd 2010 and passed tightness test. Report of the passed test was submitted by Eastmond on May 8, 2014 at the Department's request. Eastmond verified that they found no discharge of oil into the ground, and requested closure of the spill case. The Department closed spill case effective May 8, 2014. V. Brevdo"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "09/16/13-Zhune spoke to Markus Simons from AKRF. He said they did subsurface investigation. They found soil contaminated at depth 10-15 ft, in one of the borings installed in one of the corner. The buildings were demolished years ago. They will remove the contamination in the future. They will excavate the entire site to develop a new building with basement. 4/15/14-Vought-Received email from DEC Martinkat that was also sent to DEC John and DEC Panzone. DEC Martinkat provided response to comments offered by Mr. Bruce Noble on a Draft Environmental Impact Statement(DEIS) Replacement Nursing Facility Project that was attached to email with respect to development of Jewish Home Lifecare (JHL) residence at the site. A news article was also reported to DNA Info on the site. This spill transferred from Zhune to Vought as Zhune on vacation. Vought renamed spill from Parking Area to Potential Jewish Home Life Building . Vought performed complete file and site review. As per NYCDOB Database Partial Stop Work Order Exists on This Property and no alternate addresses for property as well. Vought inspected Spills database and found: 0005758(closed) 125 West 97th Street for one gallon of unknown oil in Con Edison manhole. 9607486(closed) 150 West 97th Street(across street from site)- 7 gallons #4 fuel oil overfill 9411639(closed) 150 West 97th Street(across street from site) - 2 gallons #4 fuel oil on concrete 0612627(closed) 808 Columbus Ave (east of site)-excavation to bedrock and contamination noted in northeast of site in same block. No groundwater observed in excavation and CP51 Unrestricted exceedences noted however closure appropriate considering extent of excavation to bedrock and no groundwater present (or minimal groundwater in bedrock). 0002657(closed) PS 163 163 West 97th Street -(immediately west of site) air complement due to chemical application at apartment complex adjacent to school. 0209357(closed) 765 Amsterdam Avenue (west of

site)- tank test of #2 fuel oil tank and soil borings performed and no groundwater or soil exceedences. Vought searched PBS database and found no PBS listing for site but found PBS#: 2-339318 165 West 197th St (west of site) - one 5000-gallon #2 fuel oil AST- 2-611255 808 Columbus Avenue (east of site)- one 20000-gallon #6 fuel oil UST 2-478938 792 Columbus Avenue (Park West Village-north, northeast and immediately east of site) one 16900-gallon #6 fuel oil AST and one closed 30,000-gallon #6 fuel oil UST 2-478903 788 Columbus Avenue (Park West Village-north, northeast and immediately east of site) one 16900-gallon #6 fuel oil AST and one closed 30,000-gallon #6 fuel oil UST 2-478946 784 Columbus Avenue (Park West Village-north, northeast and immediately east of site) one 16900-gallon #6 fuel oil AST, one closed 30,000-gallon #6 fuel oil UST and one closed 20,000-gallon #6 fuel oil AST 2-303895 765 Amsterdam Avenue (west of site)-one closed 15,000-gallon #2 fuel oil UST and one 5,000-gallon #2 fuel AST 2-353515 PS 163-163 West 97th Street(immediately west of site) one in service 10,000-gallon #2 fuel oil AST. Email from DEC Panzone to Bruce Noble-4/10/14. Email that Dear Mr. Noble: It was a pleasure to have spoken with you earlier. As per our conversation, please provide me with all the information and links that you spoke of. Thanks. Email from Bruce Noble (email: brucenobl@gmail.com)-4/10/14. Email that Dear Mr. Panzone, Below are two links to the information you need. The first is a general overview of much of the history of the project. The second is a link to the DEIS. I am also attaching the comments I am preparing for the public meeting to be held May 7 and 8 about the DEIS. If you would be so kind to look at my statement, please let me know what sections need to be corrected.Thank you so much. Bruce Noble:
health.ny.gov/facilities/cons/environmental_quality_review/jewish_home_lifecare/ AND
http://www.health.ny.gov/facilities/cons/environmental_quality_review/jewish_home_lifecare/docs/draft_environmental_impact_statement_deis.pdf . Draft Statement for Public Meeting on 5/7 and 5/8 (Bruce Noble)-4/10/14. Presentation raises four issues raised by the Draft Environmental Impact Statement . The first is the measurement and treatment of lead in the proposed project site. The second is a brief exploration of how the State of New York regulates lead in a construction environment. Third is the significance of lead dust inhalation. Lastly, I will discuss the build vs. no-build options. Statement also notes that Fortunately, and appropriately, The Department of Health is not the only state agency that is concerned with the proposed project site. The New York State Department of Environmental Conservation has the authority to regulate soil cleanup under 6 NYCRR Part 375, Environmental Remediation Programs. Statement also notes All the DEC has to do is determine that remediation is required in order to protect public health. Once that happens, JHL will have to follow the three hundred or more pages of regulations issued by DEC and submit an application. Those regulations include detailed instructions for how and when citizen participation becomes part of the application process. Once JHL s application for the Brownfields Cleanup Program is accepted by DEC, JHL may receive some support from the state for the cleanup program. Email also refers to CP51 and DER-2 Guidance. Website Links provided by Bruce Noble as above-4/14/14.
health.ny.gov/facilities/cons/environmental_quality_review/jewish_home_lifecare/ Link to NYSDOH website that noted State Environmental Quality Review (SEQR) of JHL #121075. Website notes

POTENTIAL JEWISH HOME LIFECARE BUILDING (Continued)

S113916086

that In response to numerous requests from residents of Park West Village, parents and staff of PS 163 and elected officials, DOH decided to reschedule the public scoping session for July, 30, 2013 to allow the public additional time to review the Draft Scoping Document. Since that time, DOH has received additional requests from JHL and the public to once again reschedule the public scoping hearing. DOH, in an effort to maximize input from the community, has again rescheduled the public scoping session for Tuesday, September 17, 2013 from 6:30 p.m. to 8:00 p.m. at P.S. 163, 163 West 97th Street, New York, 10025.

http://www.health.ny.gov/facilities/cons/environmental_quality_review/jewish_home_lifecare/docs/draft_environmental_impact_statement_deis.pdf . Link to Draft Environmental Impact Statement (AKRF)-March 2014. Lead Agency contact is: NYSDOH Charles P Abel Director Division of Health Facility Planning Ph: (518)402-0967 Address for Jewish Home Lifecare is: Jewish Home Lifecare 120 West 106th Street New York, NY 10025 DEIS contains sections including executive summary, project description, land use/zoning/public policy, shadows, historic and cultural resources, hazardous material, water and sewer infrastructure, transportation, air quaility, greenhouse gas emissions, noise, public health, neighborhood character, construction, mitigation measures, alternatives, unavoidable significant adverse impacts of the proposed project, growth inducing aspects, irreversible and irretrievable commitment of resources and appendices. EIS undertaken pursuant to SEQR Act which is part of ECL and NYCRR. Development will include a new 20-story building, plus cellar, public vehicular entrance for drop off and pick up and a loading and service area as well as landscaping around building. Site is currently occupied by a 88-space parking lot. ...NYSDOH determined that it should assume lead agency status and conduct a coordinated review among the involved agencies. NYSDOH issues Positive Declaration Notice to prepare a draft DEIS under SEQR on 6/5/13. Public meeting was held allow public to provide oral commentson scope of DEIS on 9/17/13. NYSDOH prepared a Final Scoping Document on 1/28/14 after all comments were received and considered. DEIS concludes that the Proposed Project would not result in any adverse impacts related to.. : land use/zoning/public policy, shadow impact, architectual resources, hazardous materials, infrastructure (water treatment), some traffic impacts, no adverse stationary source air quality impacts , no adverse noise impacts, no adverse impacts on public health from dust or lead due to RAP/CHASP, no adverse impacts to neighborhood character. ..regulatory requirements pertaining to excavated soil, petroelum storage tanks and dewatering would be followed. Once excavation and foundation activities are complete, all the contaminated soil would be remediated and removed from the Project Site... (page S-17). DEIS also includes mitigation section including proposed mitigation of traffic and noise and also includes discussion of alternatives. Proposed excavation to 20 bg over most of site. Phase I ESA and Phase II also performed on site. Phase II Investigation (AKRF) as part of DEIS Chapter 5-March 2014. Refusal on bedrock at 12-20'bg and groundwater from 11-18'bg. Phase II included collection of soil and groundwater samples. Eight borngs performed up to 20'bg. VOC, SVOC and metal exceedences were noted. PID raeading and staining showed petroleum contaminated soil was present between 5-15'bg in southeast corner of project site and this is why above spill number called in. RAP to also include vapor barrier for new development and 2-foot cap of clean fill for areas not covered by

building or pavement, CAMP, proper soil disposal and sampling of dewatering discharge prior to discharge. 4/16/14-Vought-Continued File Review by Vought: Email from DEC Panzone to Noble-4/10/14. Email that What is the address of this site? Email from Noble to Panzone-4/10/14. Email that The address on the DEIS is 125 West 97th Street. It is across the street from my building, 120 West 97th Street. On Google Maps, it is the parking lot between P.S. 163 and 784 Columbus Avenue. Email from Noble to Panzone-4/10/14. Email that Dear Mr. Pavone, Just now I came across an online news article whose link is below. It gives us more details on who took the lead samples from the site over one year ago. It also gives you some idea of the stance of Jewish Home Lifecare representatives at that time. <http://www.dnainfo.com/new-york/20130426/upper-west-side/toxic-levels-of-lead-found-at-nursing-home-development-foes-of-site-say>. Email from Noble to Panzone-4/11/14, Email that Mr. Panzone, In addition to the link I sent you yesterday, I attached a statement I am preparing to give next month. In re-reading it, I realized that some of the reasoning and writing could be improved. So I am attaching an updated version. You do not have to comment on it. Let us hope that I will not have to make this presentation on May 7, now that the matter is in your hands. Panzone forwarded email to Martinkat. Email from Vought to DEC Panzone-4/14/14. Email that Tom, Thanks for the email and this project is assigned to Veronica who is out on vacation from now until early May. As per Veronica's spill notes: 09/16/13-Zhune spoke to Markus Simmons from AKRF. He said they did subsurface investigation. They found soil contaminated at depth 10-15 ft, in one of the borings installed in one of the corner. The buildings were demolished years ago. They will remove the contamination in the future. They will excavate the entire site to develop a new building with basement. There are no files in E-docs for the spill so I will contact AKRF and ask them for an update including sending me additional copies of any reports with updates on the above work noted in Veronica's entry. Thanks. Email from Vought to DEC Panzone, RHWRE, DEC John, RSE-4/14/14. Email that Tom, I called and spoke to Marcus Simmons (consultant for the open spill) this morning and he just sent me the below email which contains some more info as you noted you needed in your separate email. I have also just spoke to NYSDOH Justin Pfeiffer (copied above) and he will be forwarding us the Phase II, RAP and CHASP which were submitted to NYSDOH so that we may review them. Mr. Pfeiffer also requested that due to the environmental review process, that we discuss any further DEC requirements with him prior to issuance. I will get back to you and all parties with our requirements once I receive and review the reports and discuss them with my supervisor (Randal Austin). Note that I have copied Mike Hughes as well as our Spills liaison for NYSDOH. Thanks. Email from AKRF Simmons to Vought-4/14/14. Email that Per our telephone discussion, below is the 9/17/13 email sent to Ms, Zhune. You can find out more (than you ever wanted to know!) about the site at http://www.health.ny.gov/facilities/cons/environmental_quality_review/jewish_home_lifecare/ Chapter 5 of the DEIS includes discussion of the spill. The Phase II Report, RAP & CHASP are currently in review with NYSDOH's Center for Environmental Health comments are expected Friday 4/18. As I mentioned, I am unsure if DOH would allow us to further circulate these drafts. However, the DOH attorney involved is: Justin Pfeiffer, Esq. NYS Department of Health (518) 473-1403 jdp10@health.state.ny.us Feel free to contact me with any questions.

Email contained the following string: Email Request from DEC Zhune to AKRF Simmons for site summary-9/16/13. Email from AKRF Simmons to DEC Zhune-9/17/14. Email that Last month, on behalf of Jewish Home Lifecare (JHL), AKRF Inc. conducted a subsurface investigation at the above-referenced parking lot. The lot is the site of a new elder care facility proposed by JHL, which is subject to approval by NYSDOH. One of the 10 borings drilled on the lot (in the south east corner), from approximately 5 feet to 10 feet down, encountered petroleum odors, staining and PID readings from 1.3 to 111 ppm. Groundwater was not encountered in this boring (though it was in several others at 14 to 18 feet) and refusal on bedrock was at approximately 15 feet. No evidence of similar contamination was observed in any of the other soil borings, including the most proximate borings located approximately 15 feet to the north and 15 feet to the east. Throughout all borings, which extended up to 20 feet below grade, fill materials (including sand, gravel, silt, coal, brick, ash, and/or slag) were encountered. Laboratory analysis of the soil sample from the seemingly contaminated interval found 40.5 ppm of total VOCs, including 18.1 ppm of BTEX (0.12 ppm benzene). None of the detected compounds exceeded Restricted Residential Soil Cleanup Objectives. Levels of SVOCs in the sample were not correspondingly elevated (total 8.7 ppm), all PAHs with no naphthalene detected, similar to or lower than samples from elsewhere on the lot. Although groundwater was not encountered at this location, it was encountered in some of the other borings. Two VOCs were detected in the groundwater sample collected approximately 80 feet to the north: an estimated concentration of 0.11 g/L of benzene and an estimated concentration of 0.38 g/L of toluene, both of which are below Class GA standards. Given that the site's row house buildings were demolished decades ago, the petroleum contaminated soil seems likely to have either originated in the fill used to restore the site to grade (the houses had basements) or perhaps from a basement fuel oil AST (though the contamination does not seem typical of fuel oil). It likely has been present for many decades. An off-site source is not suspected given that the contamination appears to be so far above the water table. There was a spill reported at the property immediately to the east (# 9702659), but it involved #6 fuel oil, so it would not likely be associated with the findings of BTEX and low SVOCs detected here. The proposed new senior residence/care building includes a basement that would require excavation to at least 10 feet down in the area where contamination was encountered. The project is subject to State Environmental Quality Review (SEQR) (as a nursing home it requires construction authorization from the NYS Department of Health). Accordingly, we would propose that the contamination be addressed as part of the excavation work that would begin once SEQR is complete, assuming that DOH approves the application. Email from Vought to DEC Panzone-4/14/14. Email that Tom, Thanks for the email and this project is assigned to Veronica who is out on vacation from now until early May. As per Veronica's spill notes: 09/16/13-Zhune spoke to Markus Simmons from AKRF. He said they did subsurface investigation. They found soil contaminated at depth 10-15 ft, in one of the borings installed in one of the corner. The buildings were demolished years ago. They will remove the contamination in the future. They will excavate the entire site to develop a new building with basement. There are no files in E-docs for the spill so I will contact AKRF and ask them for an update including sending me additional copies of any reports with updates on the above work noted

S113916086

in Veronica's entry. Thanks. DEC Panzone replied and urged caution in drafting response. Email from NYSDOH Pfeiffer to Vought-4/14/15. Email that The comments you see are from DASNY. Our Bureau of Environmental Exposure Investigation (BEEI) is reviewing this currently, and I have copied Krista Anders and Justin Deming from that office. Ideally I would like the reviews to be sequential to avoid two versions with edits, but we are under some time pressure. We will make sure that DEC's edits are merged with ours. Do you think DEC can turn these around by the end of the week? Thanks, Justin. Attached to email was DRAFT Phase II and DRAFT RAP. Attached PDFs were missing site plans and analytical tables and could not be reviewed. Email from DEC Martinkat to DEC Panzone-4/14/14. Cc'd were RHWRE, DEC Cozzy and DEC John. Martinkat summarized site and noted she would not recommend site for Registry of Inactive Hazardous Waste sites and DEC involvement (with respect to lead) was not necessary. DEC Cozzy replied to all that he agreed with Martinkat and site would not be listed on Registry. Email from DEC Cozzy to all parties-4/14/14. Cozzy noted he agreed that site was not eligible for listing on Registry and whether developer wants to apply or not for BCP is their option and that site would most likely not be eligible for BCP. Email from DEC Panzone to DEC Cozzy-4/15/14. Panzone provided draft response for Noble to DEC Cozzy for approval. Response also noted that Spill remediation program is handling the petroleum spill at the site and Panzone noted he need more info from Vought. Cc'd were Martinkat, RHWRE, Vought and RE. Email from DEC Cozzy to DEC Panzone-4/15/14. Email with edits on draft response to Noble. Email from DEC Panzone to DEC Cozzy-4/16/14. Email thanking DEC Cozzy for edits and request for insight on findings on DEIS. Email from DEC Cozzy to DEC Vought-4/16/14. Email inquiring as to why NYSDOH had a DEIS. Email also noted that Vought to state whether SVOCs are related to spill and metals level do not rise to a significant threat level. Email from DEC Panzone to DEC Cozzy-4/16/14. Email including two links forwarded by Noble in email dated 4/10/14. Email from Vought to NYSDOH Pfeiffer-4/16/14. Email that Justin, I have been reviewing the file for the past two days (including the previous emails, surrounding spill sites, surrounding PBS sites and the DEIS). I will make every attempt to turn around my review of the RAP and Phase II that you attached below, however, the figures (site plans) and analytical tables were not attached. It is imperative that I have the site plans to see the spatial distribution of the soil and groundwater data as well as the analytical results to ensure that both the investigation and proposed remediation is adequate. Please resend me the attachments with the site plans and analytical tables. Note that I have copied AKRF as they produced the report and may be able to provide them more quickly. Thanks again for your help. 4/16/14-Vought-Received copied of Phase II and RAP from both NYSDOH Pfeiffer and AKRF Simmons. Vought sent them email confirmation of receipt. Vought received reply from AKRF Simmons that he would be out of office and to keep AKRF Asya Bychkov(email: abychkov@akrf.com) and AKRD Lisa Lau (email:llau@akrf.com) copied on correspondence. Vought sent reply that Marcus, I hope you have a speedy recovery and will do on keeping Asya and Lisa copied. Received email from NYSDOH Pfeiffer to NYSDOH Dawn Hettrick, NYSDOH Deming and Vought that Hello folks,AKRF's draft Phase II has been FOILed, and the FOIL officer in the Governor's office asked me whether we can expect any substantive changes to that document. I am not trying to rush anyone, but any information in that regard would be helpful, if or when it is

POTENTIAL JEWISH HOME LIFECARE BUILDING (Continued)

S113916086

available. Many thanks, Justin . NYSDOH Deming replied that Hi Justin. We don't expect substantive changes but we will be asking for clarification type changes to language to be sure that everyone is clear about intentions and what is being proposed. We expect to have comments to you by Friday COB. OK? Justin. DEC John sent email to Vought and RSE that Please indicate that DEC typically do not review/approve CHASP, we suggest this be incorporated into the FEIS and finding statement by the Lead Agency in this case NYSDOH? . Vought sent reply to John with cc to RSE, Panzone, RHWRE, DEC Cozzy and DEC Martinkat that Paul, I will make this part of my review, notes and correspondence with NYSDOH and AKRF after I review the Phase II and RAP (hopefully by today). I have copied Tom, Sondra, Jane and Bob C as well due to their prior involvement as well. 4/17/14-Vought-Reviewed DRAFT Subsurface Phase II Investigation (AKRF)- October 2013. Report prepared for: Greenberg Traurig, LLP. Metlife Building 200 Park Avenue New York, NY 10166 Field activities performed in August 2013 including installation of ten soil borings with collection of 28 soil samples and two groundwater samples and collection of soil samples from six tree pits. A prior Phase I performed in May 2011 by Ethan Eldon Associates. NYSDOH approved work plan for investigation. Phase I indicated that former historical row house buildings. Site slopes down slightly to west. Proposed excavation to 20'bg. Two additional borings were installed to delineate contamination found on site Since no evidence of contamination was observed in these additional borings, no soil samples were collected. Soils samples collected from highest PID and deepest dry sample. Soil boring logs show contamination only SB7(8-15'bg) that show petroleum-like contamination with maximum PID of 111ppm at 10'bg and refusal on bedrock at 15'bg with no groundwater in boring. Soil sample collected from 111ppm interval. Soil analyticals show: 120ppb benzene(SB7 13-14'bg), 7100ppb ethylbenzene(SB7 13-14'bg), 9700ppb xylene(SB7 13-14'bg). PAH's also noted due to fill material documented in boring logs. Groundwater samples were non detectable. Report recommends remedial excavation as part of development. DRAFT Remedial Action Plan (AKRF)-April 2014. Most of the outdoor areas would be underlain by the cellar which would extend beyond the above ground fingerprint. Proposed construction would require removal of soil down to bedrock at the spill location and possible dewatering. RAP includes discussion of endpoint sampling, dust control, vapor control, soil stockpiling, soil disposal, air monitoring. Air monitoring in accordance with NYSDOH Generic CAMP and DER-10. Majority of site will be capped with two feet of clean fill. Spill Closure Report will be submitted to DEC upon completion of remediation activities. 4/17/14-Vought-Discussed RAP and Phase II with RSE and he approved scope of work as presented. Vought sent email to NYSDOH Pfeiffer with cc to NYSDOH Hettrick/Hughes/Demming, RE, RSE, RHWRE, DEC Panzone/Martinkat/Cozzy that Justin, The Department has completed it's review of the Draft Phase II, Draft Remedial Action Plan (RAP) and Draft Environmental Impact Statement (DEIS). I have attached the Phase II and RAP which you sent previously with the suggested edits/comments by NYSDOH and I also added the Department's suggested edits/comments. A summary of the Department's major comments were as follows: Phase II 1) During my search of the Spills Database, numerous other closed spills adjacent to the site were noted (spill numbers in attached comments), however, the Phase II noted only one spill in the area. 2)According to CP51 Soil Cleanup Guidance, Unrestricted Residential RSCO's are

POTENTIAL JEWISH HOME LIFECARE BUILDING (Continued)

S113916086

the goals of the Petroleum Spill Response Program. Restricted RSCOs can only be used when the DEC determines that it is not feasible to achieve Unrestricted RSCO's which would be via a submission of a Feasibility Study. Please note, however, that Unrestricted RSCOs are only the goal of the Program and we do close spills above these Standards depending on site specific conditions. RAP 1) During my search of the Spills Database, numerous other closed spills adjacent to the site were noted (spill numbers are in attached comments), however, the RAP noted only one adjacent spill. 2) Same as #2 above regarding use of Unrestricted RSCO's as per CP51. 3) Confirmation sampling frequency guidance is now as per DER-10 and no longer STARS Memo No. 1. 4) I added a provision that if any vapor complaints are received from the public during the development the NYSDOH and NYSDEC will be notified immediately. 5) Documentation of the vapor barrier compatibility with petroleum must be submitted (routinely provided by Grace manufacturers on other sites for NYSDEC). The Department does not typically review/approve the CHASP and suggests that it be incorporated into the FEIS and finding a statement by NYSDOH as the lead agency. DEIS: 1) The DEIS noted that Once excavation and foundation activities are complete, all the contaminated soil would be remediated and removed from the Project Site... (page S-17). The Department strongly recommends that all soil excavation necessary for remediation occur as part of site development before excavation and foundation activities are complete. Once the foundation is poured and utilities are installed, it may prevent further excavation when feasible and necessary. Furthermore, excavation in areas after they are landscaped may not be feasible and logistics may be difficult due to the amount of equipment associated with a building under construction. I have also attached some maps and site plans that I have produced that may be of assistance to you and those copied above as well. As always if you have any questions or concerns, wish me to forward this onto AKRF or need a formal letter, please let me know. Thanks 4/17/14-Vought-Received reply from NYSDOH Pfeiffer that Thank you very much for the quick turnaround. I will contact my colleagues in DOH/CEH about your comments. 4/18/14-Vought-Replied to email from DEC Panzone dated 4/16/14 with summary of remedial action and note on whether SVOCs were or were not likely related to petroleum contamination. 4/23/14-Vought-Received call from and spoke to AKRF Simmons who had received DEC's comments from NYSDOH verbally and had a few additional questions. AKRF did not receive copy of Vought's email on 4/17 as per NYSDOH instruction. Vought clarified that top two feet of fill (cap) must be sampled to ensure it meets standards but also noted that backfill could meet Restricted Residential Standards if it was greater than 2' deep. AKRF Simmons noted that they planned to have a revised RAP to NYSDOH by the end of this week. Vought sent email to NYSDOH Pfeiffer/Hettrick/Deming that Justin, I received a call earlier today from and spoke to Marcus Simons from AKRF (copied above) who noted that he submitted the Revised RAP incorporating DEC's comments to NYSDOH. As always the DEC remains ready to assist you if needed in the review of the RAP to ensure the revisions are adequate with respect to our requirements. Marcus also noted that he will need a formal separate DEC approval letter of the revised RAP (once received) and as you are the lead, I want to make sure I have your approval. If you wish, I can send the draft approval letter to you for review prior to our transmission to AKRF. Thanks. 4/24/14-Vought-Received revised RAP and Phase II from NYSDOH Pfeiffer. 4/28/14-Vought-Reviewed revised RAP and Phase II

S113916086

received on 4/24/14. RAP and Phase II did not contain any of DEC's suggested edits (especially concerning use of Unrestricted Standards, immediate notification if vapor complaint and use of DER-10 for endpoint sampling frequency). Vought spoke to DEC John regarding these issues (as per John's request) and DEC John left message for both DEC Cozzy and NYSDOH Pfeiffer to discuss inclusion of DEC comments and get clarification on agency responsible for RAP and Phase II approval as per SEQR. 4/29/14-Vought-Received message from NYSDOH Pfeiffer asking about status of review of revised RAP and Phase II. 4/30/14-Vought-Received reply from NYSDOH Pfeiffer that all of DEC's comments were discussed and addressed with AKRF and he inquired if DEC reached out to AKRF with our concerns and he noted NYSDOH Hettrick had no concerns. He requested program folks at DOH to work with DEC to determine whether DOH can post the Phase II and RAP in its current form or DEC an address its remaining concerns through a separate avenue or whether additional edits need to be communicated to AKRF. Vought sent reply to NYSDOH Pfeiffer that Justin, At your suggestion I just called and spoke to Marcus Simmons from AKRF and he noted that my summary email with requirements on the Phase II and RAP nor the Word Versions with my suggested edits were ever sent to AKRF (due to reported FOIL concerns) and only conceptual edits were discussed by NYSDOH. This seems to be the source of error in the process. I went a step further this morning and reviewed my major edits again to the Phase II and RAP with him over the phone. If we cannot send my edited versions of the RAP and Phase II to him, do you have any other suggestions? If need be I can call him and dictate word for word my specific edits but I am not sure if I can do this as NYSDOH is the lead agency. As always the most effective way is to send him my summary email and edited RAP and Phase II. Please advise as I know time is of the essence, -Jeff 4/30/14-Vought-Sent email comments from 4/17 with suggested edits on RAP and Phase II to AKRF Simons as per NYSDOH Pfeiffer. Vought received call from and spoke to AKRF Simons who received edited RAP and Phase II and Vought reviewed and clarified edits. AKRF Simons will submit revisions to NYSDOH and Vought noted that DEC review was not needed as Vought reviewed edits specifically with AKRF and also due to time constraints as per NYSDOH. After NYSDOH approves Phase II and RAP it will be posted for the public as per SEQR. 5/2/14-Vought-Email from DEC Panzone that he received call from and Bruce Noble about status of his reply. Vought sent copy of 4/30/14 update above to DEC Panzone. DEC Panzone sent reply to Bruce Noble that Dear Mr. Noble:We appreciate your concern with regards to this project. Please be advised that the developer for this proposed site has not applied to be in the New York State Brownfield Cleanup Program (BCP). This is a voluntary program in which the developer can apply for tax credits in exchange for addressing the site contamination,with New York State Department of Environmental Conservation (NYSDEC) and New York State Department of Health (NYSDOH) oversight. For information on the NYS Brownfield Cleanup Program, visit: <http://www.dec.ny.gov/chemical/8450.html>. Furthermore, the site would not qualify to be addressed as a State Superfund site because it would not satisfy the criteria for that program. In other words, there is not enough contamination present on-site to be addressed in the Superfund program. However, I would like to add that this site has petroleum contamination which is being addressed through our NYSDEC Spill Remediation program. For your information, you may refer to Spill # 1306324. For information on DEC's Spill Incidents Database, visit:

POTENTIAL JEWISH HOME LIFECARE BUILDING (Continued)

S113916086

<http://www.dec.ny.gov/cfm/xtapps/derexternal/index.cfm?pageid=2>.
Once you have gotten to the Spills Incidents Database, put in the Spill # and you can get access to information on that Spill.
Furthermore, with regards to NYSDEC concerns, lead contamination at the site is not a significant threat to require further action.
Regardless, the Spill Remediation plan for the site consists of a proposal to excavate all materials down to 20'bg (below ground surface - bedrock) which will remove also the majority of soils that contain the lead, {Semi-Volatile Organic Compounds (SVOCs) and Volatile Organic Compounds (VOCs) from the site.} Upon completion of the excavation, samples will be collected for both SVOC and VOC analyses and the results submitted to NYSDEC and NYSDOH. SVOC levels noted currently at the site, however, are NOT significant to warrant further concern as they are commonly associated with fill materials throughout NYC. Furthermore a moisture barrier and vapor barrier (as per NYSDOH and NYSDEC specifications) will be installed under the new development to ensure no chance of vapor intrusion for SVOCs and VOCs if they cannot be feasibly be removed as part of the development. Sincerely, Noble replied to Panzone that Thank you for your reply. I intentionally gave you a lot of time to respond before calling you. I regret that I misunderstood the basis of the Brownfields Program. I think now that its purpose was to provide support, both technical and ultimately financial, to new owners of previously polluted sites. I have prepared a response that reveals a little of what I think is going on at the site. I'll save that for another day. Have a good weekend, or a good week if you are reading this on Monday morning. There will be a press conference on Thursday. 5/5/14-Vought-DEC Panzone sent email to Noble that Dear Mr. Noble: Thank you very much for your response. The BCP is meant to encourage the cleanup of polluted sites so that they can no longer be a financial burden on the community. As previously mentioned, the project that you were referring to does not meet the qualifications for either BCP or State Superfund. In addition, the petroleum contamination is already being dealt with through a separate program. Please enjoy your week and if you have any further questions, please contact us. Noble replied to Panzone that Dear Mr. Panzone, I now know that the City is in charge of the EQR, not the state. I read in the DEC regs that in a Brownfield or similar cleanup, the DEC provides a site manager to ensure that the environment and the public are kept safe during the removal of hazardous materials. Can you tell me if the New York City OER or DEP would be in position to have someone named Project Manager? The levels of lead in this project are extremely high. There is some question whether agents or employees of the lead agency, the State Department of Health, would be the right people to monitor for lead danger, as they have partnered with the developer of the project for nine years. The DEIS totally dismisses the fact that lead from the soil, in concentrations as high as 3,850 PPM, will have a probable impact. If you could answer my question about a project manager in the next 48 hours, I would be deeply appreciative. Vought sent email to DEC Panzone with suggested edits on reply to Mr Noble with cc to RE, RSE, DEC Cozzy, OER Chawla. 5/5/14-Vought-Received call from and spoke to Martin Rosenblatt (martinrosenblatt@hotmail.com Ph:917-972-8105) who formerly worked for NYC Public Advocates Office and also worked for Mario Cuomo as well. Rosenblatt lives across street from site and is a concerned citizen and was informed of development associated with open spill 1306324 and had attended a prior public meeting as well. Rosenblatt

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

POTENTIAL JEWISH HOME LIFECARE BUILDING (Continued)

S113916086

was referred to Vought by RSE. Rosenblatt had concerns with contamination on-site and Vought summarized scope of work including DEC review and approval of Phase II and RAP that included excavation of site to bedrock with installation of vapor/moisture barrier. Vought also noted lead agency was NYSDOH. Rosenblatt inquired about a Toxics Targeting Report that noted that site was not up to standards and requested explanation and Vought provided explanation of CP51 Guidance. Vought requested that Rosenblatt inform DEC if he has any other questions or observations of the site that are of concern (eg vapors). Vought sent email to DEC Panzone, with cc to RSE and Paul John, NYSDOH Hettrick and NYSDOH Pfeiffer. 5/7/14-Vought-Called and spoke to AKRF Marcus Simons and revised Phase II and RAP were posted for public review and public meeting scheduled for tonight and attendees will include NYSDOH and AKRF. Simons noted that Phase II and RAP would most likely have 30-60 day public comment period and that he was anticipating and increased number of inquiries to DEC after the public meeting tonight. 5/7/14-Vought-Received email from OER Chawla that he forwarded email dated 5/6 to OER Walsh. DEC Panzone replied to OER Chawla with request if he could provided Chawla's contact information to Mr. Noble. Vought received email from AKRF Simons that FYI - all the materials are publicly posted at http://www.health.ny.gov/facilities/cons/environmental_quality_review/jewish_home_lifecare/ The comment period is a minimum of 10 days but will likely be longer given the controversial nature of the project. I'll let you know if anything spill/petroleum-related is raised at the hearings (tonight and tomorrow). OER Walsh sent email to all parties (Vought, RE, RSEm, DEC Cozzy and DEC Panzone) that it was better for DEC not to refer Noble to them as they did not have regulatory authority over the site. DEC Panzone sent email to Noble that Dear Mr. Noble:I suggest that you contact the New York City Department of Environmental Protection, for a response to your question concerning the project manager. Here is their contact information below:
http://www.nyc.gov/html/dep/html/contact_us/index.shtml New York City Department of Environmental Protection Office of Public Affairs (718) 595-6600 FYI, the NYC Office of Environmental Remediation has no actions pending on this site and no regulatory authority over it. Furthermore, based on the links you sent last week, the City is not in charge of the environmental review process. The State is in charge of SEQR (State Environmental Quality Review) and NYSDOH is the lead agency. Also, you brought up your concerns with respect to lead. Lead contamination at the site is not a significant threat to require further action, but noted that regardless, soils would be excavated down to bedrock. OER Chawla sent email to all that Tom, This property is going through CEQR. Tell him to contact Maurizio Bertini, copied here. Maurizio is aware of pending CEQR process on this property. Shaminder. Vought forwarded string via email as FYI to NYSDOH Pfeiffer and NYSDOH Hettrick. DEC Panzone sent another email to Noble with cc to DEP Bertini that Dear Mr. Noble: I apologize for providing you with incorrect information in my previous email. This property is going through the CEQR process, as you had correctly stated. Please contact Mr. Maurizio Bertini (CC'd above) from the New York City Department of Environmental Protection for additional information. 5/8/14-Vought-Received email from DEC John with attached CCU #201402659 with letter from Assembly Member Daniel O'Donnell dated 5/1/14 that was ssent to Commissioner Martens. Letter notes that lot is known to contain lead and other toxi materials and that the DEIS

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

POTENTIAL JEWISH HOME LIFECARE BUILDING (Continued)

S113916086

provides the averages and ranges of a few hazardous materials found - particularly lead-but it does not give specifics, no is it comprehensive. Letter also notes that I request that your agency, given its expertise and responsibility for dealing with hazardous materials, obtain and assess the results of all hazardous materials testing done for the New York State Department of Health DEIS. Letter also notes that his community and he himself contributed a great deal in the way of public comment to the DEIS. Vought added CCU to D2. 5/9/14-Vought-Sent draft response to DEC Rivera for CCU with respect to petroleum and deferred response regarding lead to RHWRE and DEC Cozzy. Added finalized Phase II and RAP to D2. DEC Panzone sent background info to DEC Rivera to assist in preparation of response to CCU. Received email from DEP Bertini that OER contacted both the NYC Office of Environmental Coordination (OEC) and the NYC Department of Environmental Protection (DEP-BEPA) to inquire if any official review was underway regarding this site. Both agencies confirmed, after reviewing documents related to the SEQRA review, that the City does not have jurisdiction if a State SEQRA review occurs for a project in NYC that does not include any City discretionary actions. In addition, the reference/commitment in the DEIS Haz Mat section that a State Dept. of Health approved RAP and CHASP will prevent any exposure to hazardous materials would insure protection of public health. Let me know if you have any questions. 5/12/14-Vought-Received email from DEC John that 5/9 Draft response to CCU email by Vought needed to be more complete and is to include documents DEC reviewed, DER determination of significant threat, summary of our comments on the RAP and Phase II, how we responded to community inquiry and how CHASP is overseen by DOH to cover concerns during all site work including excavation. 5/14/14-Vought-Email from DEC John to NYSDOH Demings that DEC is preparing response to letter to Commissioner from Assemblyman requesting DEC to assess all Haz Mat testing and request for advisement if NYSDOH has the results for all such testing and assessed results. Demings noted he would look into it today and get back to DEC John shortly. Vought sent DEC John more complete response to CCU for edits by John prior to submission to Rivera. DEC John made edits to CCU response sent to DEC Rivera. DEC John also called and spoke to NYSDOH Pfeiffer and sent a copy of the Assembly Member inquiry to him as well as our draft response. 6/2/14-Vought-Called AKRF Simmons for an update and they have been receiving public comments and he will inquire as to when public comment period is over and send information to Vought. Vought spoke with DEC Panzone who noted that no additional inquiries have been received. 6/3/14-Vought-Received email from AKRF Simons that The comment period is now closed but it'll be 2 to 3 weeks before AKRF gets a draft of a Response to Comments document to DOH. Vought sent email reply that Marcus, Many thanks for the information and please keep me posted on any comments and responses relevant to the petroleum spill, if allowed by NYSDOH, who I have copied above. Thanks. Vought also received email from AKRF Simons that I can't find any documentation that NYSDEC approved the RAP/CHASP - item 8 of http://www.health.ny.gov/facilities/cons/environmental_quality_review/jewish_home_lifecare/. If you sent something to DOH can you provide me with a copy. Otherwise, is it possible to generate a brief letter? Thanks - Marcus. Vought drafted and sent letter to all parties that RAP and Phase II were approved with respect to petroleum contamination. Vought also added letter to D2. 6/6/14-Vought-Received call from and spoke to NYSDOH Demming who received draft CCU Response

POTENTIAL JEWISH HOME LIFECARE BUILDING (Continued)

S113916086

from Gene Leff who sent it to his director. Demings reviewed draft and wanted to confirm that Restricted Soil Standards were acceptable for backfill and also that for the petroleum spill the goal will be Unrestricted Soil Standards to the extent feasible and Vought confirmed and agreed to edits. 6/18/14-Vought-Received email from NYSDOH Joseph Henry (Program Research Specialist Ph:518-402-0935) that Hello Jeffrey, Do you have a problem with DOH posting the attached document from DEC on its website? Please advise. Thank you. Vought replied with cc to RE, RSE, DEC Rivera and DEC Panzone that Henry, The letter is a standard approval letter, and is subject to FOIL, however, just to be sure I have copied both Tom Panzone (our DEC Citizen Participation Specialist) as well as Rodney Rivera (our DEC Special Assistant) who have both been involved in this spill and are our regional media experts, in hopes that they may respond to your inquiry below. I have reattached the document below for their reference as well. Thanks, DEC Rivera sent reply that he checked with OGC Oliva and it was okay to post letter and DOH Henry replied with thanks. 6/25/14-Vought-Sent email to AKRF Simons with cc to NYSDOH Pfeiffer and Hettrick that Marcus, Any updates on the below? We are looking forward to receiving the Draft Response to Comments prepared by AKRF with respect to petroleum contamination and I will also be on vacation from 7/2-7/15 and this is a Visible Issue being tracked by our higher-ups. Also, if there is are comments, how long do we have to prepare a response? I am trying to gauge if this issue will arise while I am on vacation, if I have to assign another temporary DEC Project Manager or I can see to it upon my return, if necessary. Thanks for any foresight you can provide. Received callback from AKRF Simons who noted that he hopes to have his Draft Response to NYSDOH by 7/4 but also noted that the finalized Response would hopefully be back to the public by late August or early September (and as such no reassignment needed while Vought on vacation). 7/16/14-Vought-Sent email to AKRF Simons that Marcus, As my supervisors are requesting weekly updates on the above, I was hoping that you could provide an update on the Draft Response to Public Comments which you noted was scheduled to be submitted to DOH by 7/4/14. Also as we discussed the Department would like an opportunity to review and comment on the Draft with respect to any petroleum issues before it is finalized. Many thanks . 7/17/14-Vought-Received email from AKRF Simons that Due to the volume and extent of public comments, the applicant team is still working on the FEIS and Response to DEIS comments. It is also our understanding that, after we submit draft responses to NYSDOH, NYSDOH, as lead agency, will coordinate review and comments with other interested agencies, including NYSDEC. 8/6/14-Vought-Sent reply to 7/17 email with cc to NYSDOH that 'Marcus, Thanks for the below update and we look forward to receiving any possible petroleum related comments from NYSDOH. As this site is still a visible issue with my superior and requires weekly reporting, any approximate time frame on when the FEIS and Response to DEIS comments will be drafted?. Many thanks as always. 8/7/14-Vought-Received email with attached final response on CCU from DEC Martens to Daniel O'Donnell. Vought added response to D2 and forward to all parties. Letter thanked O'Donnell for his letters, noted documents reviewed by DEC, that lead did not constitute a significant threat and that DEC had no basis for requiring remediation based on lead in the soil . Letter noted that it was working on petroleum spill in southeastern portion of property, note that goal was unrestricted SCOs and a provision for immediate vapor complaints from the public and implementing of

S113916086

sampling frequency and also a note that the CHASP has a provision for air and dust monitoring. 8/19/14-Vought-Received a call from and spoke to AKRF Simons who noted that the draft Response to Comments was sent to NYSDOH for review on 8/15. Marcus also noted that response to CCU sent by DEC Martens was incorrect in that it noted that one of the 38 soil samples.. exceeded Unrestricted Use when in actuality it was 24 samples that exceeded Unrestricted Use. PERSONAL NOTE: This language not drafted by spills as spills only drafted portions related to petroleum for review by DEC Rivera. Vought spoke to to RSE as well as DEC Rivera who conferred with Regional Director on issue. RSE also spoke with DEC John on issue as all parties received email form DEC Shick who was notified by Eugene Leff of possible error. Email chain from DEC Schick included email sent by DASNY Jack Homkow to DEC Lawrence Weintraub that Larry, DASNY is providing technical and administrative SEQR and CEQR services to NYSDOH for its Construction Application Approval for the proposed Jewish Home Lifecare Nursing Facility in Manhattan. I am writing regarding the attached letter from Commissioner Martens to a local NYC Assemblymember, which we believe has an incorrect statement regarding lead sampling results on the development site that needs to be revised, as we would like to include the letter in the FEIS. It is a very contentious application with the community. DASNY and NYSDOH think that what was accurately observed by the environmental consultants is only three exceedances of the commercial use Soil Cleanup Objectives (SCOs), not one exceedance of unrestricted use SCOs as stated in the letter. As specified in the DEIS, Only certain SVOCs and metals exceeded Subpart 375 Restricted Residential Soil Cleanup Objectives (RRSCOs), which assume site use as multifamily residences with some potential for soil contact. In particular, lead levels in 3 of the 38 soil samples exceeded 1,000 parts per million (ppm) with a maximum of 3,850 ppm, but the average lead level was 290 ppm. The average lead level in the samples from the top 6 inches of tree pits was 304 ppm (maximum 681 ppm). I will try calling you shortly to discuss. If you would like to call me sooner, I can be reached by cell phone today at 917 767-5122. Cordially, Jack. DEC Weintrob sent email to DEC Shick with cc to DEC Leff that Bob, Gene suggested that I forward this correspondence from Jack Homkow of the Dormitory Authority to you. Gene suggested that we look into whether Jack is correct and get back to him. The Dormitory Authority is looking to finalize the EIS on this project and would be look for a response in a few days. Jack Homkow can be contacted directly. Larry. As per RSE and DEC John, DEC Rivera to send response to Shick and all parties. DEC Rivera later sent email that he had made an error condensing suggested language by RHWRE and he also inquired to RHWRE/DEC Cozzy to be prepared to have correct number of samples that exceeded Unrestricted for lead. DEC Rivera drafted letter to Assemblyman O'Donnell correcting error and sent to all parties for review and letter to be reviewed by Haz Waste as per RSE. DEC Shick and DEC John then replied with suggested edits to Rivera. DEC John, RSE, RHWRE, Vought and Rivera held meeting to discuss suggested edits to Assemblyman letter and RHWRE and Rivera to followup with DEC Cozzy on number of samples exceeding Unrestricted SCO's. 8/26/14-Vought-Received hardcopy of draft with RHWRE edits and Vought added additional edits and received concurrence from the RSE. Vought sent draft to RHWRE with cc to Rivera, Cozzy, RSE and RE as per Rivera. 8/27/14-Vought-RHWRE noted via email that she did not have any anything else to add and she inquired to DEC Rivera if she should

S113916086

send it to DEC Schick. Rivera noted that DEC Schick and Leff to make decision on whether to send letter to DASNY first or to the Assemblyman first or both simultaneously. In separate email RWHRE sent draft to DEC Schick for approval and to decide who to send it to and in what format. 8/28/14-Vought-Received forwarded email from DEC John from NYSDOH Abel that DASNY requested that the letter be addressed to DEIS Lead Agency (NYSDOH) as DASNY is only assisting NYSDOH. DEC Rivera asked that DEC John notify DEC Schick that DASNY requested letter be addressed to NYSDOH. 9/2/14-Vought-Received email from NYSDOH Pfeiffer that Hi Jeff, It was suggested that we send DEC the draft Response to Comments on the JHL DEIS, for review of the section relating to Hazardous Materials. Would you be the rights person review that or, if not, who would be? Thanks, Justin. Vought sent reply that Justin, Our DER Remediation Section A has reviewed the site in relation to Hazardous Materials and my section (Spills) will has reviewed the site in with respect to petroleum. I am hoping that Jane O'Connell and/or Bob Cozzy (copied above) who represent Section A and Central Office hazardous waste remediation can respond to your query for review of the draft in relation to hazardous materials. I will review the draft Response with respect to petroleum next week. When do we need to get back to you with the results of our review? Thanks for keeping us in the loop as well. . Vought forwarded copy of draft Response to RWHRE and DEC Cozzy. Vought received reply from NYSDOH Pfeiffer that Thanks, Jeff. We d like to have feedback as soon as reasonably possible. Does COB of Friday, 9/12, sound workable? . Justin, Spills will make every effort to review the draft with respect to petroleum by 9/12 but I am not sure of Section A/Central office review with respect to hazardous materials. I am hoping that they again can respond via this email with respect to the feasibility of your request for review on the hazardous materials portions by 9/12. Email from DEC John to DEC Schick informing him that Spills was contacted by NYSDOH Pfeiffer as to who will be reviewing draft DEIS with respect to hazardous materials. 9/3/14-Vought-Email from DEC Cozzy to NYSDOH Pfeiffer with to RWHRE that Justin, I m not sure who asked you to have DEC s haz waste people review the DEIS, but we are normally only involved in the remediation of sites which contain Hazardous Wastes/Substances and are in one of our remedial programs. I don t believe we have a role in reviewing the DEIS for this project. We have previously reviewed the data, based on a request to assess whether this site might rise to the level of being listed on our Registry of Inactive hazardous waste disposal sites, and we determined it does not rise to that level. Beyond that review, I don t see a role for us with this project. Let me know if I am missing something here. Bob. Vought forwarded email to DEC John and RSE. NYSDOH Pfeiffer replied that Bob, If you d prefer not to review it, that s fine by me. We wanted to give DEC the opportunity, considering that your Commissioner publicly responded to inquiries about this project, Jeff reviewed the RAP and CHASP, and there may be more inquiries to DEC in the future. Justin. 9/8/14-Vought-Discussed above most recent correspondence in an impromptu meeting with DEC Rivera, John and Austin and all agreed that Spills will not review draft response to comments as per email above with DEC Cozzy and Pfeiffer. Vought forwarded email to DEC Rivera with cc to DEC Cozzy, RHWRE, RSE, RE as per his request. 9/23/14-Vought-Copied on email from DEC Paul John to DEC Rivera with cc to DEC Schick, RHWRE, DEC Conlon, DEC Leff and DEC Oliva that he received call from DASNY Jack Hokow who informed him that DASNY or

NYSDOH have not received the CCU clarification letter and they wanted to include it in the FEIS. DEC Rivera replied to DEC John that approval needed from Schick and Leff and that CCU may not need to be involved as inquiry did not come from Assemblyman to DEC. DEC Leff replied with further guidance to DEC Rivera, RHWRE, DEC John and DEC Oliva with cc to DEC Schick and DEC Conlon. 9/24/14-Vought-DEC John sent CCU clarification to DASNY Jack Homkow with a cc to DEC Rivera, RHWRE and DEC Schick. Vought added clarification letter to D2. DEC Schick also sent email to Leff that DEC John will respond to DASNY with a cc to the Assemblyman. 10/1/14-Vought-Cc'd on email from DEC John that he received call from and spoke to DASNY Hokow who noted that letter was acceptable and would be incorporated into FEIS. 4/29/15-Vought-Vought called and spoke to AKRF Simons for update on site status and Simons noted that the FEIS was completed however work had not begun as there were currently two lawsuits, including one that was an Article 78 suit, against the NYSDOH. 9/9/15-Vought-Called AKRF Simons and left message to return call with status of site and lawsuit. 3/30/16-Vought-Spoke with AKRF Simons at NYCOER regarding meeting for separate spill site and Simons noted that lawsuit is still ongoing and as such there are no updates on excavation associated with development. 3/1/17-Vought-Called AKRF Simons (Ph:646-388-9527) for update on site and Simons noted that lawsuit was filed and decision was reached that upheld NYSDOH as experts and he was unsure if decision would be appealed. He noted that project was still on and he will inquire to his planning section and send Vought an email if there was significant news. He also confirmed that AKRF would be informed of any possible development as work needed to be performed in accordance with the RAP. 3/2/17-Vought-Received email from Marcus Simons on 3/2/17 that It is our understanding that they plan to break ground for the new building in Spring 2018. It is possible that the soil removal for the spill could happen before this. Either way, they are well aware that there are requirements related both to the RAP/CHASP and the Spill. Vought sent reply to AKRF Simons with cc to NYSDOH Hughes and AKRF Lau that Marcus, Thanks for the update. Please keep me informed on the development as soon as you hear of it. Upon hearing from you, I will send an update to all the numerous parties that were involved as well as a refresher as it will be two years or so since we all worked on, and approved, the work plans. AKRF Simons replied that Will do. I'll let you know as soon as we hear anything. DEC Requires: 1)Cc to DEC Martinkat, RHWRE, DEC John, DEC Panzone (due to DNA Info article), RSE, AKRF Simmons, AKRF Bychkov, AKRF Lau, NYSDOH Pfeiffer, NYSDOH Hettrick and NYSDOH Justin Deming and NYSDOH Hughes, DEP Bertini. 2)Work performed in accordance with RAP that DEC made edits to on 4/30/14 including: Collection of endpoint samples; vapor mitigation or moisture barrier and submission of a Spill Closure Report after work is performed with results. 3)E-docking of final version (once received) of: Phase II, RAP, CHASP, DEIS, Summary Site Plans."

Remarks: "Paved parking lot. Preliminary soil testing. Area will be dug when construction starts."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SANGESLAND 12/14/2000 Sangesland spoke with Robert Forgraves (co-op board member - 212-885-4460) He said to contact Jeffery Kahan. 12/15/2000 Sangesland went to the site and met Brian Mackey from L & C Burner Service Inc. (718-842-9000)and Jeffrey Kahan Managing Agent for Co-op (home #212-874-1854) Problem was with the fill line to a 275 gal tank in sidewalk vault/basement area. Oil covered basement floor under oil tank. Sangesland directed L & C to have the area cleaned and then epoxy painted to seal out petroleum smell. L & C also said they are rebuilding the fill line and vent line system, so the leak problem will not happen again. 12/18/2000 Sangesland called to follow up on the clean up. L & C contacted A.L. Eastmond who cleaned and epoxy painted the floor. Spill closed 1/18/2001 Jeffrey Kahan (building manager) sent a letter with receipts showing L&C Burner Service installed a new fill line and Eastmond did a cleanup and epoxy painted the floor."
Remarks: "CALLER REPORTING A SPILL OF MATERIAL FROM A HOLE IN AN OIL TANK WHICH IS LEAKING MATERIAL INTO THE BASEMENT OF THE RESIDENCE CALLER WANTED TO REMAIN ANAMYOUS STATES THIS HAS HAPPENED THE LAST FOR TIMES AN OIL DELIEVERY WAS MADE"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
