1. Introduction

Roux Environmental Engineering and Geology, D.P.C. (Roux), on behalf of the SV-B Owners LLC (referred to herein as the Requestor), has prepared this Remedial Investigation Work Plan (RIWP) for the Sendero Verde Redevelopment Project – Parcel B (Site). The Site is bounded by Park and Madison Avenues and East 111th Street and East 112th Street, occupying Tax Block 1617, Lot 20, in the Borough of the Manhattan, City and State of New York (Figure 1).

The Site is located in the East Harlem section of Manhattan and is currently vacant. Most recent uses of the Site include a baseball field with community gardens on the eastern and southwestern Site perimeters. The community gardens were vacated in February 2018, and several shanty structures and garbage / debris remain in these areas. There are no permanent structures on the Site. The current Site conditions are shown on Figure 2. The Site encompasses an area of approximately 1.36 acres and will be investigated and properly addressed under the New York State Department of Environmental Conservation (NYSDEC) Brownfield Cleanup Program (BCP). The planned redevelopment of the Site includes the construction of Building B-North, which will consist of a 15-story building with a footprint of approximately 21,364 square feet; most of the of the community facility space will be held within Building B-North. Building B-Southwill consist of a ten-story building with a footprint of approximately 9,960 square feet. The buildings will be interconnected with a raised courtyard, which will be built over the Building B-North community facility space. Upon construction completion, the aforementioned community gardens will be relocated and reincorporated into the project on the southwest and southeast corners of the Site. The proposed redevelopment plan is included as Appendix A.

1.1 BCP Application and Environmental Work Plans

Due to the presence of contaminated soil, groundwater, and soil vapor at the Site, the Requestor plans to remediate the Site under the NYSDEC BCP. SV-B Owners LLC is submitting a NYSDEC BCP application concurrently with this RIWP, as a Volunteer. A Brownfield Cleanup Agreement (BCA) has not yet been executed and a site number has yet to be assigned to the Site. This RIWP was developed in accordance with the DER-10 Technical Guidance for Site Investigation and Remediation, dated May 2010 (DER-10).

The purpose of the RI is to determine the nature and extent of contamination at the Site, characterize environmental media, qualitatively assess the potential exposure of receptors to Site contaminants, and develop any other additional data necessary to support the development of a Remedial Action Work Plan (RAWP).

1.2 RIWP Document Organization

This RIWP contains a background section (Section 2) describing the Site, its history, and results of previous environmental investigations; a section defining the objectives and scope of the RI (Section 3); and Sections 4 and 5 describe project operations plans (e.g., Quality Assurance/Quality Control, Health and Safety). Reporting requirements and the project schedule are discussed in Section 6. Figures are provided to illustrate Site conditions and the locations of proposed sampling efforts.

1.3 Project Team and Contact Information

Roux's Principal-In-Charge and Engineer of Record for this Site will be Noelle Clarke, P.E., Principal Engineer. Ms. Clarke, who is based in Roux's Islandia, New York headquarters office and can be reached

at (631) 232-2600, will be responsible for the overall implementation of the project. Roux’s Project Manager will be Julie Moriarity, Project Scientist, who will be responsible for day-to-day management of the project, including preparation of work plans, scoping, and directing field activities. The Field Manager for the duration of the project is yet to be determined and will be responsible for implementing and directing field activities on-site.

The name and contact information for the SV-B Owners LLC is:

Ms. Jessica Yoon
SV-B Owners LLC
1865 Palmer Avenue, Floor 2
Larchmont, New York 10538

Drilling, analytical, waste disposal, and other subcontracted services have not been selected as of preparation of this RIWP. This information will be provided to NYSDEC prior to the start of field activities.

1.4 Certification

I, Noelle Clarke, certify that I am currently a Qualified Environmental Professional as defined in 6 New York Code of Rules and Regulations (NYCRR) Part 375 and that this Remedial Investigation Work Plan was prepared in accordance with all applicable statutes and regulations and in substantial conformance with the DER-10.

<u>Noelle Clarke, P.E.</u>	<u>November 28, 2018</u>	
Qualified Environmental Professional	Date	Signature

2. Background

This section provides pertinent background information, including a description of the Site and its setting, the history of the Site, and the results of previous environmental work conducted at the Site.

2.1 Site Description and Setting

A Site location map is included as Figure 1.

Property Location	
Property Name:	Sendero Verde Redevelopment Project – Parcel B
Property Address:	No physical address is available at this time.
Property Town, County, State:	Neighborhood of East Harlem, New York, New York
Property Tax Identification:	Tax Block 1617, Lot 20
Property Topographic Quadrangle:	USGS – Central Park Quadrangle
Nearest Intersection:	The Site is bounded by Park and Madison Avenues and East 111 th Street and East 112 th Street.
Area Description:	The Site is currently open vacant space. Most recently, the Site was occupied by a baseball field with community gardens surrounding the eastern and southwestern Site perimeter. The Site is located in a mixed-use area of East Harlem, Manhattan, New York. There are multiple high-rise residential buildings to the north; to the west, beyond Lots 21 and 120 and Madison Avenue, is a part five-, part seven-story residential building; to the south are multiple mixed use commercial and residential high-rise buildings; to the east is Park Avenue and the elevated Metro North Railroad Tracks beyond which is a playground belonging to a public school.

Property Information	
Property Acreage:	Approximately 1.36 acres
Property Shape:	Irregular
Property Use:	Tax Lot 20 contains a vacant space that was formerly used as a baseball field with community gardens surrounding the eastern and southwestern Site perimeter.
Improvements:	None currently apart from several shanty structures in the former community garden areas.

Information regarding elevation, regional groundwater flow direction(s), Federal United States Geological Society (USGS) well information, Federal Reporting Data System (FRDS) Public Water Supply system information, and state database well information was derived from an Environmental Data Resources, Inc. (EDR) GeoCheck® Report that was included as part of the March 2018 Phase I Environmental Site Assessment (ESA) prepared by Roux. As a note, the Roux Phase I ESA was completed before Lot 20 and adjacent Lot 120 were separated into two lots and, therefore, included land that is not part of the proposed BCP Site. The EDR report is included within the Phase I ESA, which is included as Appendix B.

2.1.1 Property Operations

The Site is currently a vacant lot and is currently owned by the City of New York, c/o New York City Housing Preservation and Development, located at 100 Gold Street in New York, New York. The contact for the Site operator is to be determined.

2.1.2 Utilities

Based on observations made during the Site reconnaissance and the Roux 2018 Phase II ESA, no utilities appear to be in current use at the subject property due to lack of permanent structures.

2.1.3 Topography

The grade at the Site is relatively flat, as shown in the USGS 7.5-Minute Series Topographic Map – Central Park Quadrangle. The elevation of the Site and surrounding area is approximately 18 feet above mean sea level (msl).

2.1.4 Wetland Areas and Surface Water Bodies

According to the EDR report, the Site is not located in, or adjacent to, regulated wetlands. A portion of the Site is located in the 500-year flood zone. The nearest water body is the Harlem River, which is located approximately 0.65 miles to the southeast of the Site.

2.1.5 Soil

Based on data from Roux's Phase II ESA, dated June 2018, the shallow deposits at the Site are typical of fill material found in urban environments and that of which would be found after building demolition. This urban fill material overlies deeper native deposits consisting of mostly medium to coarse sands and gravel with varying amounts of fine sand and clay. Bedrock was not encountered during the Roux Phase II ESA. The Phase II ESA is included as Appendix B.

2.1.6 Underlying Formation

During geotechnical investigations completed by others in 2017 and 2018, the following native strata were observed beneath the urban fill layer:

- Upper sand and silt generally comprised of brown medium to fine sand and silt with varying amounts of gravel with an estimated thickness of 25 feet;
- Varved silt and clay generally comprised of gray-brown varved silt and clay and little to trace amounts of fine sand with an estimated thickness of 40 feet;
- Lower sand and silt generally comprised of gray-brown coarse to fine sand and silt, with varying amounts of gravel with an estimated thickness of 25 feet;
- Soft rock generally comprised of grey coarse to fine grained schist and other multicolored rock that was highly weathered and highly fractured with near vertical fractures and a variable thickness from three to 18 feet; and
- Intermediate to hard sound rock generally comprised of grey coarse to fine grained schist that was moderately fractured and slightly weathered. Depth to bedrock varied across the Site from 80 to more than 120 feet below grade.

2.1.7 Groundwater

Based on data from the 2018 Roux Phase II ESA, the average depth to groundwater ranged from 10 to 13 feet below land surface (bls). A formal groundwater flow direction study has not been conducted at the Site. Groundwater flow direction is likely influenced by subsurface utilities, local dewatering projects, bedrock topography, subway tunnels, and other subsurface features. The direction of groundwater flow in the area of the Site is assumed to be southeast toward the Harlem River.

2.1.8 Neighboring Properties

The Site is located in a highly developed urban area of Manhattan consisting primarily of residential and commercial structures. To the north of the Site, beyond East 112th Street, there are multiple high-rise residential buildings. To the south of the Site, beyond East 111th Street, there are several multiple mixed use commercial and residential high-rise buildings. To the east of the Site, beyond Park Avenue, there are elevated Metro North Railroad Tracks beyond which is a playground belonging to a public school. To the west of the Site, beyond lots 21 and 120 and Madison Avenue, there is a part five, part seven-story residential building.

A review of neighboring properties, public thoroughfares, and research of available information regarding the neighboring properties, was performed to identify areas of offsite environmental concern that could potentially adversely impact the Site. As detailed in the environmental database report, an adjacent property to the north/northwest located within close proximity to the Site operated as a dry-cleaning facility in the past. The immediately adjacent property to the south, operated as an auto service station in the past. As detailed in the City Directory, nearby properties also included dental offices and paint shops. These historical operations may have potentially impacted the quality of the subsurface soil, soil vapor, and/or groundwater beneath the Site through on-Site migration of contaminants.

2.2 Site History

Roux evaluated the following information sources from EDR to determine historic uses of the property. These informational sources are included as appendices in 2018 Roux Phase I ESA, which is included as Appendix B.

- EDR Radius Map with GeoCheck, dated March 15, 2018 - EDR report (included as Appendix B within the Phase I ESA);
- Certified Sanborn Fire Insurance Maps dated 1896, 1911, 1939, 1951, 1968, 1969, 1979, 1980, 1982, 1986, 1989, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004, and 2005 (included as Appendix D within the Phase I ESA);
- Historical aerial photographs dated 1924, 1941, 1951, 1954, 1961, 1966, 1975, 1984, 1991, 1995, 2006, 2008, 2009, 2010, and 2011 (included as Appendix E within the Phase I ESA);
- United States Geological Survey (USGS) 15 Minute Topographic Maps, Harlem, New York Quadrangle dated 1897, 1898 and 1900; 7.5 Minute Topographic Maps, Central Park, New York Quadrangle dated 1947, 1956, 1966, 1979, 1997, and 2013 (included as Appendix F within the Phase I ESA);
- A search of the City Directory Abstract conducted by EDR (included as Appendix G within the Phase I ESA); and
- Environmental Lien Search (included as Appendix H within the Phase I ESA).

2.2.1 Radius Map

The Site was not identified in any of the searched environmental databases, which appears to be inconsistent with the City Directory, which indicates Continental Cleaners and Tailors (presumably a dry cleaner) was present at 56 East 111th Street in 1968.

Groundwater flow direction is assumed to be southeast toward the Harlem River. Several properties in the surrounding area were identified on the hazardous waste generator, manifest, and spills databases in the EDR report. These listings pertain to utility vaults in the street or on the sidewalk immediately adjacent to the Site. However, due to the containment within the vault or de minimis nature of the spill incidents prohibiting groundwater contamination, these properties are not considered to be an environmental concern in relation to the Site.

The following property is not considered to be a recognized environmental condition (REC) in relation to the Site, but is discussed since it is located immediately adjacent to the Site and was identified in one of the searched databases:

- The property identified as Lot 50, Tax Block 1616, located at 1665 Madison Avenue (immediately adjacent, hydraulically downgradient to the south/southwest, is listed on the E-Designation database. According to information contained within the EDR report, the property has been identified as an E-Designation (E-206) for Air Quality and Window Wall Attenuation & Alternate Ventilation protocol. In order to address the E-Designation, guidelines provided by the New York City Office of Environmental Remediation (NYCOER), the governing agency overseeing New York City's E-Designation program, should be followed.

The following properties are considered to be RECs in relation to the Site, since they are located adjacent to or in very close proximity to the Site, were identified in one or more of the searched databases and the potential exists that they may have impacted the Site:

- The property identified as Madison Cleaners, Inc., located 1716 Madison Avenue (0.07 miles from the Site; hydraulically cross-gradient to the north) is listed on the EDR Historical Cleaners database where the property was listed as operating as a dry cleaner from 1991 through 2014.
- The property identified as Woojin Eastmore Cleaners, located 1325 5th Avenue (0.09 miles from the Site; hydraulically upgradient to the west northwest) is listed on EDR Historical Cleaners database where the property was listed as operating as a dry cleaner from 2011 through 2014.
- The property identified as 84 E 76, located at 84 East 111th Street (0.01 miles from the Site; immediately hydraulically downgradient to the south) is listed on the EDR Historical Auto database where the property was listed as operating as an auto service station from 2002 through 2005.
- The property identified as Eastmore Cleaners, located at 1330 5th Avenue (0.1 miles from the Site; upgradient to the west northwest) is listed on the EDR Historical Cleaners database where the property was listed as potentially operating as a dry cleaner from 2007 through 2013.

2.2.2 City Directories

A city directory abstract (within the Phase I ESA in Appendix B) for the Site (and current Lot 120) was obtained from EDR. Records were reviewed at approximately five-year intervals for the time period of 1920 to 2014. Records reviewed for the time period 1920 to 2014 were sourced from the R.L. Polk & Company, New York Telephone, Manhattan and Bronx Directory Publishing Company Residential Directory, NYNEX Telephone, Cole Information Services, and Hill-Donnelly Information Services.

As indicated by the City Directory, 56 East 112th Street operated as Continental Tailors & Cleaners (assumed to be a dry cleaner) in 1968. Other noted operators/tenants of the Site included White Printer Department, Hyman Furrier, and Jonas Drug Company, Schweitzer Isaac Jennie Shoe Repair, Krals Novelty Shoe Co, and Hirsch Brandel Shoes.

The City Directory Abstract also includes listings for the surrounding properties. Nearby off-Site properties included tailors, dry goods stores, painters, restaurants, a hotel, meat markets, stationaries, dress shops, dental offices, botanical gardens, jewelers, and several residential dwellings.

2.2.3 Aerial Photographs

Historical aerial photography (within the Phase I ESA in Appendix B) may indicate past activities at a property that may not have been documented by other means or observed during a reconnaissance visit. Aerial photographs were obtained from EDR for the years ranging from 1924 to 2011.

According to a review of the historical aerial photographs, the Site appears to be developed since at least 1924 with several Site buildings and corroborates the development as shown in the Certified Sanborn Fire Insurance maps. Demolition of several Site buildings is first shown in the 1975 aerial photograph. The 1984 aerial photograph shows further demolition of Site buildings. The 1991 aerial photograph shows all Site buildings demolished. The general site layout and building structures appear generally consistent with the current Site configuration since 1991.

2.2.4 Certified Sanborn Maps

Certified Sanborn Maps were obtained from EDR for some years ranging from 1896 to 2005 (included within the Phase I in Appendix B). The following is a general summary from Roux’s review of the Site (and Lot 120) and surrounding property usage, as determined by the review of the Certified Sanborn Maps.

Date	Description
1896-1951	The Site is divided into 82 parcels. The perimeter of the Site is depicted as developed with multiple three- and five-story buildings; four of the buildings are described as residential. The various stores are described as “Paints,” “Chinese Laundry,” “Drugs,” and “Push Cart Storage.” The adjacent properties around the Site are depicted as developed with multiple two, four and five-story buildings.
1968-1980	The majority of the Site buildings have been demolished and appear vacant, with the exception of the buildings located in the westernmost portion and central southern portion of the Site. The neighboring properties to the north are depicted as redeveloped as the New York City Housing Authority Senator Robert A. Taft Houses Apartments. The buildings located in the northeastern and southeastern portion of the Site appear to have been demolished and are vacant.
1982	The majority of the Site buildings appear demolished and vacant with the exception of the buildings located in the westernmost portion of the Site. The adjacent property to the west, beyond Madison Avenue, appears redeveloped with an irregularly-shaped part five-, part seven-story building and is described as “Los Tres Unidos,” a residential apartment building containing 135 residential units.
1986-2005	All of the Site buildings have been demolished and the Site appears vacant. The adjacent properties to the east, beyond Park Avenue, are described as “Park and Playground.”

2.3 Environmental Conditions/Results of Previous Environmental Investigations

This section provides an overview of previous environmental-related activities completed at the Site, based on a review of readily available information and the following environmental reports (included within the Phase I in Appendix B). The following environmental reports were available for review:

- Phase I ESA, prepared by Roux, dated March 2018.
- Phase II ESA, prepared by Roux, dated June 2018.
- Amendment to the Phase II ESA, prepared by Roux, dated November 13, 2018.

Based on the 2018 Roux Phase II ESA, the Site (soil, groundwater, and soil gas) appears to have been impacted by polycyclic aromatic hydrocarbons (PAHs), metals, and pesticides originating from prior Site operations most likely associated with historic urban fill. The presence of these contaminants must be remediated for the proposed residential/commercial use. As a result, the NYSDEC BCP will be an appropriate program to complete investigation and remediation to ensure the redevelopment is protective of the public health and the environment. As part of the NYSDEC BCP, the Site will undergo additional investigations to delineate the nature and extent of contaminants pursuant to this RIWP.

2.3.1 Geophysical Survey

To identify and locate suspected existing and former USTs and other Site utilities, a geophysical survey was conducted. Beginning on April 11, 2018, Roux's geophysical subcontractor, Naeva Geophysics, Inc., of Congers, New York (Naeva), utilized an electromagnetic metal-detector and ground penetrating radar (GPR) to detect anomalies, collect GPR data profiles, and mark out any detected underground storage tanks (USTs) and other subsurface utilities. Naeva identified one suspected UST and 51 discrete anomalies, which were marked out accordingly. The suspected UST location is shown on Figure 3. Based on the results of the GPR, an additional soil boring was installed near the suspected UST.

2.3.2 Soil

Beginning on April 30, 2018, Roux's drilling subcontractor, Trinity, used a GeoProbe™ direct push drill rig to advance ten (10) soil borings to depths between ten ft bls and 20 ft bls. Soil was field screened for volatile organic compounds (VOCs) using a photoionization detector (PID). All soils were visually inspected for evidence of impacts (e.g., odors, staining, and visible free product), and the lithology was recorded according to the Unified Soils Classification System (USCS). Soil samples were collected continuously in five-foot increments for geologic logging and visual inspection. Groundwater was encountered from 10 to 13 ft bls during this investigation.

The Roux 2018 Phase II ESA indicates the primary contaminants of concern in soil are PAHs, metals, and pesticides. A total of ten (10) soil borings were completed during the Phase II ESA. At each soil boring, one (1) soil sample was collected from the 0-2' ft bls interval at each boring location (shallow sample). An additional soil sample was collected from the two-foot interval that exhibited the highest PID reading or the two-foot interval directly beneath the proposed maximum excavation depth. If the groundwater table interface was encountered before the proposed maximum excavation depth was reached and there were no signs of impacts, the soil sample was collected from the two-foot interval above the groundwater table interface (deep sample).

A total of 20 soil samples were collected and the laboratory analytical results for soil samples were compared to the NYSDEC Unrestricted Use Soil Cleanup Objectives (UUSCOs) and the NYSDEC Restricted Residential Use Soil Cleanup Objectives (RRSCOs) as presented in NYSDEC Part 375.6. The results of the soil sampling event (exceedances only) are summarized on Plate 1. Results of the laboratory analysis are discussed below:

- No VOCs were detected at a concentration above their respective UUSCOs or RRSCOs.
- One or more semivolatile organic compounds (SVOCs), including benzo(a)anthracene (maximum of 6,000 micrograms per kilogram [$\mu\text{g}/\text{kg}$] at SB-5, 0-2 ft bls), benzo(a)pyrene (maximum 6,200 $\mu\text{g}/\text{kg}$ at SB-5, 0-2 ft bls), benzo(b)fluoranthene (maximum of 10,000 $\mu\text{g}/\text{kg}$ at SB-5, 0-2 ft bls), chrysene (maximum of 7,200 $\mu\text{g}/\text{kg}$ at SB-5, 0-2 ft bls), dibenzo(a,h)anthracene (maximum of 1,000 $\mu\text{g}/\text{kg}$ at SB-5, 0-2 ft bls) and indeno(1,2,3-c,d)pyrene (maximum of 5,100 $\mu\text{g}/\text{kg}$ at SB-5, 0-2 ft bls), were detected at relatively low concentrations slightly above their respective UUSCOs and RRSCOs in shallow samples from six soil borings (SB-1, SB-4, SB-5, SB-6, SB-10 and SB-12) and deep samples from two soil borings (SB-1, SB-4). It should be noted that the UUSCOs and the RRSCOs for benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene and indeno(1,2,3-c,d)pyrene are the same value (1,000 $\mu\text{g}/\text{kg}$).
- One or more metals, including arsenic (maximum of 29.5 milligrams per kilogram [mg/kg] at SB-11, 8-10 ft bls), barium (maximum of 564 mg/kg at SB-6, 0-2 ft bls), copper (maximum of 5,060 mg/kg at SB-1, 0-2 ft bls) and lead (maximum of 820 mg/kg at SB-1, 12-14 ft bls), were detected at concentrations above their respective UUSCOs and RRSCOs in shallow samples from nine soil borings (SB-1, SB-4, SB-5, SB-6, SB-7, SB-8, SB-10, SB-11, SB-12)) and in deep samples from three soil borings (SB-1, SB-4 and SB-11). Mercury (maximum of 0.466 mg/kg at SB-4, 0-2 ft bls) exceeded the UUSCO in shallow samples from seven soil borings (SB-1, SB-4, SB-5, SB-6, SB-10, SB-11 and SB-12) and in deep samples from three soil borings (SB-1, SB-4 and SB-11), but not the RRSCO. Zinc (maximum of 777 mg/kg at SB-11, 8-10 ft bls) exceeded the UUSCO in shallow samples from seven soil borings (SB-1, SB-4, SB-5, SB-6, SB-9, SB-10, SB-11, SB-12)) and in deep samples from three soil borings (SB-1, SB-4 and SB-11), but not the RRSCO.
- Total polychlorinated biphenyls (PCBs) (maximum 355 $\mu\text{g}/\text{kg}$ at SB-1, 0-2 ft bls [estimated value]) were detected above their respective UUSCOs in shallow samples from three (3) soil borings (SB-1, SB-4, and SB-12) and in the deep sample from one soil boring (SB-1).
- One or more pesticides including DDD (maximum of 35.1 $\mu\text{g}/\text{kg}$ at SB-12, 0-2 ft bls), DDE (maximum of 471 $\mu\text{g}/\text{kg}$ at SB-11, 8-10 ft bls) and DDT (maximum of 1,670 $\mu\text{g}/\text{kg}$ at SB-11, 8-10 ft bls) were detected above their respective UUSCOs in shallow samples from all soil borings and in deep samples from three soil borings (SB-1, SB-4 and SB-11). Cis-chlordane (maximum of 315 $\mu\text{g}/\text{kg}$ at SB-11, 8-10 ft bls) was detected above its respective UUSCO in the deep sample from one soil boring (SB-11). DDD (maximum of 35.1 $\mu\text{g}/\text{kg}$ at SB-12, 0-2 ft bls) was detected above its respective UUSCO in shallow samples from six soil borings (SB-4, SB-5, SB-6, SB-7, SB-10 and SB-12) and in deep samples from three soil borings (SB-1, SB-4, SB-11). Dieldrin was detected above its respective UUSCO in nine shallow samples (maximum of 315 $\mu\text{g}/\text{kg}$ at SB-11, 8-10 ft bls [SB-1, SB-3, SB-4, SB-5, SB-6, SB-7, SB-8, SB-9, SB-10 and SB-11]). Dieldrin was detected above its respective RRSCO in the deep sample from one soil boring (SB-11).

2.3.3 Groundwater

Following installation of soil borings, a total of five (5) soil borings were converted to temporary groundwater monitoring wells. The temporary groundwater monitoring wells were constructed of 1-inch polyvinyl chloride (PVC) well screen and riser (the well screen intersected the top of the observed water table).

Following installation, the newly installed temporary groundwater monitoring wells were gauged with an oil-water interface probe and were sampled utilizing low-flow sampling techniques. Groundwater grab samples

were filtered in the field for metals, SVOCs, pesticides, and PCBs. Following sampling, the temporary groundwater monitoring wells were removed and the boring location was backfilled with soil cuttings to grade.

Laboratory analytical results for groundwater samples were compared to the NYSDEC Ambient Water Quality Standards and Guidance Values (AWQSGVs). The results of the groundwater sampling event (exceedances only) are summarized on Plate 2. Results of the laboratory analysis are discussed below:

- One VOC, chloroform, was detected above its AWQSGV in all samples (maximum concentration of 39 micrograms per liter [$\mu\text{g/L}$]). Though the source of the chloroform exceedances cannot be confirmed, the exceedances may be attributed to any leaking plumbing related to the former on-Site structures, leaking water mains and the watering of the community gardens with potable water that was likely chlorinated.
- In general, SVOC concentrations in the filtered groundwater samples were low to non-detect and were lower in the filtered samples than in the unfiltered samples. This indicates that the SVOCs are primarily due to suspended sediments present in the groundwater samples. Concentrations of all SVOCs in the filtered samples were below their respective AWQSGVs, except Bis(2-ethylhexyl)phthalate, a very common laboratory contaminant. Bis(2-ethylhexyl)phthalate (maximum concentration of 9.4 $\mu\text{g/L}$) was detected above its AWQSGV in one filtered sample (SB-4).
- In general, metals concentrations in the filtered groundwater samples were low to non-detect and were lower than in the unfiltered samples. This indicates that the metals are primarily due to suspended sediments present in the groundwater samples. Concentrations of all metals in the filtered samples were below their respective AWQSGVs, except sodium. Sodium (maximum concentration of 68,300 $\mu\text{g/L}$) was detected above its AWQSGVs in three filtered groundwater grab samples (SB-4, SB-5, and SB-10). Sodium is naturally occurring in groundwater.
- No PCBs were detected in the groundwater.
- In general, pesticide concentrations in the filtered groundwater samples were low to non-detect and were lower in the filtered samples than in the unfiltered samples. This indicates that the pesticides are primarily due to suspended sediments present in the groundwater samples. Concentrations of all pesticides in the filtered samples were below their respective AWQSGVs, except dieldrin. Dieldrin (maximum concentration of 0.022 [estimated] $\mu\text{g/L}$) was detected above its AWQSGVs in three (3) filtered groundwater grab samples (SB-1, SB-4 and SB-10).

2.3.4 Soil Vapor

To evaluate the potential for soil vapor intrusion at the Site, seven (7) temporary soil vapor points were installed and sampled. Following utility clearance procedures, and beginning on April 30, 2018, Trinity installed the temporary soil vapor points utilizing a track mounted Geoprobe™ drill rig. In areas where the proposed building foundations are at a shallow depth, the vapor point was installed at five (5) ft bls. In areas where the proposed building foundations are deeper, the vapor point was installed at one-foot above the groundwater table. Following installation of each temporary soil vapor point, the integrity of each sampling point seal was checked in accordance with New York State Department of Health (NYSDOH) Guidance for Evaluating Soil Vapor Intrusion. This step was conducted as a quality assurance/quality control measure to verify that the soil vapor sample was not compromised by inadvertent introduction of ambient air into the sample. Soil vapor was purged from the point using an air pump calibrated to approximately 0.2 liters per minute while the sampling point was covered at the surface with a small enclosure that is partially filled with helium. The soil vapor discharging from the air pump and the air within the enclosure was continuously monitored for helium during purging. Samples were collected using batch certified vacuum canisters equipped with laboratory-supplied, two-hour regulators. Samples were analyzed for VOCs via USEPA Method TO-15. All samples were collected in accordance with the NYSDOH guidance.

Several petroleum-related VOCs and one chlorinated VOC (Tetrachloroethylene [PCE]) were detected in soil vapor samples throughout the Site during the Roux 2018 Phase II ESA. The results of the soil vapor sampling event are summarized on Plate 3.

- PCE was detected in four (4) soil vapor samples (SV-3, SV-4, SV-6 and SV-7) at concentrations ranging from 8.68 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) to 48.8 $\mu\text{g}/\text{m}^3$.

3. RI Work Plan Objectives, Scope, and Rationale

Roux, on behalf of the BCP Requestor, has developed a RI scope of work (presented in this RIWP) that is intended to satisfy NYSDEC BCP requirements based on the anticipated foundation excavation depths which vary across the Site between 2 and 12 ft bls. Data collected during the RI will determine the basis for remedial actions for the Site.

Standards, Criteria, and Guidance (SCGs) for soil at BCP Sites are the numerical SCOs presented in Part 375. The SCOs are categorized into unrestricted use criteria and restricted use (residential, restricted-residential, commercial, or industrial) criteria, as well as criteria for protection of groundwater (PGW) and ecological resources. The applicability of each category of SCOs is determined based upon the current and reasonably anticipated future use of the Site, as well as cleanup tracks being evaluated. The anticipated redevelopment for the Site includes 1) a 15-story tower which will hold community facility space, 2) a 10-story building and 3) a raised courtyard built over a community facility space, so RRSCOs are the applicable standards if a Track 2 or Track 4 restricted use remedy is contemplated and UUSCOs are the applicable standards if a Track 1 remedy is contemplated.

Although the groundwater beneath the Site is not used as a drinking water source, based upon the evaluation of the current groundwater data discussed in the RIWP, the NYSDEC AWQSGVs – TOGS 1.1.1. will be considered.

New York State Department of Health's (NYSDOH's) Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York, October 2006 and Revised 2017 (NYSDOH Guidance), employs three (3) Matrices to determine whether monitoring or mitigation of soil vapor levels are warranted, based on concentrations present in sub-slab and indoor air samples. Potential soil vapor impacts identified in accordance with the NYSDOH guidance will be considered.

3.1 Objectives

The following areas of concern (AOCs) were identified in historic documents within the Site limits:

- Soil and groundwater contamination due to the presence of Site-wide urban fill;
- Potential migration of contaminants of concern through groundwater and/or soil vapor impacts onto the Site from an adjacent property to the north/northwest which operated as a dry-cleaning facility in the past;
- Potential soil, groundwater and soil vapor contamination from former Site uses;
- Potential soil, groundwater, and soil vapor contamination from former on-Site presumable dry cleaner; and
- Potential UST identified by geophysical survey.

Based on the existing data for the Site and known data gaps, the following objectives have been identified for the RIWP:

- Delineate the nature and extent of potential impacts to soil from AOCs described above utilizing multiple sample depths (to define the cleanup track) and endpoint sampling at the bottom of planned excavation;
- Investigative potentially identified UST using soft-digging techniques;

- Evaluate soil quality associated with the former presumed dry cleaner AOC;
- Delineate the nature and extent of impacts to groundwater;
- Evaluate the soil vapor intrusion risk to future structures that will be built on-Site; and
- Fill data gaps from prior investigations.

Environmental data collected during the RI will be used to qualitatively assess the potential exposure of receptors to Site contaminants and develop the information necessary to support the development of a RAWP.

3.2 RI Scope

The scope of the RI will include the collection of sufficient Site characterization data so that, together with the historical data, the entire Site will be sufficiently characterized to support the development of the Site-wide RAWP.

To accomplish this, the scope of work for the RI will include the following:

- The performance of Site reconnaissance to confirm proposed sampling locations;
- The advancement of soil borings, collection of soil samples, installation of groundwater monitoring wells, collection of groundwater samples from new monitoring wells, installation of soil vapor points, and sampling of new soil vapor points;
- The collection of soil, groundwater, and soil vapor data sufficient to define the nature and extent of impacted media;
- The collection of a synoptic round of groundwater level measurements and the collection of additional land survey data as needed for developing a groundwater elevation contour map; and
- The performance of a qualitative exposure assessment (EA) to identify exposure pathways and evaluate contaminant fate and transport.

All investigation activity will be conducted in accordance with the applicable requirements of the NYSDEC DER-10. All soil and groundwater samples collected from the soil and groundwater investigation described in detail below will be analyzed for the TCL/Part 375 plus 30/ TAL (TCL + 30/TAL) list of parameters including:

- TCL/Part 375 VOC + 10 Tentatively identified compounds (TICs);
- TCL/Part 375 Base neutral acids (BNA)/SVOCs + 20;
- TCL/Part 375 Pesticides;
- TCL/Part 375 Herbicides;
- TCL/Part 375 PCBs;
- TAL/Part 375 Metals (including hexavalent chromium); and
- Total Cyanide.

Soil samples will also be collected for geologic logging in accordance with the Unified Soils Classification System (USCS) and for visual inspection (for evidence of contamination including staining, elevated photoionization detector (PID) detections, and/or odors).

As required by NYSDEC, groundwater samples from a set of monitoring wells representing upgradient, central, and downgradient locations on-Site and will also be analyzed for the emerging contaminants (ECs)

1,4-Dioxane and Per- and Polyfluoroalkyl Substances (PFAS), which include the 21 compounds listed in the NYSDEC July 2018 Groundwater Sampling for Emerging Contaminants Guidance (NYSDEC July 2018 Guidance).

All soil vapor air samples will be analyzed using United States Environmental Protection Agency (USEPA) Method TO-15 for VOCs.

All data will be produced in accordance with NYSDEC Analytical Services Protocol (ASP) Category B deliverables and will be reviewed and validated by an independent party in a Data Usability Summary Report (DUSR) before being incorporated into the RI Report (RIR) for the Site. All data will be submitted to NYSDEC in electronic format, in accordance with DER-10, section 1.15 and updated procedures that took effect on November 14, 2018.

The overall scope of each component of the RI is discussed in the following subsections. Detailed field sampling procedures are provided in the Quality Assurance Project Plan/Field Sampling Plan (QAPP/FSP; Appendix C). The proposed sampling locations are shown on Figure 3 of this RIWP and additional information, including intervals to be sampled and sample rationale, is provided in the sections below.

3.2.1 Site Reconnaissance

Roux has performed a preliminary Site reconnaissance and a geophysical survey and has identified potential AOCs, described in Section 3.1., which will be targeted during the RI. An inspection of the existing Site conditions will be conducted to determine final locations of soil borings and monitoring wells based on actual field conditions.

3.2.2 Soil Investigation

In the 2018 Phase II ESA, Roux collected soil data throughout the Site in a manner consistent with DER-10. We believe this data accurately characterizes soil conditions at discrete intervals at the Site and, as such, the additional soil investigation proposed as part of this RI will supplement that data. In order to incorporate the prior soil data into the RI Report, we will perform a Data Usability Summary Report (DUSR) to validate all data meets applicable data quality objectives.

To characterize the soil conditions for the AOCs at the Site and fill existing data gaps in vertical delineation of contamination, twenty-four (24) soil borings will be installed at the locations shown in Figure 3. Boreholes will be pre-cleared to five ft bls using non-intrusive methods, such as hand tools and/or vacuum excavation, prior to advancement of soil borings to verify the absence of utilities and/or other subsurface features (i.e. obstructions). Should a utility or other feature be observed during pre-clearance activities, the sampling location will be relocated to no more than ten feet away from the original proposed sample location. If a boring is proposed to be moved more than ten feet from the location shown on Figure 3, the NYSDEC project manager will be consulted prior to installing the boring at the new location. Soil samples will be collected by hand or by utilizing the GeoProbe® Direct-Push Drill Rig. Soil samples will be collected continuously from land surface to the water table or the interval below the planned excavation depth. During installation of the soil borings, the lithology will be recorded, and soil will be inspected for evidence (visual or olfactory) of contamination and field screened continuously for VOCs using a PID with a 10.6 eV lamp.

Region of Site	Number of Borings	Boring ID	Depth of Sample (ft bls)
Community Garden - SW	5	SB-13 through SB-17	2-4, 8-10, 15-17, 17-19 (H*), 19-21 (H)
Building B - South	5	SB-18 through SB-22	2-4, 4-6 (H), 6-8 (H), 15-17 (H)
Building B (unexcavated)	3	SB-23 through SB-25	2-4, 4-6 (H), 6-8 (H)
B – Courtyard	4	SB-26 through SB-28	11-13, 13-15 (H), 15-17 (H)
Potential UST	1	SB-29	0-2, 11-13, 13-15 (H), 15-17 (H)
Presumed Former On-Site Dry Cleaner	2	SB-31 and SB-32	SB-31: 0-2, 11-13, 13-15 (H), 15-17 (H) and 2 ft interval exhibiting the highest impacts SB-32: 0-2, 2 ft interval exhibiting the highest impacts
Building B – North (outside Presumed Former On-Site Dry Cleaner AOC)	7	SB-30, SB-33 through SB-36	SB-33 and SB-36: 11-13; 13-15 (H), 15-17(H), SB-30, SB-34 and SB-35: 2-4, 4-6 (H), 6-8 (H)
Community Garden - SE	3	SB-37 through SB-39	2-4, 8-10, 10-12; 12-14 (H); 15-17 (H)

* (H) – Sample to be submitted to the laboratory on hold pending the results of the initial, shallower sample(s). Only analytes that exceed at least one SCO in the shallow samples will be run in the samples held in the deeper intervals.

If odor/visual evidence of contamination or elevated PID concentrations are noted, one additional sample will be collected from the interval that exhibits the greatest evidence of contamination. Following sample collection, boreholes that will not be converted to monitoring wells will be backfilled with soil cuttings with an upper bentonite plug and restored with like materials to surrounding grade. Grossly contaminated soil cuttings will be placed into sealed and labeled Department of Transportation (DOT) approved 55-gallon drums, pending characterization and off-site disposal at a permitted facility.

3.2.2.1 Soil Investigation for Presumed Former Dry Cleaner AOC

Two focused borings (SB-31 and SB-32) will be completed in the north and southwest sides of the area where the presumed former dry cleaner was historically located. Up to two (2) soil samples will be collected from each boring to be submitted for laboratory analysis. One soil sample will be collected from the first two-foot interval of soil representing surface soils at the Site. A second sample will be collected from the two-foot interval exhibiting the greatest evidence of impact (elevated PID detections, odors, or staining). If no

evidence of impacts is observed during soil boring advancement, the soil sample will be collected from the two-foot interval below the proposed foundation excavation depth (12-14 ft bls). In the event that impacts are observed, additional soil samples may be collected from two-foot intervals located beneath the visually impacted interval to confirm clean deeper samples.

3.2.2.2 Soil Investigation for Potential UST

In the area where the potential UST was identified during the geophysical survey, two (2) exploratory test-holes will be dug to expose and verify the location, type, and size of the potential UST. The test-holes will be completed using soft digging techniques such as a vector or air knife, non-mechanical tools, or hand tools.

If the presence of the UST is confirmed, soil boring SB-29 will be completed downgradient of the UST location. Up to two (2) soil samples will be collected from the boring to be submitted for laboratory analysis. One (1) soil sample will be collected from the first two-foot interval of soil representing surface soils at the Site. A second sample will be collected from the two-foot interval exhibiting the greatest evidence of impact (elevated PID detections, odors, or staining). If no evidence of impacts is observed during soil boring advancement, the soil sample will be collected from the two-foot interval below the proposed foundation excavation depth (11-13 ft bls). In the event that impacts are observed, additional soil samples will be collected from two-foot intervals located beneath the visually impacted interval to vertically delineate the extent of the impacts.

If the UST is not found, one of the test holes will be converted to a soil boring (SB-29). One soil sample will be collected from the first two-foot interval of soil representing surface soils at the Site. A second sample will be collected from the two-foot interval exhibiting the greatest evidence of impact (elevated PID detections, odors, or staining). If no evidence of impact is observed during soil boring advancement, the soil sample will be collected from the two-foot interval below the proposed foundation excavation depth (11-13 ft bls).

3.2.2.3 Soil Investigation for Impacts at Bottom of Planned Excavation Using Pre-Excavation Endpoints

In the attempt to supplement the vertical delineation of potential contamination at the Site within the planned excavation, pre-excavation endpoint samples will be incorporated into this RI and collected from the two-foot interval below the planned excavation. The depth of the sample intervals is shown in the table in Section 3.2.2.

According to DER-10, endpoint samples (also known as documentation samples) are intended to indicate the quality of soil remaining after the completion of the remedial action. This scope intends to collect a subset of endpoint samples prior to excavation to investigate for contamination and provide insight to the cleanup requirements that may be necessary for this Site. Following completion of excavation, the remaining number of endpoint samples to be identified in the RAWP will be collected. Procedures and frequency for this testing will be specified in the RAWP.

3.2.3 Groundwater Investigation

To characterize Site groundwater flow and quality conditions and to evaluate for potential off-Site migration, five (5) permanent groundwater monitoring wells (MW-1 through MW-5) will be installed at selected soil boring locations. The proposed groundwater monitoring well locations are shown on Figure 3.

The QAPP/FSP in Appendix C contains monitoring well design details. Following installation, each proposed monitoring well to be sampled will be developed to ensure proper hydraulic connection with the aquifer and to reduce/eliminate turbidity of the groundwater. The wells will be developed using a submersible pump, which will be surged periodically until well yield is consistent and has turbidity below 50 nephelometric turbidity units (NTUs), if possible. Detailed procedures regarding well development can be found in the QAPP/FSP (Appendix C). All monitoring wells will be surveyed by a licensed New York State surveyor to obtain horizontal and vertical coordinates. The depth to groundwater in each monitoring well will be measured using an electronic water level meter and a groundwater contour map will be developed using the survey data.

Groundwater samples from the permanent monitoring wells will be collected no sooner than one (1) week following development of the wells. The wells will be purged using a submersible pump or an alternative method, depending on the observed depth to groundwater, and one round of groundwater samples will be collected in accordance with the QAPP/FSP and analyzed for:

- TCL + 30/TAL/Part 375 (including filtered and unfiltered metals, SVOCs, PCBs and pesticides)

Groundwater samples collected from three (3) of the permanent monitoring wells MW-1, MW-2, and MW-3 representing upgradient, central, and downgradient special locations, respectively, will be analyzed for the ECs 1,4-Dioxane and the 21 PFAS listed in the NYSDEC July 2018 Guidance. Field parameters (e.g., pH, dissolved oxygen, oxidation-reduction potential [ORP], etc.) will also be collected using a water quality meter during purging and prior to sampling.

3.2.4 Soil Vapor Investigation

The following soil vapor samples will be collected during the RI to evaluate soil vapor conditions at the Site:

- Three (3) soil vapor samples across the Site to further assess the impact of the urban fill (SV-9 through SV-11)
- One (1) soil vapor sample (SV-12) near the back of the presumed former on-Site dry cleaner
- One (1) additional perimeter soil vapor sample (SV-13) located along the western property boundary to evaluate the potential migration of contaminants of concern on-Site from an adjacent property to the north/northwest which operated as a dry-cleaning facility in the past

The soil vapor samples will be collected from soil vapor points installed by hand or by using a Geoprobe® to the target depth of approximately 5 to 7 ft bls, 2 ft below the anticipated bottom of the slab, or two feet above the groundwater table (whichever is shallower) as per the following table:

Region of Site	Number of Borings	Boring ID
General Site Conditions	SV-9 through SV-11	SV-9 and SV-11: 5-7 SV-10: 7-9
Presumed Former On-Site Dry Cleaner	SV-12	7-9
Perimeter to assess vapor migration onto the Site from former off-Site dry cleaners	SV-13	5-7

New Teflon®-lined tubing will be attached to an expendable soil vapor sampling point with a 6-inch stainless steel screen. The soil vapor points will be backfilled with #2 Morie sand to approximately one foot above the screen. The remainder of the borehole will be backfilled with a concrete/bentonite slurry to grade.

The soil vapor samples will be collected using pre-cleaned (batch certified) 6-liter summa canisters with regulators calibrated to collect samples over an 8-hour period and analyzed using USEPA Method TO-15 for VOCs. A helium tracer gas test will be performed on each vapor point prior to sampling in accordance with the procedures outlined in the NYSDOH Guidance. The proposed soil vapor sampling locations are shown on Figure 3. Additional details regarding soil vapor sampling methods are provided in the QAPP/FSP (Appendix C).

3.2.5 Qualitative Exposure Assessment

A qualitative human health EA will be performed following the collection of all RI data. The EA will be performed in accordance with Section 3.3(c)4 of DER-10 and the NYSDOH guidance for performing a qualitative EA (DER-10; Appendix 3B). The results of the qualitative EA will be provided in the RIR.

According to Section 3.10 of DER-10, and the Fish and Wildlife Resources Impact Analysis Decision Key in DER-10 Appendix 3C, a Fish and Wildlife exposure assessment will be performed (if needed) based on the RI results.

4. Quality Assurance/ Quality Control (QA/QC) Protocols

The goal of the QA/QC aspect of the RI is to ensure that suitable and verifiable data results from sampling and analysis are performed. To accomplish this, a QAPP/FSP has been prepared and is provided as Appendix C.

5. Health and Safety

A site-specific Health and Safety Plan (HASP) has been prepared for the Site and is provided in Appendix D. A site-specific Community Air Monitoring Plan (CAMP) has been prepared for the Site and is provided as Appendix E.

6. Reporting and Schedule

The following will be provided to the NYSDEC during the course of the RI work.

Progress Reports

Progress report submittals to be provided to the NYSDEC include the following.

- Periodic reports, no less than one per month as required by the BCA, will be submitted during RI activities.
- Discovery of any previously unknown contaminated media during RI activities will be promptly communicated to NYSDEC’s project manager.
- A Site map will be provided to identify locations discussed in progress reports provided to NYSDEC.

Remedial Investigation Report

Following the completion of the RI, a RIR will be prepared to summarize the results and findings of the RI. The RIR will likely be combined with the RAWP into a single RIR/RAWP due to project time constraints.

The RIR/RAWP will include all data developed during the RI and will meet the technical requirements of DER-10.

Remedial Investigation Schedule		
Remedial Investigation Work Plan (RIWP) Public Comment Period (concurrent with BCP Application)	December 21, 2018 through January 20, 2019	
Both Parties Execute BCA	February 19, 2019	
NYSDEC Approves RIWP/Remedial Investigation	February/March 2019	Anticipated 3 weeks to complete RI field activities.
Submit RIR/RAWP to NYSDEC and 45-day Public Comment Period	April/May 2019	
NYSDEC and NYSDOH Approval of RIR/RAWP	June 2019

EXECUTIVE SUMMARY

At the request of SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC (Users), Roux Environmental Engineering and Geology, D.P.C. (Roux), performed a Phase I Environmental Site Assessment (ESA) of the real property known as the Sendero Verde Redevelopment Project occupying Tax Lot 20 of Tax Block 1617, in the borough of Manhattan, City and State of New York (Site) (Figure 1). Until recently, the Site encompassed 26 Tax Lots (Tax Lots 20, 22, 23, 25, 28, 29, 31, 33, 35, 37, 38, 39, 40, 41, 42, 43, 45, 46, 48, 50, 51, 52, 53, 54, 121 and 122). An Application for Apportionments or Mergers was submitted to the New York City Department of Finance (NYCDOF) on November 27, 2017 requesting that the 26 aforementioned Tax Lots be merged into a single Tax Lot. The application was approved and the New York City Tax Map was updated on January 12, 2018 to reflect the change. The Phase I ESA is intended to define the historical uses of the Site and identify any potential Recognized Environmental Conditions (RECs) that could warrant further consideration, in accordance with ASTM International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process).

A review of historical sources including Certified Sanborn Fire Insurance maps, historical aerial photographs and a City Directory Abstract indicates that the Site was developed since at least 1896 with several low-rise Site buildings. From 1896 through the 1970's, the majority of the Site buildings were mixed residential and commercial in use. As indicated by the Certified Sanborn Fire Insurance maps, demolition of the Site buildings began in 1979, all Site buildings were demolished by 1986. A portion of the Site was converted to a park and playground in 2003. Currently, the Site consists of a full city block (Block 1617) minus two parcels (Lots 21 and 34). The Site is approximately 76,576 square feet in area and contains several community gardens and a baseball field. The community gardens and baseball field are no longer in use and are not accessible to the public as the Site is surrounded by locked perimeter fences. The areas surrounding the Site are urban and developed with low to high-rise multi-family residential buildings, commercial and office buildings, and mixed use residential and commercial properties.

Based on the information gathered as a result of the Phase I ESA process, Roux has identified the following RECs in connection with the Site:

- Historical on-Site Usage: As indicated by the City Directory, 56 East 112th Street operated as Continental Tailors & Cleaners (assumed to be a dry cleaner). Other noted operators/tenants of the Site included Frank Cohen Printer, White Printer Department, Hyman Furrier and Hernando Contreras Shoes. The Certified Sanborn Fire Insurance maps indicated that, a portion of the Site was identified as a "Chinese Laundry" from at least 1911 to 1979 and a portion of the Site contained paint stores from at least 1939 to 1951. These historical operations may have used hazardous materials and potentially impacted the quality of the subsurface soil, soil vapor and/or groundwater beneath the Site.
- Past use of adjacent and upgradient properties: As detailed in the environmental database report, an adjacent property to the north/northwest located within close proximity to the Site operated as a dry cleaning facility in the past. The immediately adjacent property to the south, operated as an auto service station in the past. As detailed in the City Directory, nearby properties also included dental offices and paint shops. These historical operations may have potentially impacted the quality of the subsurface soil, soil vapor and/or groundwater beneath the Site through on-Site migration of contaminants.

The following Business Environmental Risks (BERs) were identified regarding the Site:

- As noted in the geotechnical evaluation provided by the Users, the Site is underlain by historic urban fill which is common within the five boroughs of New York City. The thickness of the fill layer is estimated to be ten to 15 feet below land surface (bls).
- There is also the potential that previous on-Site buildings used fuel oil for heat prior to conversion to natural gas, though documentation is unavailable. Therefore, there is the potential that fuel oil tanks were present on-Site and undocumented removal of tanks may have occurred or

underground storage tanks (USTs) may remain onsite. There is potential that should tanks have existed, spills/releases may have impacted soil, groundwater and soil vapor beneath the Site.

Roux has identified the following data gaps in the information developed as part of the inquiry that affected the ability of the environmental professional to identify conditions indicative of releases at the Site:

- Awaiting responses to Freedom of Information Act (FOIA) requests from the New York City Department of Health (NYCDOH), New York State Department of Health (NYSDOH), New York State Department of Environmental Conservation (NYSDEC), New York City Fire Department (FDNY) and New York City Department of Environmental Protection (NYCDEP) pertaining to the Site. If any pertinent information is obtained from responses to outstanding FOIA requests regarding the Site, Roux will prepare a letter addendum summarizing these findings.

Roux was unable to conduct an interview with a knowledgeable Site representative. This is considered insignificant since the community gardens and baseball field are no longer being used and are completely fenced.

1.0 INTRODUCTION

At the request of SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC (Users), Roux Environmental Engineering and Geology, D.P.C. (Roux), performed a Phase I Environmental Site Assessment (ESA) of the real property known as Sendero Verde Redevelopment Project occupying Tax Lot 20 of Tax Block 1617, in the borough of Manhattan, City and State of New York (Site) (Figure 1). Until recently, the Site encompassed 26 Tax Lots (Tax Lots 20, 22, 23, 25, 28, 29, 31, 33, 35, 37, 38, 39, 40, 41, 42, 43, 45, 46, 48, 50, 51, 52, 53, 54, 121 and 122). An Application for Apportionments or Mergers was submitted to the New York City Department of Finance (NYCDOF) on November 27, 2017 requesting that the 26 aforementioned Tax Lots be merged into a single Tax Lot. The application was approved and the New York City Tax Map was updated on January 12, 2018 to reflect the change. The Phase I ESA is intended to define the historical uses of the Site and identify any potential Recognized Environmental Conditions (RECs) that could warrant further consideration, in accordance with ASTM International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process).

The Phase I ESA was conducted in accordance with the scope of work presented in the original contract with SV Managers LLC dated August 4, 2017 and the Amendment, Assignment and Assumption of Agreement between SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC and Roux, dated December 22, 2017, and in general accordance with the American Society of Testing and Materials' (ASTM) International Standard Practice E1527-13 (Standard Practice for Environmental Site Assessments), consistent with the USEPA Standards and Practices for All Appropriate Inquiries (AAI) Rule (40 CFR Part 312, Standards and Practices for All Appropriate Inquiries; Final Rule¹). The preamble for the AAI Rule states:

In today's final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-05 (entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process") and recognizing the E1527-05 standard as consistent with today's final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule.²

This AAI Rule was subsequently amended in 2013, as indicated in the following "Background":

With today's action, EPA is establishing that parties seeking liability relief under CERCLA's landowner liability protections, as well as recipients of brownfields grants for conducting site assessments, will be considered to have met the standards and practices for all appropriate inquiries, as set forth in the Brownfields Amendments to CERCLA and 40 CFR Part 312, if such parties follow the procedures provided in the ASTM E1527-13 "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process." EPA made this determination based upon the Agency's finding that the ASTM E1527-13 standard is compliant with the All Appropriate Inquiries Rule. Therefore, parties conducting all appropriate inquiries may use the procedures in the newly issued ASTM E1527-13 standard when conducting all appropriate inquiries.³

The purpose of the Phase I ESA was to identify, to the extent feasible, Recognized Environmental Conditions (RECs) in connection with the Site. ASTM Standard Practice E1527-13 defines RECs as:

the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

ASTM Standard Practice E1527-13 provides that identified RECs can be evaluated and classified into Controlled Recognized Environmental Conditions (CRECs) or Historical Recognized Environmental

¹ Final Rule and information available at www.epa.gov/swerosps/bf/regneg.htm#final_rule, and <https://federalregister.gov/a/2013-31112>.

² Federal Register: November 1, 2005 (Volume 70, Number 210), page 66081.

³ Federal Register: December 30, 2013 (Volume 78, Number 250).

Conditions (HRECs) based on the following definitions. ASTM Standard Practice E1527-13 defines a CREC as:

a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

ASTM Standard Practice E1527-13 defines a HREC as:

a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

In order to assess the potential for RECs associated with the Site, Roux utilized a variety of information sources to perform the Phase I ESA, including a radial information search from federal, state, and local regulatory agency databases; Freedom of Information Act (FOIA)/public records responses from federal, state, and local regulatory agencies; and readily available information from the following sources: historical aerial photographs, historical topographic maps and a City Directory Abstract. The historical research and interviews were conducted in order to develop an understanding of the following:

- Current and past uses of the Site;
- Current and past uses of hazardous substances and/or petroleum at the Site, if any;
- Waste management and disposal practices that might have potentially caused releases or threatened releases of hazardous substances and/or petroleum products at the Site;
- Current and past corrective actions and response activities undertaken to address past and ongoing releases of hazardous substances and/or petroleum products at the Site, if any;
- The existence of any engineering and/or institutional controls recorded for the Site; and
- Current and past uses of adjoining properties that could have resulted in releases or threatened releases of hazardous substances and/or petroleum products to the Site.

Mr. Joseph Duminuco and Ms. Julie Moriarity served as the Environmental Professionals who conducted this Phase I ESA. As the Environmental Professionals, Mr. Duminuco and Ms. Moriarity possess sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases (as defined in §312.1(c) on, at, in, or to a Site, sufficient to meet the objectives and performance factors in §312.20(e) and (f)). Mr. Duminuco's and Ms. Moriarity's professional profiles are provided in Appendix A.

2.0 METHODS OF INVESTIGATION

The methods of investigation used to conduct this Phase I ESA are outlined in the following sections.

2.1 General

The activities performed in conjunction with the Phase I ESA of the Site include:

- Review of federal, state, and local environmental regulatory agency databases provided by Environmental Data Resources (EDR), Inc. of Milford, Connecticut indicating locations of environmental concern within specified radii from the Site (Appendix B);
- Submission of FOIA/public records requests and inquiries to federal, state, and local regulatory agencies (Appendix C);
- Review of historical information for the Site and surrounding area;
- Reconnaissance of the Site and surrounding area; and

2.2 Review of Readily Available Information

The resources compiled and reviewed by Roux to date include the following:

- EDR Radius Map with GeoCheck, dated March 15, 2018, (EDR report) (Appendix B);
- Certified Sanborn Fire Insurance Maps dated 1896, 1911, 1939, 1951, 1968, 1969, 1979, 1980, 1982, 1986, 1989, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004 and 2005 (Appendix D);
- Historical aerial photographs dated 1924, 1941, 1951, 1954, 1961, 1966, 1975, 1984, 1991, 1995, 2006, 2008, 2009, 2010 and 2011 (Appendix E);
- United States Geological Survey (USGS) 15 Minute Topographic Maps, Harlem, New York Quadrangle dated 1897, 1898 and 1900; 7.5 Minute Topographic Maps, Central Park, New York Quadrangle dated 1947, 1956, 1966, 1979, 1997 and 2013; (Appendix F);
- A search of the City Directory Abstract conducted by EDR (Appendix G); and
- Environmental Lien Search (Appendix H).

Pursuant to ASTM E1527-13, Roux also contacted and reviewed additional environmental record sources, as noted below:

Agency	Status
United States Environmental Protection Agency (USEPA)	Response received, summarized in Section 5.2.
New York State Department of Environmental Conservation (NYSDEC)	Response pending.
New York State Department of Health (NYSDOH)	Response pending.
New York City Department of Health (NYCDOH)	Response pending.
New York City Fire Department (FDNY)	Response pending.
New York City Department of Buildings Building Information System (NYCDOB BIS)	Records accessed; summarized in Section 5.2.

Agency	Status
New York City Department of Finance Automated City Register Information System (NYCDOF ACRIS)	Records accessed; summarized in Section 5.2.

2.3 Site and Surrounding Area Reconnaissance

Pursuant to ASTM Standard Practice E1527-13, Roux conducted a reconnaissance of the Site and surrounding area on December 19, 2017 and March 16, 2018, to identify, investigate, and assess potential RECs and other potential environmental concerns. The reconnaissance included observation of the Site, including all structures and buildings (if present), and surrounding area to determine the current use and condition of the Site, indications of past uses of the Site, and current uses of adjacent properties and the surrounding area. During the Site reconnaissance, Roux placed particular emphasis on identifying the following features, if present, in accordance with ASTM E1527-13:

- Hazardous substances and petroleum products in connection with identified uses;
- Storage tanks;
- Odors;
- Pools of liquid;
- Drums;
- Hazardous substances and petroleum products containers;
- Unidentified substance containers;
- Polychlorinated biphenyls (PCBs);
- Heating and cooling systems;
- Stains or corrosion;
- Drains and sumps;
- Pits, ponds, or lagoons;
- Stained soil or pavement;
- Stressed vegetation;
- Solid waste;
- Wastewater;
- Wells; and
- Septic systems.

In addition, observation of the general topographic setting of the Site was made, and inquiry was made into the source of potable water for the Site and other utilities, as presented in Section 6. Photographs from the Site reconnaissance are presented in Appendix I.

2.4 Previous Environmental Investigations

No environmental reports were provided. A preliminary geotechnical evaluation was provided by the User and is included in Appendix J.

Geotechnical Evaluation, prepared by GeoDesign Incorporated (GeoDesign), dated March 9, 2018

A geotechnical evaluation was conducted in two phases at the Site. The Phase I boring program, which included eleven geotechnical soil borings on the baseball field, was completed in August of 2017. Three of the soil borings were converted to groundwater monitoring wells. The Phase II boring program, which included four geotechnical soil borings performed on the sidewalks surrounding the Site and two geotechnical soil borings within the community garden areas, was completed in February of 2018. Uncontrolled fill was estimated to be ten to 15 feet bls and depth to groundwater was noted at approximately 12 to 13 feet bls.

As part of the geotechnical evaluation, soil samples were collected and submitted to a laboratory for sieve analysis, Atterberg limits, strength tests and consolidation tests. GeoDesign prepared recommendations for the future Site redevelopment based on observations and laboratory results of the geotechnical investigation.

3.0 PROPERTY DESCRIPTION

Descriptions of the Site and surrounding properties are included in the following sections. The location of the Site is presented in Figure 1. The Site and surrounding properties are presented in Figure 2. Documentation related to the recent Tax Map filing is included in Appendix J.

3.1 Property Location and Description

The Site is located on the western side of Park Avenue and on the eastern side of Madison Avenue, between East 111th and East 112th Streets in the East Harlem section of Manhattan, New York.

Currently, the Site consists of a full city block (Block 1617) minus two parcels (Lot 21 and 34). The Site is approximately 76,576 square feet in area and contains several community gardens and a baseball field. The community gardens and baseball field are no longer in use and are not accessible to the public as the Site is surrounded by locked perimeter fences.

The Site and surrounding area were inspected during the Site reconnaissance. The findings of the Site reconnaissance are summarized in Section 6.0.

3.2 Current Surrounding Property Usage

The area surrounding the Site is urban and developed with low to high-rise multi-family residential buildings, commercial and office buildings, and mixed use residential and commercial properties. Table 1.1 below provides details on surrounding property usage adjacent to the Site.

North	East 112 th Street beyond which are multiple high-rise residential use buildings.
South	East 111 th Street beyond which are multiple mixed use commercial and residential high-rise buildings.
East	Park Avenue and elevated Metro North Railroad Tracks beyond which is a playground belonging to a public school.
West	Madison Avenue beyond which is a part five and part seven-story residential building.

3.3 Topographic and Hydrogeologic Setting

The grade at the Site is relatively flat and elevation of the Site is approximately 18 feet above mean sea level, as shown in the USGS 7.5 Minute Series Topographic Map – Central Park Quadrangle (Appendix F). According to the EDR report, the Site is not located in, or adjacent to, regulated wetlands. The Site is not located in the 100-year or 500-year flood zone. The nearest water body is the Harlem River, which is located approximately 0.65 miles to the east of the Site.

A formal groundwater flow direction study has not been conducted as part of this Phase I ESA. Groundwater flow direction is likely influenced by subsurface utilities, local dewatering projects, bedrock topography, subway tunnels, and other subsurface features. For purposes of investigating potential off-Site migration during this Phase I ESA, the direction of groundwater flow in the area of the Site is assumed to be southeast toward the Harlem River.

4.0 SITE HISTORY

The historical uses of the Site are discussed below.

4.1 Historical Site and Surrounding Property Usage

The historical uses of the Site and surrounding properties were researched by examining Certified Sanborn Fire Insurance Maps (Appendix D); historical aerial photographs (Appendix E); historical USGS topographic maps, (Appendix F); and a City Directory Abstract (Appendix G).

A review of historical sources including Certified Sanborn Fire Insurance maps, historical aerial photographs and a City Directory Abstract indicates that the Site was developed since at least 1896 with several low-rise Site buildings. From 1896 through the 1970's, the majority of the Site buildings were mixed residential and commercial in use. As indicated by the Certified Sanborn Fire Insurance maps, demolition of the Site buildings began in 1979, all Site buildings were demolished by 1986. A portion of the Site was converted to a park and playground in 2003. Currently, the Site consists of a full city block (Block 1617) minus two parcels (Lot 21 and 34). The Site is approximately 76,576 square feet in area and contains several community gardens and a baseball field. The community gardens and baseball field are no longer in use and are not accessible to the public as the Site is surrounded by locked perimeter fences. The areas surrounding the Site are urban and developed with low to high-rise multi-family residential buildings, commercial and office buildings, mixed use residential and commercial properties.

4.2 Certified Sanborn Fire Insurance Maps

Roux reviewed historical Certified Sanborn Fire Insurance maps for the Site (Appendix D). Table 2.1 is a summary of the Site and surrounding area from 1896 to 2005, as determined from the Certified Sanborn Fire Insurance maps.

**Table 2.1
Certified Sanborn Fire Insurance Maps**

Date	Description
1896	<p>The Site is divided into 82 parcels. The following range of addresses is shown: 55-97 East 111th Street (southern portion of the Site; west to east); 1540-1548 Park Avenue (easternmost portion of the Site; south to north); 1673-1693 Madison Avenue (westernmost portion of the Site; south to north) and 38-74 East 112th Street (northern portion of Site; west to east). 1679 Madison Avenue and 91 East 111th Street are not considered part of the Site. The perimeter of the Site is depicted as developed with multiple three and five-story buildings; four of the buildings are described as residential.</p> <p>The adjacent properties to the north, beyond East 112th Street, are depicted as developed with multiple two, four and five-story buildings; their use is not described.</p> <p>The adjacent properties to the west, beyond Madison Avenue are depicted as developed with multiple four and five-story buildings; their use is not described.</p> <p>The adjacent properties to the east, beyond Park Avenue, are depicted as developed with multiple two and three-story buildings; one two-story building is described as commercial, the remaining building uses are not described.</p> <p>The adjacent properties to the south, beyond East 111th Street, are depicted as developed with multiple three and five-story buildings; their use is not described.</p>
1911	<p>The Site buildings located along Madison Avenue are described as stores with residences; the building located at 1677 Madison Avenue is described as "Paints". The Site buildings located along East 112th Street are described as stores with residences with the exception of three buildings, which are described as residential dwellings. The Site buildings located along East 111th Street are described as stores with residences; the building located at 63-67 East 111th Street is described as "Chinese Laundry". The Site buildings located along Park Avenue are depicted as stores with residences; the building located at 1540-1542 Park Avenue is described as "Drugs".</p> <p>The adjacent properties located to the north, beyond East 112th Street, are depicted as one, five and six-story buildings; their uses are described as stores with residences.</p> <p>The adjacent properties to the west, beyond Madison Avenue, appear similar to the previous map and are described as stores with residences.</p> <p>The adjacent properties to the east, beyond Park Avenue, appear similar to the previous map and are described as stores and residential dwellings.</p> <p>The adjacent properties to the south, beyond East 111th Street, are depicted as three, five and six-story buildings; their uses are described as stores and residential dwellings.</p>
1939	<p>The Site appears similar to the previous map; the buildings located at 1675 and 1677 Madison Avenue are described as "Paints". The Site building located at 91-93 East 111th Street is described as "Push Cart Storage".</p> <p>The adjacent properties located to the north, beyond East 112th Street, appear similar to the previous map. 47 East 112th Street is described as "Boarded Up" and 51 East 112th Street is described as "Garage".</p>

**Table 2.1
Certified Sanborn Fire Insurance Maps**

Date	Description
	<p>The adjacent properties to the west, beyond Madison Avenue, appear similar to the previous map.</p> <p>The adjacent properties to the east, beyond Park Avenue, appear similar to the previous map.</p> <p>The adjacent properties to the south, beyond East 111th Street, appear similar to the previous map.</p>
1951	<p>The Site appears similar to the previous map; the building located at 1675 Madison Avenue is described as “Paints”. The Site building located at 91-93 East 111th Street is vacant.</p> <p>The adjacent properties located to the north, beyond East 112th Street, appear similar to the previous map. 51 East 112th Street is described as “Church”.</p> <p>The adjacent properties to the west, beyond Madison Avenue, appear similar to the previous map.</p> <p>The adjacent properties to the east, beyond Park Avenue, appear similar to the previous map.</p> <p>The majority of the adjacent properties to the south, beyond East 111th Street, appear similar to the previous map; three properties are depicted as vacant and the easternmost building is described as “Hotel”.</p>
1968	<p>The Site appears similar to the 1951 map with the exception of the 1675 Madison Avenue no longer described as “Paints”.</p> <p>The adjoining properties to the north, beyond East 112th Street, which previously consisted of several parcels containing five-story dwellings, are depicted as redeveloped as the New York City Housing Authority Senator Robert A. Taft Houses Apartments. There are multiple high-rise buildings; the northwestern most building depicts a laundry in the basement. Parking is depicted throughout the housing complex.</p> <p>The adjacent properties to the west, beyond Madison Avenue, appear similar to the previous map.</p> <p>The adjacent properties to the east, beyond Park Avenue, are depicted as vacant.</p> <p>The adjacent properties to the south, beyond East 111th Street, appear similar to the previous map with the exception of a parking lot depicted in the central portion of the southern properties.</p>
1969	<p>The Site appears similar to the previous map. The adjacent properties appear similar to the previous map.</p>
1979	<p>The buildings located in the northeastern portion of the Site appear to have been demolished and are vacant, two of the buildings located in the southeastern portion of the Site appear to have been demolished and are vacant.</p> <p>The adjacent properties to the north, beyond East 112th Street, appear similar to the previous map.</p> <p>The adjacent properties to the west, beyond Madison Avenue, appear to have been demolished and are vacant.</p>

**Table 2.1
Certified Sanborn Fire Insurance Maps**

Date	Description
	<p>The adjacent properties to the east, beyond Park Avenue, appear similar to the previous map.</p> <p>The adjacent properties to the south, beyond East 111th Street, appear similar to the previous map.</p>
1980	<p>The majority of the Site buildings have been demolished and appear vacant, with the exception of the buildings located in the westernmost portion and central southern portion of the Site, which appears similar to the previous map. The adjacent properties appear similar to the previous map.</p>
1982	<p>The majority of the Site buildings appear demolished and vacant with the exception of the buildings located in the westernmost portion of the Site.</p> <p>The adjacent properties to the north, beyond East 112th Street, appear similar to the previous map.</p> <p>The adjacent property to the west, beyond Madison Avenue, appears redeveloped with an irregularly shaped part five, part seven-story building and is described as “Los Tres Unidos”, a residential apartment building containing 135 residential units.</p> <p>The adjacent properties to the east, beyond Park Avenue, appear similar to the previous map.</p> <p>The adjacent properties to the south, beyond East 111th Street, appear similar to the previous map.</p>
1986	<p>All of the Site buildings have been demolished and the Site appears vacant.</p> <p>The adjacent properties to the north, beyond East 112th Street, appear similar to the previous map.</p> <p>The adjacent property to the west, beyond Madison Avenue, appears similar to the previous map.</p> <p>The adjacent properties to the east, beyond Park Avenue, appear similar to the previous map.</p> <p>The adjacent properties to the south, beyond East 111th Street, appear similar to the previous map; two buildings located in the central portion have been demolished and appear vacant.</p>
1989	<p>Due to poor resolution, the Site and adjacent properties are not discernible.</p>
1991	<p>The Site appears similar to the 1986 map. The adjacent properties appear similar to the 1986 map.</p>
1992 through 1995	<p>The Site appears similar to the 1991 map.</p> <p>The adjacent properties to the north, beyond East 112th Street, appear similar to the 1991 map.</p> <p>The adjacent property to the west, beyond Madison Avenue, appears similar to the 1991 map.</p> <p>The adjacent properties to the east, beyond Park Avenue, are described as “Playground”.</p> <p>The adjacent properties to the south, beyond East 111th Street, appear similar to the 1991 map.</p>

Table 2.1 Certified Sanborn Fire Insurance Maps	
Date	Description
1996 through 2002	The Site appears similar to the 1995 map. The adjacent properties appear similar to the 1995 map.
2003	The Site appears similar to the previous map with the exception of the majority of the northern portion of the Site described as "Park and Playground". The adjacent properties to the north, beyond East 112 th Street, appear similar to the 2002 map. The adjacent property to the west, beyond Madison Avenue, appears similar to the 2002 map. The adjacent property to the east, beyond Park Avenue, appears similar to the 2002 map. The adjacent properties to the south, beyond East 111 th Street, appear similar to the 2002 map.
2004 and 2005	The Site appears similar to the 2003 map. The adjacent properties appear similar to the previous map.

4.3 Historical Aerial Photographs

Historical aerial photography may indicate past activities at a property that may not have been documented by other means, or observed during a reconnaissance visit. Aerial photographs, for the years ranging from 1924 to 2011, are presented in Appendix E.

According to a review of the historical aerial photographs, the Site appears to be developed since at least 1924 with several Site buildings and corroborates the development as shown in the Certified Sanborn Fire Insurance maps. Demolition of several Site buildings is first shown in the 1975 aerial photograph. The 1984 aerial photograph shows further demolition of Site buildings. The 1991 aerial photograph shows all Site buildings demolished. The general site layout and building structures appear generally consistent with the current Site configuration since 1991.

4.4 Historical Topographic Maps

Historical topographic maps of the Site were obtained from EDR, and they are provided in Appendix F. The topographic maps corroborate the reported general development timeline of the Site and surrounding area, as shown in the historical aerial photographs and the Certified Sanborn Fire Insurance maps. These maps did not indicate any environmentally significant topographical features such as wetlands or environmentally significant Site uses such as landfills on or adjacent to the Site, nor did they indicate radical elevation changes consistent with filling operations.

4.5 City Directory Abstract

A City Directory Abstract of the Site was obtained from EDR and is presented in Appendix G. Records reviewed for the time period 1920 to 2014 were sourced from the R.L. Polk & Company, New York Telephone, Manhattan and Bronx Directory Publishing Company Residential Directory, NYNEX Telephone, Cole Information Services and Hill-Donnelly Information Services. Noted operators/tenants of the Site included JContinental Tailors & Cleaners, Frank Cohen Printer, White Printer Department, Hyman Furrier, and Hernando Contreras Shoes.

The City Directory Abstract also includes listings for the surrounding properties. Nearby off-Site properties included tailors, dry goods stores, painters, restaurants, a hotel, meat markets, stationaries, dress shops, dental offices, botanical gardens, jewelers and several residential dwellings.

4.6 Environmental Lien Search and Activity Use Limitations

EDR performed an environmental lien search and search for recorded activity use limitations (AULs) at the Site. No recorded environmental liens or AULs were found. Documentation concerning this request is included in Appendix H.

5.0 RECORDS REVIEW

This section summarizes the information regarding the Site and adjacent or nearby properties that is contained in the standard and additional environmental record sources reviewed by Roux in accordance with ASTM Standard Practice E1527-13.

5.1 Environmental Database Review

Roux used a computerized environmental database and radius map report prepared by EDR to conduct a government records database search of properties of potential environmental concern within a maximum of one-mile radius of the Site (Block 1617, Between Park and Madison Avenues). A total of 106 environmental databases were reviewed as part of this Phase I ESA. Appendix B contains a complete copy of the EDR Radius Map Report with GeoCheck. A summary of the pertinent results is provided in Table 3.1. Table 3.1 tabulates all of the search results with at least one environmental database entry.

Table 3.1 Environmental Database Listings						
Database	Site	<1/8 mile	1/8-1/4 mile	1/4-1/2 mile	1/2-1 mile	Total
RCRA-LQG	0	10	0	NR	NR	10
RCRA-SQG	0	2	4	NR	NR	6
RCRA-CESQ	0	6	6	NR	NR	12
NY LTANKS	0	5	16	41	NR	62
NY UST	0	2	12	NR	NR	14
NY AST	0	13	27	NR	NR	40
NY TANKS	0	2	0	NR	NR	2
NY SPILLS	0	28	NR	NR	NR	28
RCRA NonGen	0	62	107	NR	NR	169
NY DRYCLEANERS	0	3	3	NR	NR	6
NY E DESIGNATION	0	5	NR	NR	NR	5
NY MANIFEST	0	84	144	NR	NR	228
NJ MANIFEST	0	26	50	NR	NR	76
EDR MGP	0	0	0	1	3	4
EDR Historical Auto	0	3	NR	NR	NR	3
EDR Historical Cleaner	0	5	NR	NR	NR	5
NR – not reported						

The Site was not identified in any of the searched environmental databases, which appears to be inconsistent with the City Directory, which indicates Continental Cleaners and Tailors (presumably a dry cleaner) was present at 56 East 111th Street.

Off-Site properties that meet the criteria presented below are discussed in this report:

- Facilities located immediately adjacent to the Site are examined due to their close proximity to the Site and the potential for surface water discharges (e.g., stormwater runoff, surface water effluent discharges) to enter the Site or through the migration of groundwater or soil vapor.
- Facilities located topographically or hydraulically upgradient to the Site.

Groundwater flow direction is assumed to be southeast toward the Harlem River. Facilities that are located downgradient or cross gradient to the Site—but not immediately adjacent to the Site—are not discussed in this report because these facilities are considered to pose a low potential environmental concern to the Site. Several properties in the surrounding area were identified on the hazardous waste generator, manifest and spills databases in the EDR report. These listings pertain to utility vaults in the street or on the sidewalk immediately adjacent to the Site. However, due to the containment within the vault or *de minimis* nature of the spill incidents prohibiting groundwater contamination, these properties are not considered to be an environmental concern in relation to the Site.

The following property is not considered to be a REC in relation to the Site, but is discussed since it is located adjacent to or in very close proximity to the Site and was identified in one of the searched databases:

- The property identified as Lot 50, Tax Block 1616, located at 1665 Madison Avenue (immediately adjacent, hydraulically downgradient to the south/southwest; is listed on the following databases:
 - E-Designation database: According to information contained within the EDR report, the property has been identified as an E-Designation (E-206) for Air Quality and Window Wall Attenuation & Alternate Ventilation protocol. In order to address the E-Designation, site investigation guidelines provided by the New York City Office of Environmental Remediation (NYCOER), the governing agency overseeing New York City's E-Designation program, are required.

The following properties are considered to be RECs in relation to the Site, since they are located adjacent to or in very close proximity to the Site and were identified in one or more of the searched databases:

- The property identified as Madison Cleaners, Inc., located 1716 Madison Avenue (0.07 miles from the Site; hydraulically crossgradient to the north) is listed on the following database:
 - EDR Historical Cleaners database: The property was listed as operating as a drycleaner from 1991 through 2014.
- The property identified as Woojin Eastmore Cleaners, located 1325 5th Avenue (0.09 miles from the Site; hydraulically upgradient to the west northwest) is listed on the following database:
 - EDR Historical Cleaners database: The property was listed as operating as a drycleaner from 2011 through 2014.
- The property identified as 84 E 76, located at 84 East 111th Street (0.01 miles from the Site; immediately hydraulically downgradient to the south) is listed on the following database:
 - EDR Historical Auto database: The property was listed as operating as an auto service station from 2002 through 2005.
- The property identified as Eastmore Cleaners, located at 1330 5th Avenue (0.1 miles from the Site; upgradient to the west northwest) is listed on the following database:
 - EDR Historical Cleaners database: EDR Historical Cleaners database: The property was listed as potentially operating as a drycleaner from 2007 through 2013.

5.2 Freedom of Information Act Letter Responses

FOIA letters were submitted to the USEPA, NYCDEP, FDNY and NYCDOH in March 2018. A response has been received from USEPA. If any additional pertinent environmental information is received from the outstanding FOIA requests following the issuance of this report, Roux will provide a letter addendum to this report detailing this information. Information obtained from the Internet Databases and FOIA responses is included as Appendix C.

NYCDEP

Response pending.

USEPA

Response received, no records were available.

NYSDEC

Response pending.

NYSDOH

Response pending.

FDNY

Response pending.

NYCDOH

Response pending.

NYCDOF ACRIS

The NYCDOF ACRIS reportedly lists federal liens for a property, if any exist; no federal liens were listed for the Site. Several deeds related to the Site were reviewed; according to the most recent deeds, the current Site owner is New York City Housing Preservation and Development. No additional pertinent environmental information was found during the NYCDOF ACRIS database review.

NYCDOB BIS

According to the review of the NYCDOB BIS, several Certificates of Occupancy (C/Os) were available for review and are summarized as follows:

Date	Use
05/17/1922	Cellar: Stores 1 st Floor: Stores 2 nd through 5 th Floors: Tenements Tax Block: 1617, Tax Lot: 37 1546 Park Avenue
01/05/1917	1 st Floor, Front: Stores 1 st Floor, Rear: Tenement 2 nd through 5 th Floors: Tenements Tax Block: 1617, Tax Lot: 40 70 East 112 th Street

Date	Use
01/05/1917	1 st Floor, Front: Stores 1 st Floor, Rear: Tenement 2 nd through 5 th Floors: Tenements Tax Block: 1617, Tax Lot: 39 72 East 112 th Street
06/15/1962	Cellar: Boiler room and storage 1 st Floor: Store 2 nd through 4 th Floors: Two apartments per floor Tax Block: 1617, Tax Lot: 121 1677 Madison Avenue
08/18/1928	Cellar: Storage 1 st Floor: Store 2 nd Floor: Store 3 rd through 4 th Floors: Tenements Tax Block: 1617, Tax Lot: 122 1675 Madison Avenue

The NYCDOB BIS also contained information on past actions (e.g., permits and violations) executed at the Site. Violations related to boilers and unsafe building conditions were noted. No open violations are noted. Several permit applications were filed with the NYCDOB. The permit applications are related to new building construction, existing building demolition, alterations to existing buildings, oil burners, electrical sign installation and plumbing work.

6.0 SITE RECONNAISSANCE

Due to access issues, the Site reconnaissance could not be completed in a single visit. The findings of the most recent Site reconnaissance, conducted on March 16, 2018, is discussed below.

6.1 Utilities

No utilities servicing the Site were observed at the time of the Site reconnaissance.

6.2 Hazardous Substances

No hazardous substances were observed during the Site reconnaissance. Several five-gallon cans of paint and deicing products were observed in the sheds previously used by the gardeners. Several signs indicating that rat poison is applied were posted on the perimeter fence.

6.3 Storage Tanks

No tanks were observed during the Site reconnaissance. Several drums were noted in the areas that contained the community gardens, the drums were either empty or contained rainwater. In addition, three composting bins were observed, they contained grass clippings, leaf cuttings and hay.

6.4 Polychlorinated Biphenyls

No transformers were observed during the Site reconnaissance.

6.5 Staining and Stressed Vegetation

No staining or stressed vegetation was noted during the Site reconnaissance.

6.6 Drains and Sumps

No drains or sumps were observed during the Site reconnaissance.

6.7 Solid Waste

Solid waste is not currently generated at the Site. Waste generation and disposal practices for the community gardens is not known, although some trash, piles of unused building materials, and what appeared to be trash cans were observed during the Site reconnaissance.

6.8 Wastewater and Stormwater

Sanitary wastewater is not generated at Site. Stormwater run-off at the Site moves via sheet flow off-Site.

6.9 Wells

One groundwater monitoring well, installed by others during the geotechnical investigation, was observed at the Site. Two additional groundwater monitoring wells were also installed by others during the geotechnical investigation; however, they were not observed at the time of the Site reconnaissance.

7.0 INTERVIEWS AND USER PROVIDED INFORMATION

Roux incorporated interviews and a completed questionnaire provided by the User to complete this Phase I ESA. Information obtained from these sources was detailed throughout this report in various sections, as appropriate. Pertinent findings from these sources are summarized in the following sections.

7.1 Interviews

Roux was unable to conduct an interview with a Key Site Representative.

7.2 User Questionnaire

Roux provided a questionnaire to Ms. Sabrina Barker (User) of SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC on March 31, 2017, regarding information for the Site. Roux has received the completed questionnaire. Based on the information provided in the questionnaire, Roux did not identify Recognized Environmental Conditions at the Site. The completed questionnaire is provided in Appendix J.

8.0 Summary of FINDINGS

Based on the information gathered as a result of the Phase I ESA process, Roux has identified the following RECs in connection with the Site:

- Historical on-Site Usage: As indicated by the Certified Sanborn Fire Insurance maps, a portion of the Site was identified as a “Chinese Laundry” from at least 1911 to 1979 and a portion of the Site contained paint stores from at least 1939 to 1951. In addition, as indicated by the City Directory, the Site formerly contained printers and dental offices which may indicate the use of hazardous materials. These historical operations may have potentially impacted the quality of the subsurface soil, soil vapor and/or groundwater beneath the Site. Noted operators/tenants of the Site included Jack Falit Real Estate and Insurance, Sanchez Luncheonette, Democratic Council for the Eighteenth Congressional District, Lopez Tropical Products, Continental Tailors & Cleaners, Frank Cohen Printer, White Printer Department, Hyman Furrier, Globe Confectionary Supply Company, Park Avenue Banana Company and Hernando Contreras Shoes.
- Past use of adjacent and upgradient properties: As detailed in the environmental database report, an adjacent property to the north/northwest located within close proximity to the Site operated as a dry cleaning facility in the past. The immediately adjacent property to the south, operated as an auto service station in the past. As detailed in the City Directory, nearby properties also included dental offices and paint shops. These historical operations may have potentially impacted the quality of the subsurface soil, soil vapor and/or groundwater beneath the Site through on-Site migration of contaminants.

The following Business Environmental Risks (BERs) were identified regarding the Site:

- There is potential that the Site is underlain by historic urban fill which is common within the five boroughs of New York City.
- There is also the potential that previous on-Site buildings used fuel oil for heat prior to conversion to natural gas, though documentation is unavailable. Therefore, there is the potential that fuel oil tanks were present on-Site and undocumented removal of tanks may have occurred or underground storage tanks (USTs) may remain onsite. There is potential that should tanks have existed, spills/releases may have impacted soil, groundwater and soil vapor beneath the Site.

Roux has identified the following insignificant data gaps in the information developed as part of the inquiry that affected the ability of the environmental professional to identify conditions indicative of releases at the Site:

- Awaiting responses FOIA requests from the NYCDOH, NYSDEC, NYSDOH, FDNY and NYCDEP pertaining to the Site. If any pertinent information is obtained from responses to outstanding FOIA requests regarding the Site, Roux will prepare a letter addendum summarizing these findings.
- Roux was unable to conduct an interview with a knowledgeable Site representative. This is considered insignificant since the community gardens and baseball field are no longer being used and are completely fenced.

9.0 REPORT ASSUMPTIONS AND LIMITATIONS

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux' initial investigation to identify the potential presence of RECs involving or affecting the Site in accordance with ASTM Standard Practice E1527-13. This Phase I ESA was conducted by Roux in accordance with the regulatory requirements for conducting AAI as set forth in the USEPA AAI Rule, at 40 CFR Part 312. Specifically, the preamble to the AAI Rule states:

*"In today's final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-13 (entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process") and recognizing the E1527-13 standard as consistent with today's final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-13 standard to comply with today's final rule."*⁴

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter "Prospective Purchaser") defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), is that person must conduct all appropriate inquiry in conformance with the AAI Rule (or the ASTM E1527-13) prior to acquisition of the property. SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC understands that, under the AAI Rule, Roux' performance of the Phase I ESA in accordance with ASTM E1527-13 will not alone result in SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC satisfying all requirements of the AAI Rule and provide a defense to CERCLA liability.

SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC understands that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. **ACCORDINGLY, ROUX MAKES NO GUARANTEES OR WARRANTIES, EXPRESSED OR IMPLIED, REGARDING THIS PHASE I ESA, INCLUDING WITHOUT LIMITATION, ANY WARRANTY THAT THIS PHASE I ESA WILL IN FACT QUALIFY THE CLIENT FOR A DEFENSE TO CERCLA LIABILITY.**

Roux has performed this Phase I ESA in a professional manner using the degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux.

The AAI Rule requires, and the conclusions and recommendations stated herein, represent the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Site. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC understands that Roux will not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the Phase I ESA was performed. To the extent practicable, Roux has identified data gaps and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of the Phase I ESA. Implementation of the recommendations may not fully address the data gaps as the information obtained from execution of those recommendations may alter or modify the interpretation of the site conditions and conclusions regarding the data gaps.

It should be noted that Roux has not conducted any intrusive activities on the Site and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux does

⁴ Federal Register: November 1, 2005 (Volume 70, Number 210) Page 66081.

not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. The Phase I ESA was conducted with a reasonable degree of inquiry to identify significant RECs, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying RECs.

This Phase I ESA Report is not an appraisal or value judgment of the Site. SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC understands that Roux shall not be liable for any use of the Phase I ESA Report as an appraisal or value judgment of the Site.

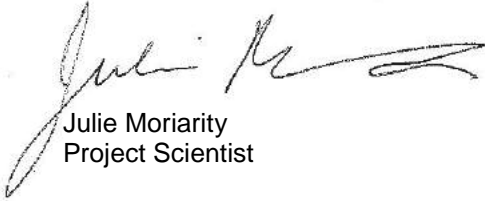

The Phase I ESA Report has been prepared for the exclusive SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC for specific application to the Site covered by the Phase I ESA Report. SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC understands that any third-party use of this Phase I ESA Report is the sole responsibility and at the sole liability of SV-A Owners LLC, SV-B Owners LLC and SV-C Owners LLC.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312; and

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth on 40 CFR 312.

Respectfully submitted,

ROUX ENVIRONMENTAL ENGINEERING AND GEOLOGY, D.P.C.

Professional Profiles

Julie A. Moriarity

Project Scientist

Technical Specialties:

Design, implementation and management of remedial investigations and Phase I and Phase II Environmental Site Assessments, New York State Brownfields Cleanup Program, New York City Office of Environmental Remediation Voluntary Cleanup Program. Field Management for large-scale soil excavation projects, including site assessment, remediation implementation and construction activities.

Experience Summary:

Six years' experience including Project Scientist and Staff Scientist at Roux Associates, Project Scientist at Enviroscience Consultants, Project Manager and Estimator for Water Treatment at Philip Ross Industries.

Credentials:

Binghamton University, State University of New York, Bachelor of Science, Environmental Sciences, December 2009

OSHA 40-hour HAZWOPER Training

LIRR Track Safety Training

AMTRAK Contractor Safety and Security Training

Key Projects

- LA Central – Project Manager for the redevelopment of a 4.1 acre site located in the Bronx. Redevelopment plans include a multi-phase, mixed-use affordable housing development offering 992 apartments. Roux Associates completed a Phase I and Remedial Investigation at the site which identified historic fill and chlorinates in groundwater. A restrictive declaration had been previously assigned to the site and the client initially opted to go through NYCOER's Voluntary Cleanup Program to address the RD, and we started that process by submitting a Phase II WP to NYCOER. However; changes were made to the New York State Brownfield Cleanup Program that made the BCP an attractive option for this site and, therefore, we have changed course and are now enrolled in the NYS BCP.
- Bernstein Real Estate: Project Manager for an E-Designation and Spills site located in Midtown Manhattan, which included the completion of Phase I and Phase II investigations and LNAPL delineation. The Site is enrolled in the NYCOER VCP and all investigation and remedial activities were completed in accordance with NYCOER and NYSDEC Spill Program guidelines.
- Project Manager for an E-Designation site located in the West Village of Manhattan, which included the completion of a Phase I and Remedial Investigation. The proposed remedy will include excavation and installation of a vapor barrier prior to the redevelopment of the Site. The Site is enrolled in the NYCOER VCP and all investigation and remedial activities were completed in accordance with NYCOER VCP guidelines.
- Project Manager for a Phase I and Phase II Environmental Site Assessment. Project included a Phase II site investigation that included sampling to delineate and identify the source of a PCE plume beneath the Site.
- Syosset Park – Field Manager for supplemental soil sampling investigation at a large and complex NYS BCP Site located in Nassau County. The Site has an extensive environmental history, including former use as a wire and conduit manufacturer (former NYS Inactive Hazardous Waste Site), former landfill (currently a Federal Superfund site), and town DPW facility.
- Performed numerous Phase I Environmental Site Assessments for due diligence in connection with property transfers for the Metro New York Area. A majority of properties included commercial properties, former retail gasoline stations, and office buildings.
- Staff Scientist/Field Manager for underground storage tank (UST) discovery, inventory, and removal. Field responsibilities involved subcontractor oversight for excavation and removal of UST, tank cleaning and waste management.
- Staff Scientist responsible for implementation of CAMP and SWPPP. Intrusive activities included soil and sediment excavation and trucking. In addition to CAMP activities, assisted project manager and construction manager with contractor oversight, material review, health and safety oversight, and daily reporting.

**Julie A. Moriarity
Project Scientist**

- Staff Scientist responsible for Phase II Site Assessment and preparation of investigation reports for soil boring installation, monitoring well installation and corresponding soil, soil vapor and groundwater sampling.
- Staff Scientist responsible for bi-annual soil vapor monitoring program for a former petroleum refinery and terminal in Brooklyn, New York. Field work included the sampling and screening of over 100 permanent soil vapor monitoring points for soil vapor intrusion monitoring.
- Field Manager for the completion of quarterly groundwater investigations for a former asphalt facility in Medford, New York.
- Experience in municipal projects which entailed major scheduling, purchasing, on-site work coordination, RFIs, change orders, knowledge of the construction process, and the equipment used in the water treatment industry. Projects include Bethpage Water District – Construction of New Pump Station; Hicksville Water District – Wellhead Treatment for VOC Removal; Roslyn Water District – VOC Treatment; Garden City Park – VOC Treatment

Joseph D. Duminuco, P.G. Executive Vice President / Principal Hydrogeologist

Technical Specialties

Providing environmental consulting services and strategic planning to the real estate industry focused on Brownfield Redevelopment projects. Investigation and remediation of soil, groundwater, and soil vapor at commercial and industrial sites, focusing on the use of innovative solutions.

Experience Summary

Thirty-one years of experience: Executive Vice President, Vice President, Practice Area Leader, Office Manager, Principal, Senior and Project Hydrogeologist at Roux Associates; Staff Hydrogeologist at Geraghty & Miller; and Geologist at Mueser Rutledge Consulting Engineers.

Credentials

M.S. in Geology, Wright State University, 1990
B.S. in Geology, Hofstra University, 1983
Licensed Professional Geologist, NY (License No. 000119)

Key Projects

- Principal-in-Charge of a NYSDEC BCP redevelopment of a property adjacent to a dry cleaning solvent distribution facility in Brooklyn, New York. The site was a former freight railyard, and offloading spillage on site and migration from the off-site solvent facility resulted in significant soil, groundwater, and vapor contamination with chlorinated VOCs. The site was developed into multifamily units with first floor retail use and the remedy consisted of soil hot spot removal, a physical barrier to limit on site migration, a permeable reactive wall to eliminate off site migration, hot-spot *in situ* injections, and a sub-slab depressurization system.
- Principal-in-charge of a NYSDEC BCP redevelopment project that also required a RCRA compliant facility closure. The site is a former paint factory located in Queens, New York. Historical site operations adversely impacted the subsurface including a LNAPL plume in addition to petroleum hydrocarbon impacts to the soil and groundwater. Roux Associates completed a RI at the site which characterized the nature and extent of the impacts. The remedial action included a large excavation that required SOE and was completed under a tent due to odor concerns, multiple ISCO injections, UST removal/abandonment, installation of a LNAPL recovery system, and installation of an SSDS. Additionally, Roux Associates provided oversight of RCRA closure activities at the site which included emptying, cleaning, and scrapping 65 ASTs/vessels, decontaminating the ceilings, walls and floors of the Paint Factory Building and collection of compliance samples.
- Principal-in-Charge for the NYSDEC BCP redevelopment of a multi-parcel site located in the Bronx, New York. Redevelopment plans include a multi-phase, mixed-use affordable housing development offering 992 apartments. Other agencies involved include NYCDEP, NYCHPD, MTA and NYCOER. The site is primarily contaminated by historic fill and the primary remedy will be a site cover system.

- Principal-in-charge of a NYSDEC VCP redevelopment of a former MGP site into a Big Box retail site in Brooklyn, New York. Project consisted of negotiations with NYSDEC and Roux limited remediation to former gasholders filled with coal tar, soil hot spots with mobile coal tar and perimeter containment of coal tar. All the remaining soil at the site was impacted with MGP waste and most of the site was underlain by liquid coal tar. Roux negotiated use of institutional/engineering controls to allow significant contamination to remain in place. A sub-slab depressurization system and vapor barrier was installed to address the mobile coal tar left below the retail building.
- Principal-in-Charge for a NYSDEC BCP redevelopment project at a site in White Plains, New York, which consists of 16 separate parcels spanning 4.5 acres and had a variety of former uses including automotive service/repair and multiple dry cleaners. The site has both chlorinated and petroleum hydrocarbon impacts to the soil and groundwater. The remedy will consist of a site cover system, soil hot spot removals, *in situ* chemical oxidation for groundwater contamination and installation of a sub-slab depressurization system.
- Principal-in-Charge for ongoing large and complex mixed-use redevelopment of a 92-acre Site located in Long Island, New York. The site was accepted into the NYSDEC BCP. The Site has an extensive environmental history, including former use as a wire and conduit manufacturer (former NYS Inactive Hazardous Waste Site), former landfill (currently a Federal Superfund site), and town DPW facility. Activities completed including compiling, reviewing, extracting, and summarizing numerous historical environmental reports prepared for the site, interacting with NYSDEC, USEPA, NCDOH, completing a supplemental soil investigation (including extensive use of XRF Technology as metals are the compound of concern) and a groundwater investigation (water is over 100 feet deep). The remedy will consist of hot spot removals, a site cover system and a sub-slab depressurization system.
- Principal-in-Charge for a NYSDEC BCP redevelopment in Staten Island, New York of a former retail service station site. There is soil, groundwater, and vapor contamination from petroleum-related constituents in the vicinity of the former gasoline piping and pump island (the petroleum source area), as well as historic fill across the entire site. The remedy, described in the Remedial Action Work Plan prepared by Roux, will consist of a sheet pile containment wall around the petroleum source area, a Site Cover System across the entire site, comprised of concrete building slab/walkways, asphalt parking areas and limited landscaped areas and site-wide a sub-slab depressurization system to prevent vapor intrusion into the proposed retail building and offsite migration of impacted soil vapor
- Principal-in-Charge of a mixed-use (public school and residential) Brownfield redevelopment in lower Manhattan, New York. Project consisted of a Phase I and a Phase II ESA to satisfy NYCDEP requirements. Due to the presence of contaminated historic fill Roux performed *in situ* waste characterization to assist in the development of NYCDEP-required plans. In addition, Roux provided oversight of the waste removal, completion of waste manifests, and full-time CAMP during all soil moving activities. Roux provided support to excavation contractor when two previously unknown USTs were discovered during excavation activities.

Joseph D. Duminuco, P.G. Executive Vice President / Principal Hydrogeologist

- Principal-in-Charge of a multi-phased NYSDEC VCP redevelopment of a former Defense Site to water front, upscale housing in Long Island, New York. This investigation included determining the nature and extent of chlorinated VOCs in soil, groundwater, and vapor- phase contamination onsite and offsite. Utilized a risk assessment to argue the level of residual contamination allowed to remain onsite with an intended residential future use. Remedial alternatives were selected in accordance with future development plans and institutional/engineering controls were proposed to limit cleanup costs. Successfully argued the technical impracticability of remediation of the heavily contaminated deeper aquifer beneath the site and offsite.
- Principal-in-Charge of a retail/commercial redevelopment in the Bronx, New York. The site contained a NYCDEP E-Designation due to a previous onsite service station UST release. In addition, a previous Phase I and Phase II ESA identified a former dry cleaner with a chlorinated VOC release. Roux performed a focused Phase II ESA at the dry cleaner and determined the chlorinated solvent release was not a hazard. Roux obtained closure under the NYSDEC Spills group and the site was redeveloped with a restaurant, a pharmacy, and re-use of a former supermarket.
- Principal-in-Charge of the redevelopment and expansion of an automobile dealer/service center in New York, New York into the US Flagship dealer for a major European luxury car manufacturer. Supported client and legal team during lease negotiations. Worked closely with NYCOER to address NYCDEP "E" designation. Coordination with NYCOER to implement remedial investigation and develop a site materials management plan as part of the expansion. Also, worked closely with NYSDEC to address an on-site spill, as well as coordinate efforts to evaluate whether a 19,000-gallon dielectric fluid release by others impacted the site.
- Principal-in-Charge for the completion of Phase I and Phase II Environmental Site Assessment activities associated with a proposed mixed use redevelopment located in Westchester, New York waterfront. Work included management of subsurface investigation activities to characterize soil conditions, and working closely with client's architects and construction contractors to integrate the proposed site remediation into the project development plan (including evaluating multiple potential disposal scenarios). Site contaminants included hydrocarbons (including free-product plume from former USTs), and historic fill constituents.
- Principal-in-Charge of an 80-acre redevelopment in Yonkers, New York. Work included Phase I and Phase II investigations, asbestos surveys and abatement support and response to a free product impact form an adjacent landowner. Coordinated with NYSDEC and responsible party to address contamination issue and not impact client's construction schedule.
- Principal-in-Charge for the redevelopment of a property in Brooklyn, New York into supportive housing. Worked closely with NYCOER to address NYCDEP "E" designation. Coordination with NYCOER to implement remedial investigation and develop RAP/CHASP as part of the NYC VCP.
- Principal-in-Charge for the redevelopment of a property in the Bronx, New York into supportive housing. Worked closely with NYCDEP to address "E" designation. Coordination with NYCDEP to implement remedial investigation and develop RAP/CHASP as part of the redevelopment. Also performed an ASTM VEC to address vapor concerns.
- Principal-in-Charge of a NYSDEC BCP cleanup in Brooklyn, New York at a mixed use multifamily housing/neighborhood retail complex with an onsite dry cleaner. There is soil, groundwater, and vapor contamination from chlorinated VOCs from the former onsite dry cleaner as well as groundwater contamination from offsite dry cleaners. The remedy will consist of hot spot soil removal, SVE, *in situ* groundwater treatment and a negative pressure approach for vapor mitigation in the existing buildings.
- Principal-in-Charge of a Brownfield Redevelopment for a large vacant parcel (460 acres) on Long Island. The project involved an extensive investigation, UST, and PCB remediation; removal and proper disposal of numerous tanks, drums, abandoned vehicles and transformers; and participation in contentious public meetings. The site was redeveloped into a golf course and a senior care facility.
- Principal-in-Charge for a property transfer support project at a heavily contaminated (chlorinated volatile organic compounds form an adjacent dry cleaner and on site MGP waste) distribution facility in the Bronx, New York. The site was a former MGP being handled under the VCP in addition to an open petroleum spill under the regional spills group. Roux performed a Phase I for the buyer, a Phase II and remedial cost estimate for the owner and negotiated with the buyer's consultant and NYSDEC to limit the scope of the investigation and cleanup.
- Principal-in-Charge of investigation and remediation of a catastrophic heating oil release for a commercial office building in Brooklyn, New York. All work was performed under the oversight of the NYSDEC Spills Group and time was of the essence for the initial response as the heating season was fast approaching. Roux performed free product delineation and remediation and indoor air monitoring at adjacent buildings. Site closure was obtained from NYSDEC.
- Principal-in-Charge of a mixed-use (residential, retail, commercial) Brownfield redevelopment in the Bronx, New York. Project consisted of a Phase I and Phase II ESA to satisfy NYCDEP requirements. The media investigated included soil, groundwater, soil vapor, and building materials. During the Phase II ESA, Roux performed preliminary *in situ* waste characterization.
- Principal-in-Charge of an interior Brownfield Redevelopment of a PCB, metals, and hydrocarbon contaminated wire manufacturing facility in Westchester County, New York into use as a movie studio. Activities included delineation and characterization of building surfaces, design of a remediation program and interim cleanups to allow studio use as the project progressed.
- Principal-in-Charge of multiple phases of Brownfield Project for construction of a cogeneration facility in Brooklyn, New York. Project consisted of: construction oversight; environmental compliance monitoring; asbestos and lead paint abatement oversight; data evaluation and report preparation; soil, offshore sediment, and sewer effluent sampling; PCB-contaminated material remediation; preparation of a waste handling and disposal plan; and permitting.
- Principal-in-Charge of multiple retail developments in Harlem, New York. Work included Phase I and Phase II investigations to satisfy NYCDEP and lender requirements. Lead based paint

Joseph D. Duminuco, P.G.

Executive Vice President / Principal Hydrogeologist

and asbestos surveys were performed as part of due diligence. Extensive asbestos issues were identified in building materials and soil backfill. Worked with asbestos contractors to determine best abatement approaches for the redevelopments.

- Principal-in-Charge of a fast-paced property transfer environmental assessment at an electronics manufacturing facility contaminated with metals and solvents in Bridgeport, Connecticut. Project consisted of the development and implementation of a detailed field sampling plan within a one-week time frame: indoor and outdoor soil sampling and monitoring well installation; groundwater and sewer effluent sampling; asbestos survey and asbestos sampling; and a tidal influence assessment. Data was evaluated and a summary report was prepared within one week and a remedial alternatives evaluation and cost estimate was prepared in less than one week.
- Principal-in-Charge of a multi-phase RI/FS at a PCB and diesel-fuel contaminated railroad yard in New York City. The Site is on the state superfund list because PCBs were detected in soil, groundwater, hydrocarbon plume, sewer water and sewer sediment. Responsibilities include: preparation of work plans; delineation of PCB hot spots with immunoassays; sewer investigation including pumpouts, monitoring, flow measurements and video surveys prior to abandonment; investigation and remediation of numerous USTs including gasoline, solvents and fuel oils; support of construction activities; report preparation; negotiations with the NYSDEC/NYSDOH; participation in public meetings; and implementation of interim remedial measures to mitigate the PCB-contaminated hydrocarbon plume; interim remedial measures to mitigate PCB, PAH and lead contaminated soil hot spots; and agency acceptance of alternate cleanup levels for site soils that resulted in savings of over \$80 million.
- Project Coordinator of multi-year environmental consulting contracts with Amtrak and New Jersey Transit. Responsibilities include contract negotiations, workload/resource distribution, compliance with contract requirements including utilization of M/WBE contractors, client-staff liaison, adherence to budgets and schedules, and overall quality assurance.
- Principal-in-Charge of project to support the construction of a high speed rail program. Performed Phase I and II Environmental Site Assessments as part of due diligence at three major railyards. Prepared reports and presentations regarding environmental conditions to regulatory agencies and the design-build consortium. Performed pre-construction sampling and hot spot remediation programs. Also, prepared environmental contingency plans for construction contractors to follow.
- Principal-in-Charge of an investigation at a PCB and solvent-contaminated transformer manufacturing/repair facility in North Carolina. Responsibilities include preparation of a work plan and oversight of the project which consists of soil borings and sampling, immunoassay testing, monitoring well installation, groundwater sampling, report preparation, and remedial alternatives evaluation.
- Principal-in-Charge of an NPL Superfund Site in Delaware. Responsibilities include: the on-going performance monitoring of a groundwater extraction system. The remedial system was installed to capture a chlorinated solvent plume emanating from a former PVC manufacturing facility. In addition, prepared and implemented an RI work plan for a USEPA-required off-site investigation of adjacent chemical manufacturing facilities and a large petroleum refinery. Also included DNAPL investigation and deep aquifer study.
- Principal-in-Charge of a NJDEP-ECRA/ISRA investigation and cleanup involving groundwater and soil contamination at a pesticide formulation and distribution facility in New Jersey. Responsibilities include: delineating the nature and extent of the off-site contaminant plume; determining groundwater flow patterns in a two-aquifer system; using a three-dimensional computer model to determine proper location for extraction and injection wells; and preparing work plans and summary reports for NJDEP-required additional delineation of the nature and extent of on-site soil contamination.
- Project Director of all UST investigative and remedial work performed at service station sites in New England for a major oil company. Responsibilities included: preparation and negotiation of work orders; coordination of monitoring and sampling; communication with client, regulator and site owner contacts; management of technical aspects of all projects; strategy evaluation with client; administration of all contracts and operation and maintenance of remediation systems to mitigate UST releases which included groundwater pump and treat, product recovery, and soil venting systems.
- Project Manager of an RI/FS at a former electronics manufacturing facility in an industrial area of Long Island. Metals and solvents (plating wastes) were detected in on-site leach pools and in soil and groundwater. Responsibilities include reviewing and revising the work plan and providing technical oversight of the project, including: Geoprobe® drilling; soil sampling; soil-gas surveys; leach pool sediment sampling; monitoring well installation; groundwater sampling; geophysical mapping; report preparation; and negotiations with NYSDEC. Convinced NYSDEC that groundwater remediation was inappropriate in an industrialized area. Focused remediation to a few soil hot spots only.
- Principal-in-Charge of a multi-year quarterly monitoring and reporting program at a municipal landfill complex on Long Island, New York. The complex consists of multiple landfills, leachate containment systems and leachate holding tanks. Project involves collection of water level and water-quality data from dozens of monitoring wells, sampling of leachate containment systems, coordination with contract laboratory, data validation, data evaluation and report preparation.
- Provided litigation support for an industrial property owner where a tenant's manufacturing operations had resulted in contamination of the building in addition to soil and groundwater. Without prior notification or consent from the owner, the tenant had conducted a Phase II investigation and remediation activities to address metals and VOCs. Reviewed technical reports and prepared a work plan to address areas for further investigation and perform confirmatory sampling in support of the owner of the property. Provided deposition testimony in connection with the case.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 11 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 8 RCRA-CESQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 10/31/2017 has revealed that there are 62 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, has revealed that there are 14 NY UST sites within

State and tribal voluntary cleanup sites

NY VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the NY VCP list, as provided by EDR, has revealed that there are 2 NY VCP sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 10/31/2017 has revealed that there are 29 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there are 177 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 4 EDR MGP sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
CON EDISON - EAST 11	EAST 110TH - EAST 11	SE 1/4 - 1/2 (0.442 mi.)	450	1044
CON EDISON - EAST 10	108TH ST. WEST OF FI	SE 1/2 - 1 (0.533 mi.)	468	1085
CON EDISON - EAST 11	EAST 114TH - EAST 11	ESE 1/2 - 1 (0.685 mi.)	469	1085
CON EDISON - EAST 99	EAST 98TH - EAST 99T	S 1/2 - 1 (0.741 mi.)	470	1085

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto

EXECUTIVE SUMMARY

sites within approximately 0.125 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

ALL AMERICAN SVCE ST	19 E 109TH ST	WSW 0 - 1/8 (0.102 mi.)	G85	155

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110056326042

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

S105141956

gallon of unknown oil mixed with dirt on the floor of vault V2349. The source and cause of the spill is unknown, however, the cause may be a possible bottom leak of the transformer. There is a sewer connection and a concrete sump but the oil & dirt mix did not migrate towards the sump. Two solid samples from spill taken for PCB and Oil Id. For initial cleanup action, Mr. Grube put absorbent baloneys around the sump and disconnected the sump pump. The transformer is a G.E. 500 kV unit, serial # 546920. The fluid capacity as per the nameplate is 257 gallons. Prior PCB historical data indicates 47 ppm as per lab sequence #00-0487-001, dated 5/17/2000. 09/01/0 10:00 hrs J. Gnall # 19045 of the I&A reports that he has condemned the transformer in vault-2349 due to a bottom leak. A partial cleanup was done by W. Knipper # 05153, A. Peerrin # 18138. They bagged up 2 bags of dirt. They put down pads & pigs for further releases until the unit can be replaced. Lab Sequence #01-08747-001 TOTAL PCB 51 ppm. UPDATE: 9/06/01 Vito Mannino #56899 reported at 15:10 hrs. that 200 gallons was removed (drained) from the transformer. The capacity of the unit is 230 gallons (it is a 500 kVA unit). Therefore, approx. 30 gallons spilled onto the vault floor. The defective transformer is being removed on Friday, 9/07/01. The new transformer will be installed at a later date. UPDATE: 9/21/01 Danny Pace #13149, Supervisor-in-Training I&A North, reported at 11:00 hrs. on 9/21/01 that the cleanup of this vault was completed at 18:00 hrs. on 9/20/01."

Remarks: "1 gal unk oil in vault...clean up pending deenigerization of transformer...ref # 139242."

FINDS:

Registry ID: 110055431509

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

ERT DESK
"e2mis no 157505 @ 18:30 Flush A-Mech/ J. Carlin 17203. Reported to T. Haynes 82326 that 2 gallons of hydraulic fluid strayed in the air, onto 2 personnel vehicle and onto concrete and asphalt. The hose of the veh#60678 broke loose while the operator was flush a structure. A Buick Century- plate #BMV-5965 and a Jeep Cherokee plate #CXT-8721. No sewer/water was affected. Clean-up is in progress. Leak occurred at 18:15. Update 3-7-05 @ 19:30 A Drummings of eh&s has been notified and is enroute to the spill location. Clean harbors has been contacted for an emergency response team. Evan Altmann from clean harbors called and stated that he will try to put a team together to respond asap. He will call back as soon as he knows if he can get the resources to do the job. A B-ticket was generated by #9, the ticket # is me05005076. R Carty # 16186 reports that there is actually 5 vehicles (not 2) that have hydraulic fluid on them. The other vehicles involved are, a gray 2005 toyota corolla tag # aly 1400 ny, 1988 burgundy ford thunderbird tag # t10 1pu ny, late model gold chevy malibu tag # epm 8020 pa. Evan Altmann from clean harbors has reported that they will not be able to give us a speedy response, as per A Drummings we will try Clean Ventures next to inquire as to the availability of an emergency response team. A Drummings will determine the action needed to do the cleanup when he gets on location. Clean Ventures does have a crew available at this time. 03-07-05 19:56 Clean Ventures has a crew available and en route to do the clean-up on 3 vehicles. 2 of the vehicles have a small amount of hydraulic fluid on them, they will be going to a local car wash. As per A. Dummings - EHS person on location. Update 3-8-05 @ 02:05 R Carty # 16186 reports that the cleanup is complete as of 02:00. All 5 cars double washed and rinsed by clean venture contractor personnel. Cleanup supervisor was R Carty# 16186. A Drummings from eh&s was coordinating the cleanup plan. Fluid from the asphalt was cleaned up using oil absorbent pads and speedy dry. Vactor truck was referred to transportation for remediation of the broken hose Update 3/8/05 @ 9:59 Clean Venture washed 4 cars, 1 SUV, and 2 vans for a total of 7 vehicles. Droplets from mist of hydraulic oil was cleaned using absorbent pads and citrikleen from low end masonry wall of the adjacent elementary school (PS 101). One drum of wash water and absorbent pads collected for disposal."

Remarks:

"Hydraulic hose line broke. Spill occurred on 2 vehicles and the ground (concrete and asphalt). Truck # 60678. Con Ed- 157505"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "02/25/08-Hiralkumar Patel. spoke with FDNY. they found sheen on water. FDNY didn't found any leak from any vent pipe on either side of sidewalk. believes that oil delivery truck might leaked some oil while driving on street. whatever oil spilled was already drained into city drain with melting snow. nothing left to recover. DEP notified. spill was strictly on asphalt street. case closed."
Remarks: "Streached down the block, entered the gutter. Between 1st and 2nd ave. 245 110th street has the heaviest concentration. Unknown cause. Product is going into the sewer system because of the melting snow. Attempted clean up is underway. Unkown who is the responsible party, trying to determine who it is, perhaps a home delivery truck."

. Waste code: D040

. Waste name: TRICHLOROETHYLENE

. Waste code: F002

. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110004385148

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 6/23/2004 Sangesland spoke with Patty Badding of Environmental Mgmt. (908-604-2291) She says she arrived on the site of the tank pull after the tank had been pulled out by the contractor. Eight soil samples were taken from the pit. At the time they all looked clean and the area was backfilled. Lab results show that 3 of the 8 samples had some hits for some SVOC's. The area has already had a new cement slab laid down and a new building is under construction on the site. Ms. Badding will forward a report to DEC showing the soil sample results and request closure for the spill event. No soil contamination letter was sent. Consultant already was far along in the process and DEC is awaiting a final report. 8/25/05:The Department has recieved final report on this spill, a review of the report indicates that the spill the is no need for remediation.(akwa)"
Not reported
Remarks: "Soil tested for contamination."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "12/23/04 Tipple responded relieving Krimgold, PTC finally arrived and began cleanup. The gross cleanup will be completed 12/23 and the finish work is scheduled to proceed on 12/24. The building has been directed to test/repair/replace the fill line and test the system prior to it's next oil delivery. The building manager Juan (646-379-1603) employed by Levites Realty is aware of what needs to be done. UPDATING 1/14/05.....Tipple conducted a followup site inspection, the cleanup was completed on 12/27/04 when tipple visited. Manifests are to follow from PTC, "

Remarks: "Line going to the tank has a hole in it. Has not been cleaned up."

DEC Memo: "9/21/12 TJD TTF letter sent (on E-DOCS). 4/3/13 AFrischeisen intern Call with kate from Levites Realty. She referred me to Mike leon (Leon@levitesrealty.com) but also stated that the tank in question was removed in November 2012 and replaced with a new tank. I emailed Mike Leon (cc TJ DeMeo) asking him to send over all relevant documents. Email reproduced below: Hi Mr. Leon, I was referred to you by Kate at your office. My name is Alejandro Frischeisen, an intern for Tim DeMeo, at the NYS Department of Environmental Conservation. I'm writing in regards to the open spill case at 19-21 E 109th St in Manhattan, Spill # 1205657. We hadn't heard any updates following the tank test failure September 2012. According to your PBS registration #2-290726, the tank was closed in November 2012. Kate also stated that the old tank was removed and a new tank put in place. In order to move forward on the open spill case, I ask that you please send over the original tank test failure report, any soil samples/analyses that were taken to demonstrate no soil contamination, the documents for the installation of the new tank, and the subsequent tightness test performed on the new tank. These documents can all be emailed to Tim DeMeo at tjdemeo@gw.dec.state.ny.us. 9/8/16 TJD File review. PTC is no longer in business, however, as part of operations shutdown DEC DeMeo requested information regarding open spills called into hotline by PTC without any further documentation provided. In 8/11/16 letter report regarding this site, PTC provided the original failing tank test report. As per report, the spill was associated with a dry leak on 3K AST. As per above notes, the involved tank (AST) was replaced in November 2012. Property owner has failed to provide any documentation. As the tank test report indicates a dry leak and the tank has been removed/replaced, the spill is administratively closed. PTC report uploaded to DECDOCS."

DEC Memo: "10/07/12-Hiralkumar Patel. 11:25 AM:- spoke with Eric. he mentioned that the site has one 3,000 gal tank which was cleaned out recently. they delivered 1,000 gal oil to the tank and now the tank is empty. only 20 gal oil on floor and remaining product missing. Eric mentioned that Envirotrac is responding for investigation/cleanup. after confirming with DEC Austin, asked DEC Sharif to inspect the site. case assigned to DEC Sharif. 10/11/12 Responded on 10/07/12. 3,000 gallon AST cement covered failed tightness testing few days ago. Tank was repaired and held pressure. Delivery made on 10/07/12 morning for 1,000 gallon #2 and super discover oil spill around the tank. Approx 100 gallon recovered. Tank was empty. Apparently, rest of the oil lost in the subsurface. RiteWay was enroute to perform the surface clean up. Dave Lorthior from EnviroTrack was onsite during my visit, and will investigate the subsurface contamination.(sr)
12/19/2012 Closure report prepared by EnviroTrac in edocs. The concrete floor which was made of poor quality, porous concrete, was easily broken up. A second layer of concrete was encountered approx four inches beneath the first. The second layer was constructed of a strong, non-porous concrete which the jack hammer could not penetrate. Tank had three large holes. Exposed subfloor area shows no free product left. As per EnviroTrac's observation, the release did not impact the soil beneath the concrete, the release was almost entirely confined to the basement. All oil soaked debris and the concrete floor adjacent to the foundation wall had been removed and the lower concrete floor had been powerwashed. EnviroTrac attempted to install soil borings in the floor, but the jackhammer could not breakthrough the lower concrete. NFA required.(sr)"
Remarks: "Caller advised aprx 20 gal of oil spilled onto basement floor due to equipment failure. Caller advised Enviro Trac is enroute for clean up."

S104950659

CONTAMINATED DEBRIS THAT WAS BAGGED AND MOVED TO A BACK ROOM IN THE BASEMENT, AS WELL AS OTHER PETROLEUM CONTAMINATED AREAS. I INSTRUCTED CERCI TO GET A PROPERLY PERMITTED CONTRACTOR TO DISPOSE OF THE DEBRIS AND POWERWASH/VAC AND DISPOSE OF THE PETROLEUM, AND SUBMIT THE WASTE MANIFESTS TO THE DEPARTMENT. ON 3/26/01 CERCI CALLED ME AND INFORMED ME THAT HIS FORMER EMPLOYER, THE OWNERS OF 23 EAST 109TH STREET HAD INSTRUCTED HIM TO COVER UP THE PROBLEM AND SUBSEQUENTLY FIRED HIM FOR BEING UNSUCCESSFUL IN THIS COVERUP. 7/18/03 TIPPLE UPDATING//DOCUMENTATION REQUEST SENT. Soil impacted, was the impacted soil removed? 06/21/05 Spill transferred to Greco as part of Spill Closure Initiative. The above statement indicates a letter was sent, however, when this was transferred to the Central Office, there was no file accompanying it, so it cannot be determined who received the documentation request. Further compounding matters is the fact that there is apparently no 23 East 109th St. in Manhattan (Property Shark says the address can't be found). Have requested further support from the Region 2 Office. JDG 6/21/05 6/21/05 NYC website (ACRIS) indicates this address is synonymous with 1632/1640 Madison Ave (Block #01615, Lot 0014). The listed owner of that property is: Madison Central Realty LLC 25 W 43RD St New York NY 10036-7406 7/1/2004 6/21/05 A letter requesting spill remediation information was sent to the above address on 6/21/05. JDG 6/30/05 Talked to Castle Oil (718-579-3400), Jim Carey will call back. JDG 6/30/05 7/12/05 I received a call from Castle Oil and was told that they have no records of remediating (or being liable for) a release at this property. They also said that the NYFD often tells property owners to contact their oil deliver company when there is a release - even if the problem is not theirs. He suspects this to be the case here, as he still has the account with the building (meaning, if the owner thought it was the deliverers fault, they wouldn't still do business with them). 7/12/05 The property is apparently managed by ARC Realty, p.o. box 237108, New York, NY 10023 (212) 579-1500. Called ARC Realty and spoke with Temore Shafran, who manages the property. Mr. Shafran is motivated to close the spill, as they are trying to refinance the building and the bank is requiring they address the release. Mr. Shafran assumed Casle Oil remedied the site, as there have been no complaints, however, he had no records. He is checking into the matter and will call back. Mr. Shafran's cell # is 917-443-5519. JDG 7/12/05 The property is owned by Madison Central Realty, 125 W. 72 nd St., Suite 5R, New York, NY 10023 7/27/05 Scanned and sent photos of original release to Mr. Shafran. He is to get back to me soon. JDG 10/26/05 Contacted Mr. Shafran and he said he had been to the site and that there is no evidence any-longer of the release. He is to call back with th ecase manager's name. JDG 11/01/05 Files from the region appeared in Central Office and found old files indicating that a cleanup occurred on 3/23/01, however, the DEC inspection on 3/26/01 indicates that the cleanup was not complete (i.e., bags of petroleum contaminated material were moved to a seperate room, etc.). The new building owner claims the basement is clear of such items now and is preparing proof. How or when this extra cleanup occurred will likely never be known. JDG 11/01/05 12/14/05 The building propret manager (Saruhan Capin w/Solar Realty Management) provided photos of the basement which indicate the cleanup is now adequate. He also said that the basement has no petroleum odor, and residents have made no complaints regarding petroleum odor. As this was not a major release to begin with, this information appears adequate to close the spill. Photos are in EDOCs. JDG 12/14/05"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 180561
DEC Memo: "01/05/06: This spill transferred from J.Kolleeny to S.Kraszewski. No site investigation ever performed at this site. No tank closure report for tank 001, removed in 1998 or tank 002 which is closed in place. - SK 01/09/06: Reviewed Phase II Assessment Report from A.L. Eastmond and Sons Inc., submitted in the summer of 1998. This assessment was performed to discover the extent of the contamination found during excavation of tank #1 as well as satisfy the legal abandonment of tank #2. During excavation, all soil recovered from the site was disposed of via trucking to a designated landfill. All old piping was also removed and clean fill replaced the contaminated soil. No GW was encountered. Five post-excavation soil samples were taken from the pit: -one composite sample from each side of the pit -one composite sample taken from the bottom of the pit Lab analysis of the samples does not coincide with what is required by STARS Memo #1. Only TCLP parameters were followed, which is not a substitute for the VOC and SVOC contaminant list in STARS or TAGM 46. Soil samples analyzed under the STARS and TAGM memos in needed from this site. No free product or GW was encountered during excavation. - SK 03/22/06: This spill transferred to K.Tang. - SK 10/9/08: Spill reassigned to J.Kann. Spill 9402166 was closed to consolidate with this spill. Met with NYCHA and their consultant (Preferred Environmental) on October 3 to discuss requirements of the site. Proposed and agreed to the installation of 6 borings (collection of gw and soil from each). Work Plan will be submitted shortly. 11/19/08: J.Kann - Work Plan submitted on 11/19/08. 07/20/10: J.Kann - SIR received on 7/15/10 and edoced. 12/26/12 : J.Kann - comments on SIR emailed today and edoced. 7/29/13: J.Kann - revised SIR received on 4/18/13. Email approving additional delineation work sent to NYCHA on 5/17/13. Report due 11/18/13. 4/28/14: J.kann - visited the site. 4 additional wells are being installed. Gauged MW-2 and MW-3 while at the site. MW-2 has a sheen of thick oil and MW-3 had a sock placed in it with no oil staining and no oil detected in the well. Inspected the boiler room. Minimal staining on the east wall at the location where the wall meets the floor (no fresh oil). Some staining on the south wall/floor which appears more fresh. 11/20/14 - J.Kann - SIR received on 7/17/14. Monitoring well oil/water levels 12 week study received on 11/3/14 and under review. 06/05/2017: J.Kann - VEFR and recovering is on going. Quarterly reporting being completed. Spill reassigned to Andre Obligado. 8/29/17 - Obligado - I received and reviewed the 1st Quarter 2017 monitoring report. This site has no Remediation System. The site has a monitoring program only with oil absorbent socks in MW7. A sheen is observed intermittently in in MW3. Between September 2016 and March 2017, no LNAPL was observed in MW7."

Contact Name: MICHAEL MANDAC
DEC Memo: "9/8/17 - Obligado - I received an email from NYCT Mike Mandac indicating that NYCT has been cleaning up an on-going spill at a subway station affecting both the station and the tracks since 2014 without notifying NYCT System Safety. AS such no spill was previously reported to NYSDEC. The spill is on the southbound platform. Reportedly the intrusion occurs during the summer and the MOW track guys had to respond to oil on the tracks. Michael Mandac will submit a summary letter next week. 9/13/17 - Obligado - On 06?29?17, OSS received a spill call from OSS?Investigations regarding a spill of oil onto the subway tracks from the platform. The location of the incident was 110th Street and Lexington Avenue (6 Line) on the southbound platform, track marker 195+25. (Working on getting a map of the station.) OSS received a subsequent email from MOW Engineering with pictures and the incident report of oil on the station platform and tracks. I requested additional information from station maintenance and station environment. I received a series of incident reports from station environment dating back to 6/19/13, where it appears a portion of the ceiling and wall tiles were removed for engineers (but no mention of oil). The initial report (that I received from MOW Engineering) indicates that a spill was first noticed in 2014, but I was not able to obtain any incident report from 2014. Subsequent reports indicate that tar coming out from wall to the platform unsafe on 6/5/16, tar coming to platform from wall, people steps walk to the platform requesting to cover the area on 6/29/16, and water leaking from wall also tar substance on 7/5/16. Latest report is dated 06?29?17 with oil leaking from the platform onto the subway tracks, which was cleaned up by in?house staff. June 2017 incident report states that the source of oil is from 1774 Lexington Avenue. I m not sure how this was determined or if this is just a theory. I looked through DOB and DEP records, I was able to determine that building does have a #2 fuel oil boiler. I suppose it is possible that it could be the source of the oil but I m not willing to say yes or no either way. Mike asked if I would like to schedule a Site Inspection and I replied yes. I asked that he provide the as built as soon as possible so I could track down the source. 9/15/17 Obligado - I inspected the adjacent building at 1774

Lexington. The remote fill is located adjacent to the subway seep. I met with the Super and the Building Manager (Mike Guevara, who is the son of the owner Louis Guevara) . The Super confirmed that they had a leak in the remote fill port. He showed me the fill port. The fill port piping was located in a basement stairway hatch. Black staining was evident along the pipe and the walls of the vault. The floor was covered with plywood and it was not possible to see the condition of the floor underneath. The building Manager confirmed that a plumber is coming to fix the line. I told him that hiring a plumber to repair the line was not sufficient, that they had a spill form the line which appered to enter the subway and they need to expose the line under the sidewalk, excavate and remove any contaminated soil and properly dispose of it and collect endpoint samples, then repair the line. They would also need to assess the floor condition under the plywood below the stairwell. They would need to use a oil spill response/remediation contractor to perform these tasks. I provided the building manager the standard NYC PIN Contractor list via email upon returning to the office. I also sent to Lexington North Realty LTD a contaminated soil letter requiring the above and also notifying them that the a a Responsible Party for the spill to the subway with would need to be cleaned up with access approval by NYCT System Safety. 9/18/17 - Obligado - I spoke to Mike Guevara on the phone. He said they are in the process of procuring a contractor. He will contact me when they choose the contractor. 9/20/17 - Obligado - Mr. Guevara provided a copy of the last delivery receipt for 735 gallons of dyed #2 heating oil on 7/12/17. 9/20/17 - Obligado - I inspected the seep location again with Mike Mandac and NYCT maintenance staff. They removed the barrier and significant oil staining was observed seeping out of the wall. the oil appeared to be a heavy oil, like a #4 or a #6. The concrete behind the tile had been chipped out. Oil appeared to have been seeping through a conduit hole. The oil on the wall did not appear to be actively seeping. The oil had caked to the wall and solidified. Mike Mandac collected a sample for fingerprint analysis. There was also oil on the track. I sent an email to Mike Mandac after the meeting. Thanks for meeting me at the site today to show me the oil seep. As we observed, and as is evident from the below picture, the oil appears to be a heavier residual oil like a #4 or #6, however I will await the results of your fingerprint analysis to confirm this. According to the owner of the adjacent 1774 Lexington, which had the leaking fill, they have been burning #2 heating oil for 40 years. They also just provided me a delivery receipt for their last delivery in July of 735 gallons of dyed #2 Heating Oil. DEC PBS records show their tank has stored #2 fuel oil since at least as far back as 2006, and either #1, #2 or #4 oil as far back as 1992. So right now we still do not have a confirmed RP for this spill and I am continuing to investigate potential sources. In the meantime please confirm whether or not NYCT plans on performing the oil clean-up of the platform wall and the subway track. Also, the oil seems to be following a preferential pathway along with the steel conduit in the below photo. Could you try and find out what that conduit is for and where it goes. If we could trace the path of the conduit perhaps it could help determine where the oil is coming from. 9/21/17 - Obligado - I inspected a near by NYCHA apartment building with an open spill # located at 1480 Park Ave. Yelena provided recent groundwater results. One well, MW3 had a sheen. 3 wells, which are in between the tank field and the oil seep did not contain any product. This suggests the oil did not migrate

from this site to the seep location. Also, the NYCHA building has not stored #6 oil since at least 1998. The building now runs on gas with a #2 heating oil back up UST. This site does not appear to be the source of the spill to the subway. 9/26/17 - Obligado - I inspected P.S. 101 School located on 141 E. 111th Street. I met Munendra Sharma of NYCDOE Fuel Division. We were escorted to the former tank room by the super. The #6 oil tanks were removed in 2014 when the building converted to gas. The former tank vaults were very clean. No evidence of any spills. We inspected the oil fill lines where they entered the building, which were also clean with no evidence of spillage. I did not observe any sumps in the basement. Based on my visual inspection, this site does not appear to be the source of the spill based on visual observation. I called Riteway to confirm whether or not they had been retained by Lexington North Realty to perform the remote fill work. Riteway said they provided a proposal, which has not been signed yet. Anthony would call me back. I also inspected a church at 132 EAST 111TH STREET which was registered with a 2500 gallon #2 heating oil AST. I did not observe any evidence of oil spillage at the tank vault or at the fill which entered directly into the side of the building (no underground line). This site does not appear to be the source of the spill based on visual observations. 9/27/17 - Obligado - I inspected 1800 Lexington which was listed as having a 1500 gallon #4 heating oil tank. I met with the building maintenance and he said he doesn't have number #4 but rather #2. I told him the registration needs to be updated and displayed in the tank room. Also they need to show the fuel type on the tank and color code the fill port. I did not observe any significant oil spillage in the basement. The super emailed me delivery records going back to 1/2015 showing the building used #2 fuel oil. I replied back inquiring when exactly the building converted to #2 from #4. I contacted Mr. Guevara at 1774 Lex to inquire what the status of the fill line clean-up is. He said he will sign the contract with Riteway today and Riteway will contact me once the work is scheduled. I also asked him to provide more delivery records. 9/28/17 - Obligado - I emailed NYCT System Safety Michael Mandac to try and get the 110th Street Station System drawings. These drawings are necessary for the NYSDEC to determine the source of the oil. 10/6/17 - Obligado - I inspected the 1774 Lexington Avenue stairwell again after it had been cleaned and epoxy painted. Upon close inspection I observed a heavy oil seeping through the stairwell wall on the sidewalk side of the stairwell below the former remote fill area. Based on this inspection, I confirmed that 1774 is the source of the oil seep. there appears to be oil saturated soil in between the stairwell wall and the subway wall. The oil is seeping both into the stairwell and into the subway. 10/11/17 - Obligado - I sent a Stipulation Agreement and Corrective Action Plan to Lexington North Realty. I emailed copy to Mike Guevara (son of owner). The original sent via certified mail to address on PBS registration with receipt #70160750000112261632. Due date for Signature is October 30, 2017. Corrective Action Plan requires submission of RAWP within 30 days of the effective date. 10/16/17 - Obligado - Per USPS the item was delivered at 12:37 pm on October 14, 2017 in BAYSIDE, NY 11361. "

Remarks:

"The spill seems to be from a private property and it is on concrete ,rail road , not resources affected. Andre Obligado is an engineer from remediation dept region 2 . the initial cleanup has been completed."

DEC Memo:	"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHITOMIRSKY 1/13/2006 Reviewed free product recovery data. The site has a free product plume. Source is still unknown. Consultants are trying to determine a source prior to recommending a remedial strategy. IRM is implemented but has not been very successful. The permanent system is required. AZ 4/17/2006 Contacted John Busse (URS) and reviewed submitted Proposed Remedial Strategy for Free Product Recovery Only. The site has a free phase plume. URS initially proposed an extractive bioventing system, a groundwater extraction system and a free product recovery system. But the plan, which was approved by DEC, was never implemented the only feasible location for the treatment system was area which is owned by the New York City Housing Authority, and NYCHA would not grant the necessary permission. In November 2006 URS submitted a report which proposed weekly site visits to the site to recover free product and evaluate the results in three months. If this approach is not effective URS will submit to the DEC a DAR for a permanent free product recovery system. On 4/17/2006 John Busse stated that URS will submit to the DEC a plan for the permanent system soon. I stated that, under the existing conditions, free product plume should be addressed immediately and dissolved phase contamination and soil contamination plumes could be assessed later. AZ 6/7/2006 Reviewed a Design Analysis Report for the above referenced site submitted on May 1, 2006. The report states that based on the site monitoring data, free product was detected in MW-11, MW-13 and MW-18. URS proposed to install free product skimmer pumps in these wells. This proposal was approved. The effectiveness of free product recovery system performance should be evaluated in a quarter. A monitoring plan should be implemented. AZ 1/23/2007 At the meeting with DDC/URS on January 10, 2007, the site was discussed. Jane Staten informed that URS performs weekly free product recovery - a few gallons of product are recovered each time. Specs and drawings are being prepared. A contract will be bid in February 2007. AZ 8-13-2007 Reviewed Free Product Recovery Data Report dated April 25, 2007. The report stated that free product thickness ranged from 0.14' to 2.69' in MW-13. Manual bailing has had little impact on product levels. A permanent recovery system will be installed and operational by the end of summer 2007. AZ 2-20-2008 Reviewed Free Product Recovery Data through October 2007 submitted in November 2007. The Report stated that to date the effort to remove free product from wells MW-11, MW-13 and MW-18 has had little to no impact on product levels. The free product

S104503202

thickness ranged from 0.59' in MW-18 to 0.82' in MW-13. The report stated that the free product recovery system should be operational by the end of 2007. An e-mail was sent to DDC/URS: ...The report stated that the permanent free product recovery system should be operational by the end of 2007. The previous report dated April 2007 stated that the system will be installed and operational by the end of summer 2007. However, the system has yet to be installed. DEC requests that the permanent free product recovery system should be installed without delay. Several monitoring wells should be installed on Fifth Avenue west of monitoring wells MW-13, MW-18 and MW-11 to delineate the free phase plume. Site wells which do not contain free product should be sampled for dissolved VOCs and SVOCs. AZ 3-5-2008 Discussed the site with Jane Staten: two additional wells should be installed between MW-14 and WM-15 if utilities and structures allow. All wells should be gaged. AZ 8-13-2008 Reviewed Summary of Well Installation and Latest Groundwater Results. dated 6/11/2008. Wells MW-22 and MW-23 were installed across the street from EC 58. There is no dissolved groundwater contamination at the site. Wells MW-11, MW-13, and MW-18 contain free product. Franklin is currently constructing the product recovery system at the site. It is anticipated, according to URS, that the system will be operational by the end of June 2008. Three product recovery wells were installed at the locations of the wells that historically exhibited free product, including MW-11, MW-13, and MW-18. URS does not anticipate visiting the site to collect gw samples or gauge wells. I requested, via e-mail, that semi-annual site-wide free product gauging and groundwater sampling be performed to monitor site conditions and off-site plume migration. The results of monitoring and sampling should be included in the remediation system performance reports. 1-8-2009 Reviewed System Performance Monitoring data for July-October 2008. Franklin constructed the product recovery system that consisted of PetroXtractor oil skimmer pump installed in three wells. On July 25, 2008, URS re-installed well RW-02 (MW-13). On July 25, 2008, system began operating. After one week of operation, no product was detected in any recovery wells. 2 gallons of product was recovered from wells RW-01 and RW-03. URS recommended that the system be shut down temporarily. URS will gauge the wells monthly and if product is detected will resume system operation. AZ 5-19-09 Reviewed System Performance Monitoring data for November 2008 - February 2009. On January 31, 2009 the system began operating; however, the motors failed in two wells. Franklin has ordered new motors. Currently, only well RW-03 is exhibiting free product. AZ 1-6-09 Reviewed System Performance Monitoring data for November 2008 - February 2009. PetroXtractor oil skimmer pumps are installed in 3 three recovery wells RW-1 (formerly MW-11), RW-2(MW-13), RW-3(MW-18). On April 29, 09, Franklin operated W-1 and RW-2 every other week, RW-3 was operated continuously. All pumps were operated continuously beginning June 2009. AZ 2-9-2010 Reviewed System Performance Monitoring data for June - August 2009. No product was measured during this monitoring period. AZ 3-22-2010 Reviewed System Performance Monitoring data for September - November 2009. On September 9, 09 032 feet of product was detected in MW-8 which is located about 40 feet sidegradient of the extraction wells. Vacuum truck visited the site on September 17, 09. MW-8 exhibited free product of five occasions between 2001 and 2002 with measurements ranging from a sheen to 2.6'. AZ 6-30-2010 Reviewed System Performance Monitoring data for December 2009 - February 2010.

S104503202

Product was measured in RW-01 on January 13, 2010 (0.19'). Product is consistently detected in the holding tank for RW-1. Also product was detected in holding tank for RW-02. AZ 5-5-2011 An e-mail was sent to M. Abzagh, K. Shenahan and V. Brevdo: Dear Kevin, I have reviewed a Remediation Monitoring Data Report for the period of November 2010 through January 2011 and dated March 22, 2011. The report indicates that free product thickness has significantly increased in monitoring well MW-11 from 0.01' to 1.01' (January 10, 2011). URS recommended to collect free product with a vacuum truck. This recommendation is approved. However, URS also recommended dismantling of the existing product recovery system. I disagree with this recommendation. Due to the relatively high amount of free phase detected, the system should be modified or a new system should be installed. As an interim measure, vacuum truck could be utilized for free phase product removal. A source of free phase product should be investigated. A long term remedial strategy should be proposed for the site. URS should perform a field reconnaissance to identify the source of free phase product. Fingerprint analysis of the free product should be performed. A tank inventory should be compiled. A free phase plume map with the direction of groundwater flow should be submitted to DEC. A soil plume map with historical soil analysis should be included in the report. All wells should be monitored for free product quarterly. If there are no downgradient wells at the site, they should be installed. VOCs and SVOCs sampling and analysis could be performed semi-annually. I concur with the URS's proposal to re-sample MW-08 due to the recent detection of product. The presence of free product was previously reported in MW-10 (2.03 feet). This well was destroyed and should be re-installed. AZ 12-14-2011 An email was sent to URS/DDC/V. Brevdo: Dear Kevin, I have reviewed remediation monitoring data for the above site for the period of February 2011 through July 2011 and dated September 21, 2011. The report stated that product was detected in two wells and ranged from 0.01 to 0.76 feet. URS is performing s product removal using a vacuum truck. Groundwater sampling should be performed twice a year from all existing wells. A recovery system exists at the site. URS stated that the system was shut down because of the minimal amount of product recovered and consistent mechanical problems. However, following the shutdown, significant quantities of product in wells were detected. DEC previously requested repair and modification of the system. In order to accelerate removal of free product I reiterate this request to repair and modify the recovery system. AZ 8-9-2012 Reviewed report by URS dated March 26-2012 and received on 5-16-2012. URS stated that there is currently no contractor in line to repair and/or operate the system. Additionally, the past performance of the systems has proven to be ineffective and unreliable. Lacking a better recommendation, in the interim, URS will continue the efforts to collect product either via manual pumping or or with a vacuum truck. There is one closed in-place 550-gallon gasoline tank located beneath the apparatus floor. 0.61' of product was recorded in December 2011. AZ 3-1-2013 Reviewed report by URS dated Sept 26-2012. URS intends to restart one of the product recovery systems. Also, URS will attempt to investigate status and location of the tanks for the Taft Houses of NYC Housing Authority which has apartment buildings located around the engine company building and shares the same address. Also, URS will continue product recovery via manual pumping (twice per month). AZ 10-21-2013 Reviewed remediation monitoring data for the Fourth Quarter 2012 through the First Quarter 2013. Product was detected in

two monitoring wells MW-11(RW-01) and MW-18(RW-03). The product thickness ranged from 0.1' TO 0.58'. The total quantity of product removed from these wells during this period was estimated to be 11.5 gallons. The total estimated product collected in 2012 from both wells was 40.5 gallons, significantly higher than the estimated total of 7 gallons collected in 2011. AZ 2-6-2014 Reviewed remediation monitoring data for the Second and Third Quarter 2013. Product was detected in two monitoring wells MW-11(RW-01) and MW-18(RW-03). The product levels in these wells have been decreasing over the last several quarters, showing that the increased frequency of product collection events has improved product recovery. AZ 11-20-2014 Reviewed remediation monitoring data for the Fourth Quarter 2013 and First Quarter 2014. Product was detected in two monitoring wells MW-11(RW-01) and MW-18(RW-03). The product levels ranged from 0.03' to 0.54'. The total quantity of collected product was estimated to be 4.5 gallons. AZ 9-25-2015 Reviewed remediation monitoring data through the Fourth Quarter 2014. Product was detected in two monitoring wells MW-11(RW-01) and MW-18(RW-03). The product levels ranged from 0 to 0.27'. The total quantity of collected product was estimated to be 5.75 gal in 2014. AZ 1-25-2016 Reviewed remediation monitoring data through the First and Second Quarters of 2015. During the period from November 2014 through April 2015, product was not detected in any of the monitoring wells, including MW-11 and MW-10, Where product was most recently detected. petroleum absorbent socks were installed during the October 2014 sampling event in response to decreasing product levels observed in the last several quarters. As of the most recent monitoring event in April 2015, the first socks have not yet been replaced and are both 25% to 50% saturated. AZ 6-22-2016 Reviewed remediation monitoring data through the Third Quarter of 2015. During the period from May 2015 through September 2015, product was not detected in any of the monitoring wells, except MW-11 and MW-18. Product thickness ranged from 0.01' to 0.02' As of the most recent monitoring event in September 2015, the sock in MW-18 was 75% saturated and replaced. AZ 8-19-2016 Reviewed remediation monitoring data through the Fourth Quarter of 2015. During the period from October 2015 through December 2015, product was not detected in any of the monitoring wells, except MW-11 and MW-18. As of the most recent monitoring event in December 2015, the socks were 25-50% saturated and replaced in December 2015. URS has removed the absorbent socks from the wells to observe whether any product will collect in the wells. AZ 8-17-2017 Reviewed remediation monitoring data for the Third the Fourth Quarters of 2016. In the previous monitoring report for this site URS had requested closure of the spill number assigned to the Engine Company 58 site. However, subsequent to that report, product was again detected in two site monitoring wells. URS therefore rescinded the closure request. According to URS as the groundwater elevation increases, residual product is trapped in the formation and becomes immobile due to capillary forces. When the groundwater elevation decreases, trapped product is detected in the wells. From July to December 2016, product thickness ranged from 0.14' to 0.68' in MW-11 and MW-18. AZ "LEAKING UST CAUSED SPILL - THEY JUST GOT LAB RESULTS BACK TODAY TO CONFIRM SPILL OCCURRED - INVESTIGATION & REPORT WILL BE SENT TO DDC - REMEDIATION WILL TAKE PLACE IF NECESSARY. Also see spill # 9704554."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 11/02/05: This spill transferred from J.Kolleeny to S.Kraszewski. 12/23/05: Remedial investigation in 1993 advanced 7 MWs. FRee product encountered in two of the wells. Two recovery systems were installed to pump out the oil/water from the wells. REcords of prduct thickness are given in tables from Feb 1994 to April 1997. Last two dates record zero product in wells. No MW data since 1997 or reports for that matter. Tanks have been removed. - SK 01/27/06: This spill transferred from S.Kraszewski to Q.Abidi. 03/31/06: This spill transferred from Q. Abidi to Koon Tang. 09/25/08: J.Kann - Spill reassigned to J.Kann. Tank Closure work (excavation) performed in April 2008. Report dated July 2008 and prepared by PWGC (631-589-6353) indicated endpoints in northwestern wall contain minimal SVOCs above RSCOs. Groundwater sample did not indicate contamination. Regenox was applied to the excavation groundwater and northwestern wall. Structural limitations prevented further excavation along the northwestern wall. Spill closed based on this report. NFA."
Remarks: "pulled tank and found contamination."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110004516042

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110019762201

Environmental Interest/Information System

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Spiller Phone: (718) 378-7000
Spiller Extention: 28
DEC Region: 2
DER Facility ID: 356706
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO 3/8/04 TJD Location required to test tanks in attempt to track down source of petroleum contamination impacting 1261 Fifth Avenue (0310458). Tank Testing occurred on 3/5/04 by Eastmond (Manny). One Tank failed tightness test. Subsurface Investigation is required. TTF letter mailed today. 2/23/05 - Austin - project reassigned from DeMeo to Sawyer 3/1/05 - Austin - project reassigned from Sawyer to Tipple 4/4/05 F & N to conduct subsurface investigation. 12/8/05 - Raphael Ketani. I received a call from Ryan Vanmeter, the building's attorney. He wanted to know what information was available regarding the spill case. I told him there wasn't a physical case file in the office, only a spill report. 12/14/05 - Raphael Ketani. Mr. Vanmeter called again. He said that Fenley & Nicol is ready to start soil boring again, but there was some past disagreement as to where and how many borings were to be done. He said that the previous case manager from DEC wanted more borings and F&N wanted less. I told him that I didn't have the work plan in the files and to have F&N send it to me. He said he would. I received a call today from Christin Dillner ((631) 586-4900, ext 153) of Fenley & Nicol. She told me that the previous DEC case manager, Tim Demeo, had requested that 4 groundwater monitoring wells be installed in the basement. She said that the neighboring property (spill #0310458) had a tank failure in 12/03 and leaked #2 oil, as well as Villa Hermosa leaking #2 oil in 3/04. She added that the technicians will install 2 to 3 more wells in the basement and develop all of the existing wells. However, the owner of Villa Hermosa refuses to have any work done unless he gets a letter ordering him to do so. Ms. Dillner wants a letter from DEC ordering the work. I told her to send me the work plan and I will take a look at their proposal. She said she would. 12/15/05 - Raphael Ketani. I spoke to Matt of Tericon Environmental ((770) 623-0755). He is investigating the building for a potential buyer. He asked me about the status of the oil spill. I told him that F&N still has to submit an investigation plan. He said that he has a FOIL request with the DEC. 2/9/06-Vought-This spill transferred from DEC Tang to DEC Vought as per DEC Austin. 1/29/07-Vought-See also spill #0310458 and #0610453 for recent impact to adjacent DeSalles Residence. Letter from Alston & Bird, LLP (Ryan Van Meter 404-881-7000) dated 1/8/07. This firm represents Villa Hermosa Apartments. Enclosed please find a Remedial Investigation Report/Remedial Action Workplan.. . As you will note the investigation has eliminated the property as the source of release at the adjacent DeSales Assisted Living property, and only limited work should delineate the extent of release at the Property . Remedial Investigation Report (Marcor Remediation Inc-Jack Bally-610-269-3250 fax:610-269-3393). Report prepared for: AIMCO 639 Granite Street Suite 312 Braintree, MA. 11224 Report details soil and ground water investigation activities conducted in the area of a former discharge from a #2 fuel oil fill line located at the Villa Hermosa Apartment Complex . Based on the remedial activities detailed

VILLA HERMOSA APTS - BUILDING C (Continued)

S106385514

herein, soil and ground water impacts have been detected onsite. Additional investigation is proposed to be completed... A thin layer (<.10 thick) of free phase product was identified within the water table within the excavation. Groundwater encountered at 5 feet bsg. ...soil impacts have been delineated except to the north and east of the discharge . Three ASTs and their associated piping was tested on 3/5/06. An approximately 6000-gallon aboveground storage tank(AST) in Building C of the Villa Hermosa Apartment complex failed the tightness test within the ullage (dry)portion of the tank. Based on the tightness testing, it was determined that the fill port and the remote fill line for the AST, located on Madison Avenue between 107th and 108th Streets, had been compromised and a discharge had occurred . Following replacement of the fill line,staining was noted on the interior wall of the basement. Oil soaked debris was identified within a void space below the sidewalk to the east of the basement wall. The basement was subsequently removed and AES was retained to perform remedial activities. Approximately 120 55-gallon drums of impacted soil and debris were hand excavated and removed from the subject property . Excavation was completed to 4' below basement floor and horizontally expanded to walls. Excavation currently remains open. Borings installed north,east and south of building, the basement of the subject building and courtyard to the west of building C. Borings done via Geoprobe and hand augers. Groundwater was approximately 9'below grade. Soil samples analyticals show:3850ppb xylene(SB6 8.5-9'bg), 4240ppb 1,3,5-trimethylbenzene(SB6 8.5-9'). Refusal at shallow depths and void spaced prevented delineation to the north and east and numerous utilities are located immediately to east of property. Four temporary wells were installed and two wells previously installed were sampled. Groundwater analyticlas show no TAGM Groundwater Standard exceeedences and .54 benzene(TW12). However based on the limited aerial extent of ground water impacts to the south and west, the groundwater plume appears to be confined to the area immediately adjacent to the former discharge . Air samples collected from residence show that the discharge does not appear to have degraded air quality... Groundwater not always present in excavation. Report proposes installation of one recovery well in excavation. Therefore, not only are groundwater impacts limited to the former source area, the subject property is not the source of the impacts detected at the DeSale facility located at 1261 Fifth Avenue, and should be removed from consideration as a potential source of the DeSale impacts. Proposal for four soil borings and installation of three monitoring wells on north and east sides of property. DEC requires: 1)product fingerprinting 2)site visit and basement/sump inspection/excavation 3)DEC presence during delineation to the north and south 4)submission of TTF results for all onsite tanks including passing test for leaking UST above 5)well construction logs for MW1 and MW2 6)determination of groundwater flow direction 6)installation of three permanent wells to the east of excavation with monthly monitoring and quarterly sampling. Vought called and spoke to Jack Bally to set up site visit with site geologist (Jack Hernandez) and send return email to DEC Vought setting up site visit. 1/30/07-Vought-Received email from Jack Bally (Ballyj@marcor.com) and sent reply email requesting site visit and with preliminary requirements. 2/15/07-Vought-Received call and spoke to Ryan Van Meter (Alston & Bird 404-881-4795) who is attorney for property owner. 02/27/07-Vought-Site visit by Vought with: John Hernandez Brenan Environmental Inc ph: 908-918-1702 fax: 908-918-1707

jhernandez@bei-env.com Jack Bally MARCOR Remediation Inc. ph: 610-269-3250 fax: 610-269-3393 ballyj@marcor.com Carlo Arjona AIMCO Capital ph: 215-493-0502 fax: 215-493-4498 carlo.arjona@aimco.com Vought inspected excavation at 1600 Madison and excavation located under fill line. New fill line was installed inside old fill line. Free product in excavation but as per consultants groundwater not always present in excavation. Agreement was reached to have super perform weekly inspection of pit and record observations. If free product is detected he will contact consultants to perform recovery. A recovery sump or recovery well will be installed in the pit at 1600 Madison. Site visit was also performed with reps to DeSalles to examine impact. Stains noted but no liquid product has reappeared since cleanup by National. As per Janeski last time product showed up prior to 11/06 was approximately 1.5 years ago. All tank rooms and sumps were inspected at Villa Hermosa and no spills noted other than fill line excavation referred to previously. Villa Hermosa will submit remedial action plan. Vought also inspected boiler rooms and found no evidence of spills other than on Madison Avenue. Tank bottoms not visible as USTs. Free product still present in excavation at 1600 Madison Avenue. 3/20/07-Vought-Called Hernandez for updates and left message to return call. 11/24/08 Sangesland - Village Hermosa properties are being sold. Puchaser had 3 - 6,000 gal tanks at address 1596-1614 Madison tested. All 3 tanks failed. Charles Merritt of Merritt Engineering is doing Environmental work FOR PURCHASER. Merritt # 718-767-7997 - Cross Ref new TTF spill #0809556 12/05/08-Vought-Current file review by Vought: Fax from Fenley & Nicol (F&N) Kristin-2/26/07. Well construction logs for MW1 and MW2 showing screen in MW1 from 2'-23'bg and in MW2 from 3'-20'bg respectively. Proposed Supplemental Subsurface Investigation and Remedial Work Plan (TRC Charles Guder Ph:212-221-7822 Fax:212-221-7840). Objective of workplan is to demonstrate that the petroleum impacts observed in the basement of the adjacent DeSales property were not caused by the fill line failure at the Villa Hermosa property and to close the spill. A total of 120 55-gallon drums of petroleum contaminated soil was excavated. ...a thin layer of LNAPL (<0.10 inch) is occasionally observed on the water table... . One product recovery event was completed via vacuum truck in October 2006, removing 400 gallons of oily water . Subsurface investigation took place that included six soil borings, five temporary well points and sampling of two existing wells. Proposal for installation of two monitoring wells. Wells will be installed via hollow stem auger and a final letter report will be submitted to DEC. Proposal also to monitor excavation on monthly basis for free product after powerwashing bedrock. Two wells will also be installed into the base of the excavation. Report will be submitted to DEC after one year of implementation of remedial activities. Proposed Supplemental Subsurface Investigation and Remedial Work Plan (TRC)-2/20/08. Unless otherwise directed by NYSDEC, TRC will be mobilizing to begin this work in March 2008 . 12/05/08-Vought-Received message from Jesse Curl (AIMCO): Mr. Jesse Curl AIMCO - Boston 639 Granite Street, Suite 312 Braintree, MA 02184 Fax:(781) 849-7652 Phone:(781) 849-1471x105 and TRC sending in report showing Villa Hermosa not the source. 12/9/08-Vought-Site visit by Vought with Envirotrac (Lorthior), TRC Guder, TRC Eva, Metropolitan Realty (Bob, Frank and David Cruz-Beautiful Village Redevelopment Associates-917-299-7822). AIMCO sold property but retains liability with respect to tanks as per TRC Guder. Tank is 8000-gallon #2 fuel oil UST and tank was isolated and

VILLA HERMOSA APTS - BUILDING C (Continued)

S106385514

passed tank only test as per TRC Guder. Tank is a partially buried UST and not AST as registered. Two 6 recovery wells installed in recovery pit under sidewalk. Recovery pit filled with gravel. Recent monitoring of recovery wells shows that they have been dry since 11/3 and have been undergoing monthly monitoring. 12/12/08-Vought-Reviewed Subsurface Investigation and Spill Closure Report dated 12/8/08 and received on 12/9/08. History of investigation at Villa Hermosa includes the following: Building C failed tightness test on 3/5/04. Petroleum impacted soil excavation was performed to the depth of bedrock (approximately 4 feet below the vault slab floor and to the lateral extents of the vault. Six soil borings and two wells were installed. Bedrock excavation was steam cleaned in 11/08. Two wells were installed in excavation into the bedrock via pneumatic jackhammer. Monitoring on 12/2/08 showed no product in wells. (Note: DEC has opinion that free product has migrated beyond the structural boundaries of basement excavation due to excavation to structural limitations and installation of wells in solid bedrock will not yield free product due to non-storativity of bedrock and dominance of fracture flow in bedrock regime). Wells between Building C and DeSalles installed in 11/08. Groundwater present at a depth of 5' bg and wells installed to a depth of 13'. Screen depth is from 3 to 13' bg. Groundwater samples collected from wells in 11/08. Report concluded the following: the basement vault impacted by the fill line leak was excavated to bedrock and any remaining residual oil has been removed, the monitoring points installed in the excavation have been dry and free of LNAPL since they were installed on November 3, 2008, Historic and current groundwater data from groundwater monitoring wells located between the fill line leak and the DeSales property indicated that groundwater is not contaminated by petroleum. Therefore, TRC concludes that the fill line failure at the Villa Hermosa property was not the source of petroleum impacts observed in the basement of the adjacent DeSales property. Requests closure of spill. 04/10/09-Vought-Current file review by Vought: Letter from AMCO Curl to DEC Vought-12/8/08. Repeated TRC conclusion that Villa Hermosa was not source of spill to DeSales and also forwarded copy of CD with report. Tank Tightness Test Report (TRC Curl)-12/26/08. The Site contains three distinct buildings, known as Buildings A, B and C. Each building contains a fuel oil fired boiler and a steel petroleum tank containing #2 fuel oil which is used to supply fuel to the boiler. Building 'A' contains a 7,500-gallon tank, Building 'B' contains a 6,000-gallon tank, and Building 'C' contains an 8,000-gallon tank. Each tank is located in the basement of the building and the bottom 2 feet of each tank is vaulted and encased in concrete on top of the basement floor. See the following spill numbers: Building A-0810009 (TTF) Building B-0810012 (TTF) Building C-0313381, 0809556 (TTF, soil excavation and well installation). As part of AMICO's divestiture of the property, the prospective purchaser (Metropolitan Realty Group, LLC.) performed tightness testing of all three tank systems on 11/21/08. ATS reported that all three (3) tank systems failed when utilizing the Mesa 2-D test system, which is an acoustical test system. Isolation and retesting and repair work performed by ProTest. All three manways were replaced on tanks since the manhole gasket material was observed to be deteriorated. All three (3) tanks were found to be tight or not leaking when utilizing the EXY-3 Locator Plus test system. The following describes the repair work: Building A- The fill line was not tight and was replaced. After repair the tank system tested tight

VILLA HERMOSA APTS - BUILDING C (Continued)

S106385514

. Building B- The overfill whistle/vent line was not tight. The cause of this leak was determined to be deteriorated fittings and these were replaced. After repair, the tank system tested tight . Building C-The overfill whistle/vent line was not tight. The cause of this leak was determined to be deteriorated fittings and these were replaced. After repair, the tank system tested tight . The report recommends closure of spill 0809556. Passing tightness tests included for Buildings A, B and C. Letter from AIMCO Curll to DEC-1/7/09. Request for closure of spill 0809556. Email from AIMCO Curll to Vought-2/17/09. Email requesting update on report review. Email from AIMCO Curll to Vought-3/17/09. Email requesting update on report review. Site contacts: Bob Perine Metropolitan Realty Group LLC 15 West 39th Street, 7th Floor New York, NY 10018 Ph:(212)835-9040 Fax:(212)835-9059 email:bperine@metreal.com Charles Guder TRC ph:(212)221-7822x137 fax:(212)221-7840 email:cguder@trcsolutions.com 04/15/09-Vought-Discussed site with DEC Krimgold and AST requirements apply as per PBS as such DEC requires submission of monthly inspection records for past five years. If records cannot be produced than borings will have to be performed to insure no release. Spill #0809556 at same location for same tank closed and referred to this open spill. 04/17/09-Vought-Sent out letter to above addresses requiring 1)Submission of updated PBS application 2)biweekly groundwater monitoring, determination of groundwater flow direction and quarterly submission of reports 3)submission of well construction logs 4)submission of soil excavation sidewall samples from Building C 5)submission of monthly inspection records for past ten years 6)submission of ten year inspection reports 7)collection of soil and groundwater samples around the partially buried AST . Letter also included clause that Spill fund contractor must absolutely be present to collect duplicate samples and witness all borings... . 04/21/09-Vought-Received email from Curll with proposed site visit date for meeting with consultants on 5/7/09. Vought forwarded email to Envirotrac to determine their availability as well with cc to Janeski. Site meeting set up for 5/7 at 11am. 5/7/09-Vought-Site visit by Vought. Onsite were: Charles Guder(TRC) 212-221-7822x103 Stephen Evanoff(AIMCO)303-691-4560 Bob Perine(Metropolitan)347-366-4386 John Knief(East Coast Petroleum)-718-402-5107 Mark Ataman(Envirotrac)-631-924-3001 Frank Grassellino(Metropolitan)-212-835-9040 Scott Jaffee(Metropolitan)-212-835-9040 John Perotti(Merritt Engineering)-718-767-0923 Dave Lorthior(EnviroTrac)-631-924-3001 Topics of discussion included reasons for denial of no further action and above DEC requirements. Vought also discussed either installation of borings or suggested (but did not require) tank removal and replacement with full ASTs in order to ensure no further spills via lack of whole tank monitoring capabilities. 6/1/09-Vought-Received email from TRC Guder with attached letter. Letter dated 5/28/09.the following activities will be performed: 1. The three petroleum tanks on the site will be modified into aboveground storage tanks (ASTs). The work will be performed by a licensed fuel oil boiler repair and installation firm; 2. The resulting tank excavations will be inspected by the owner, the owners representative and the NYSDEC or their representative; 3. If visible petroleum contamination (i.e. free product) is not identified, endpoint soil and or groundwater samples will be collected in accordance with DER-10 .. 4. If visible petroleum contamination (i.e free product)is identified, work will stop and the owner, owner's representative, and

S106385514

NYSDEC will confer to determine further actions . The property owner is ready to begin this work immediately . They will contact DEC or rep to inform them of work start date. 06/5/09-Vought-Received email from TRC Guder that tank conversions to begin on 6/15/08 and Envirotrac cc'd on email. Vought to perform site visit that day as well. DEC requires: 1)Cc to ATS, Envirotrac, Beautiful Village and Janeski 2)Inspection of soil under partially buried USTs during conversion to full ASTs 3)DEC contractor presence when performing soil investigation 4)Submission of TTF results including failing and passing tests. 5)Determination of groundwater flow direction. 6)Well construction logs. 7)endpoints and/or field observations or pictures of basement excavation sidewalls. 8)Continuation of quarterly groundwater monitoring. 9)Updating of PBS registration to tank location of aboveground-10% or more below ground. 10)Tightness testing of abandoned underground supply return lines 11)determine if well screen in MW3 is at adequate depth. 6/15/09-Vought-Site visit by Vought with Envirotrac (Lorthior and Ataman), TRC Guder and Metropolitan (Jaffe and Perine) and Eastcoast Petroleum. Eastcoast beginning to remove piping and will weld eye-hooks onto ASTs and use 3 train hosts to lift AST. AST will be emptied and cleaned prior to lift. Contractor will remove concrete around partially buried ASTs prior to lift and will order steel saddles for ASTs to sit on and will also put concrete under ASTs. 06/16/09-Vought-Received call from and spoke to TRC Guder who indicated that structural engineer was onsite this morning and TRC would keep Vought copied on results of inspection. 06/18/09-Vought-On vacation from 6/19 to 6/29. DEC Patel on 6/23 to: 1)call Envirotrac (Lorthior) to see if contamination found under lifted ASTs and to ensure adequate documentation as possible source for PIN at adjacent site. Vought onsite with TRC Kevin, Envirotrac Lorthior, Frank Grassellino(Metropolitan), Scott Jaffee(Metropolitan), Bob Perine(Metropolitan), John Knief(East Coast Petroleum). 5000-gallon UST in Building B was lifted and no free product encountered and no grossly contaminated product found. Tank underlain by concrete (possibly second floor) and Envirotrac and TRC collected endpoint samples witnessed by all. Envirotrac collected tens sidewall samples and TRC collected five samples. No signs of holes in tank and possible oil staining on one tank. Structural engineer also onsite. Vought also noticed two abandoned fuel oil supply return lines that run underground to adjacent building and Vought informed Jaffee that lines must be tightness tested. Also well that showed free product (MW3) screen depth to be checked to ensure that it straddles water table. Vought on vacation from 8/19-8/29 and site to be managed by DEC Patel. Scope of work for next week will be placement of concrete over tank lifted and reconnection of lines. 06/23/09-Hiralkumar Patel. 3:15 PM:- received email from Dave. lines will be tested on 06/24/09 and second tank will be lifted on 06/26/09 from building A. 06/24/09-Hiralkumar Patel. 11:50 AM:- spoke with Dave. he mentioned that instead of testing lines, owner choose to dug lines out. they are excavating today. there is someone from envirotrac and will collect samples. 1:30 PM:- visited site. met Bob, Kevin (TRC) and Dave Lorthior (EnviroTrac). employees of East Coast were exposing old lines. found three lines in each excavation from Buildings A,B,C: one old supply line, one most recent return line and one for gauge pipe. found odor in excavation for building A. will remove pipes tomorrow. 06/25/09-Hiralkumar Patel. 12 PM:- visited site. pipes removed from ground. Dave collected endpoint samples from building B area before i reached to the site. Dave mentioned that one

VILLA HERMOSA APTS - BUILDING C (Continued)

S106385514

area nearby tank room foundation wall found contaminated. there was clean sand right underneath the lines, but after removing couple of inches of soil, they found possible contamination. after building B, samples collected at building C. pipes removed from ground. found leak in area near boiler room foundation wall. strong odors noticed in soil. no other area in excavation found with contamination. collected endpoint samples. asked Dave to collect soil sample on other side of foundation wall inside boiler room (to see any migration of oil inside boiler room crossing foundation wall). during soil sample collection, found another old pipe running perpendicular to supply/return lines adjacent to foundation wall. found old pipe was ended in boiler room nearby pump area, but other end needs to be investigated. will excavate tomorrow to find out other end of pipe. this newly found old pipe runs towards building B, towards impacted site. Active return line was leaking evidenced by heavy soil contamination directly underneath the pipe and fresh product on pipe surface and pipe metal was flaking. after collecting samples at building C, collected samples at building A. found petroleum odors in soil about 3-4 ft away from boiler room foundation wall. tank in building A will be lifted on 06/29/09. asked Bob not to throw pipes away. 06/29/09-Hiralkumar Patel. 9:27 AM:- left message for Gavin (631-767-4228). 9:35 AM:- received call from Gavin. haven't started lifted tank at building A. Gavin checked area outside of boiler room at building C where old abandoned pipe found. contractor excavated about 4 ft of concrete nearby boiler room foundation wall. Gavin will look for any contamination. will excavate more to trace pipe end. 06/30/09-Vought-Site visit by Vought and onsite were Dave(Metropolitan), Marc(Envirotrac) and Wes Lindemuth(TRC). Vought inspected current status of all three building and noted that soil contamination noted at abandoned supply return lines in Buildings A and B and heavy soil contamination noted at active underground return line in Building C. Active return line in Building C was heavily deteriorated. Soil samples collected from under AST at building A and no PID or odors noted in soil. BUILDING B-old supply and active return line and line for petrometer removed, awaiting soil analyticals from ten endpoint soil samples , PID hit noted in soil sample, excavation depth to 2'bg and no water in excavation. BUILDING A-old supply and active return line and line for petrometer removed, awaiting soil analyticals from four endpoint soil samples, Soil contamination noted under lines, excavation depth to 2'bg and no water in excavation. BUILDING C-old supply and active return line and line for petrometer removed, awaiting soil analyticals, heavy gross soil contamination noted under lines near boiler room foundation and hole noted in active return line, excavation depth to 2'bg and no water in excavation. Four endpoint soil samples collected. 07/02/09-Vought-Site visit by Vought with Envirotrac Lorthior, TRC Lindemuth and Metropolitan (Dave)and soil samples collected from under UST at Building C. Vought noted active leak from AST (AST was emptied before lift) coming from bottom of UST. Approximate 2' patch of fresh free product on concrete underlying void space under AST. Four endpoint samples collected by EnviroTrac and TRC. Vought spoke to Metropolitan Jaffee who requested to expedite center courtyard excavation and Vought discussed installation of test pits and or monitoring wells in courtyard. Meeting will be held with all parties once plans for center courtyard are finalized so that investigation and possibly remediation can coincide with courtyard development. 07/02/09-Vought-Sent email to Metropolitan, TRC and AIMCO requesting

MAP FINDINGS

VILLA HERMOSA APTS - BUILDING C (Continued)

S106385514

update on courtyard development schedule and also included following requirements to be performed by RP's: EnviroTrac-DEC 1) Inspection of soil under partially buried USTs and supply return lines during conversion to full ASTs and collection of endpoint samples. 2) DEC contractor presence when performing all soil investigations and sampling. 3) Determination of groundwater flow direction (surveying all monitoring wells). 4) Biweekly groundwater monitoring and quarterly groundwater sampling. 5) Submission of report with above information. 6) Interim ISR after completion of investigation by EnviroTrac and submission of report. 7) Examination of water table elevations in MW3 and MW4 and determination of screen depth via remote or well reinstallation of MW1 and MW2. AIMCO/Metropolitan-TRC 1) Submission of all TTF results including failing and passing tests. 2) Examination of water table elevations in MW3 and MW4 and determination of screen depth via remote or well reinstallation of MW1 and MW2. 3) Continuation of quarterly groundwater monitoring. 4) Updating of PBS registration to tank location of aboveground-10% or more below ground. 5) Excavation of contaminated soil if present (pending receipt of lab analyticals) around ASTs and/or piping runs 6) Well installation at areas of contamination once soil analyticals are received. 7) Installation of wells and/or test pits in center courtyard that is rescheduled for paving upon concurrence with DEC. 8) Repair and inspection of AST at Building C prior to fill due to leak observed on 7/2. 9) DRO and GRO on further soil samples. 07/7/09-Vought-Received email from TRC Guder including well construction logs for MW3 and MW4. MW1 and MW2 are of unknown construction as they were installed by others. Well installation logs for MW3 and MW4 shows screen from 3'bg to 13'bg. 07/09/09-Vought-Received email of soil results from Envirotrac and had them forwarded to all parties. Soil analyticals show the following concentrations above lab method detection limits suggesting that a spill did occur: 16ppb toluene(LB1), 20ppb 1,3,5-trimethylbenzene(LB1), 10ppb 4-isopropyltoluene(LB1), 1.7ppb sec-butylbenzene(LB2), 51ppb naphthalene(LB2), 4ppb ethylbenzene(LA3), 29ppb xylene(LA3), 68ppb 1,3,5-trimethylbenzene(LA3), 56ppb 1,2,4-trimethylbenzene(LA3), 56ppb naphthalene(LA3), 3.3ppb toluene(LA1), 2.6ppb xylene(LA1), 7.3ppb 1,3,5-trimethylbenzene(LA1), 6.5ppb 1,2,4-trimethylbenzene(LA1), 150ppb naphthalene(LA1), .20ppb toluene(LA2), 1.7ppb xylene(LA2), 4.9ppb 1,3,5-trimethylbenzene(LA2), 2.4ppb 1,2,4-trimethylbenzene(LA2), 340ppb naphthalene(LA2), 35ppb toluene (LC1), 210ppb xylene(LC1), 110ppb 1,3,5-trimethylbenzene(LC1), 420ppb 1,2,4-trimethylbenzene(LC1), 1200ppb naphthalene(LC1), 26ppb toluene(LC2), 79ppb ethylbenzene(LC2), 420ppb xylene(LC2), 1000ppb 1,3,5-trimethylbenzene(LC2), 4300ppb 1,2,4-trimethylbenzene(LC2), 25000ppb naphthalene(LC2). 07/23/09-Vought-Received email cc of FOIL request submitted to DEC Records Access Officer from John Osborn PC (Mark Pennington Ph:914-741-9870 Fax:914-741-9875) for specific records. 07/24/09-Vought-Received letter via email from Pennington that he was copied on email request for update on courtyard development and that Based on information, provided to date AIMCO cannot agree to this request. We need more information to understand DEC's position. We do not have a clear understanding of the screen depth concern, or of the purpose of this testing. Given the results of the extensive testing and site investigation performed by TRC to date, we have difficulty understanding why the Department is looking to AIMCO or Metropolitan Realty to perform or pay for the testing the Department proposes .

VILLA HERMOSA APTS - BUILDING C (Continued)

S106385514

Request for meeting and FOIL request also included. In the interim, TRC is making plans to take well elevations and analyze groundwater flow information at the site, which should be accomplished within the next several weeks. Request for update on FOIL request (to be handled by DEC Abdelsadek) and meeting times. 07/29/09-Vought-DEC Urda and Vought called and spoke with Pennington and informed him that FOIL request was received and being processed (Vought confirmed with DEC Abdelsadek that he had the FOIL request). DEC also requested that meeting take place once report with soil analyticals and groundwater flow direction received from EnviroTrac and Pennington concurred. Vought called and spoke to EnviroTrac (Lorthior) and confirmed that he was actively working on report submission including flow direction determination. 07/30/09-Vought-Note that site still on ISR Hotlist due to age of spill. After discussion with NYSOAG Buss and Riggi and RP must be identified to toll the 6 year statute of limitations for cost recovery and as such an RP must be included on an ISR. AG Riggi requested that ISR be sent up naming RPs with note that groundwater flow direction needed to be examined before initial demand letters sent. Vought and DEC Urda called and spoke to Pennington and informed him that DEC will wait until report including soil endpoint samples and groundwater flow direction is received from EnviroTrac prior to scheduling meeting. Vought also confirmed with DEC Abdelsadek that he did receive FOIL request and is processing and conveyed same information to Pennington. Vought and Urda spoke with AG Riggi who requested that ISR be sent with RP information and note that groundwater flow direction must be examined prior to sending initial demand letters. Riggi also requested that file be scanned and transmitted electronically. Received email request from TRC Guder notifying DEC Lorthior that their surveyor GEOD will be onsite on Monday (8/3/09) to survey wells. Request to confirm that sidewalk wells are in the overburden. Vought spoke to Lorthior and GEOD survey method requires that data processing may not be made available to DEC and as such Vought instructed Lorthior to perform groundwater survey independently if every step of groundwater flow direction cannot be independently confirmed via data processing. 08/04/09-Vought-Sent email to Lorthior and Guder with attachment of portion of report from Summary Findings and Field Activity Report (9/13/04) of written description of well installation (note no boring logs or well construction logs available). Vought Edocd file for FOIL request. 08/05/09-Vought-Called and spoke to Lorthior who was onsite during groundwater flow determination by TRC. As per Lorthior, no independent ways of conferring calculations and as such Vought required independent groundwater flow determination. Concrete was being broken in concrete starting from south end and pipe sticking out of ground. Report should be received from EnviroTrac within two weeks. Vought called Scott Jaffee(Metropolitan)-212-835-9040 and left message to return call to discuss necessity of soil excavation of contaminated soil in courtyard (Vought attempting to avoid redevelopment of courtyard followed by excavation of new concrete and contaminated soil at later date). Vought received callback from Jaffee and discussed courtyard development and need for soil excavation and possibly monitoring wells and or test pits. Jaffee will put development on hold until reports are received and determination of further action can be made. 08/18/09-Vought-Received email from NYSOAG Riggi that NYSOAG Alison Pesca will be assigned to cost recovery case. 08/26/09-Vought-Received email from EnviroTrac (Lorthior) that David Ortiz from Villa Hermosa wants assurance from

VILLA HERMOSA APTS - BUILDING C (Continued)

S106385514

DEC that tanks could be placed back into service. Vought called Ortiz (917-299-7822) and left message informing him that tanks could be placed into service as long as they met FDNY and DOB guidelines, passed a tightness test after the replacement of lines and that PBS registration was updated. 09/21/09-Vought-Reviewed draft investigation report submitted by EnviroTrac for piping run endpoint samples and AST removal samples (see 7/9/09 comments above), updated groundwater flow direction and sent comments back to EnviroTrac. Report concludes The removal of the subsurface piping at the site indicated that the return line for Building C was leaking , the presence of fuel oil compounds at the return lines for Buildings A and Building B despite being below current RSCO's, indicate a historical release of petroleum at these locations , soil samples collected beneath the tanks exhibited concentrations of petroleum associated SVOCs... , Groundwater in portions of the site appears to be migrating towards DeSales , Free phase product has been detected in some of the wells (MW3, MW4 and DEC-2)on a intermittent basis , Construction details for MW3 and MW4 are unavailable . Report recommends installation of wells west of Building B (between building B and DeSales courtyard, determination of construction of MW3 and MW4 with possible reinstallation, investigation of piping at Building C, continuation of biweekly monitoring and sampling and testing of all tanks and pipes as part of return to service. Meeting set up for 10/25 at 10am with DEC Austin, DEC Urda, NYSOAG Pesca, AIMCO Pennington and TRC Guder at Region 2 offices to discuss next step and cost recovery actions. 9/22/09-Vought-Reviewed email from TRC Guder dated 9/17/09 including well logs for MW1 and MW2, TRC split soil samples from piping endpoint samples, split samples from groundwater samples and groundwater contour map. Well construction logs for MW have 2' casing and 23' screen length and MW has 3' casing with 17' screen length. Groundwater contour map using wells MW1, MW2 and MW3 shows groundwater flow to the west toward fifth avenue. MW4 not used in groundwater contours. No site plan included with soil sample locations and as such cannot determine where samples collected from. Vought sent email to Guder requesting site plan with sampling locations. 9/24/09-Vought-Meeting scheduled at DEC on 10/25 at 10am with Pennington, Guder, AIMCO, DEC Austin, DEC Urda, Vought, EnviroTrac and NYSOAG Pesca. Received email from TRC Guder including site plan with sampling locations, requesting EnviroTracs survey information, note that he will provide his survey information and well construction logs for MW3 and MW4. Note that screen starts at 3'bg and groundwater data from EnviroTrac shows elevations at 2.79'bg(6/22/09), 2.85'bg(6/10/09), 2.9'bg(8/3/09) and as such this well is not suitable for collection of groundwater samples and monitoring. Vought reviewed split sample results from piping samples and noted that endpoint samples were missing from TRC for locations BB-PIPE-EP, BA-PIPE-EP, VH-BA-Ep-3, VH-BA-EP1, VH-BA-EP-2, BC-PIPE-EP. Soil analyticals show detections of compounds particular to fuel oil (despite being below TAGM RSCO's) including: 22ppb naphthalene(VHBBEP1), 77ppb phenanthrene(VHBBEP1), 29ppb naphthalene(VHBBEP2), 119ppb phenanthrene(VHBBEP2), 133ppb phenanthrene(VHBBEP4), 2ppb naphthalene(VHBCEP2), 541ppb phenanthrene(VHBCEP2), 16ppb acenaphthene(VHBCEP2), 82ppb anthracene(VHBCEP2), 83ppb anthracene(VHBCEP1), 70ppb phenanthrene(VHBCEP1). TRC groundwater data shows flow to the southwest however groundwater gradient map does not account for sump pit influence and must be resubmitted. Vought sent reply to TRC Guder

VILLA HERMOSA APTS - BUILDING C (Continued)

S106385514

with cc to all requesting survey info from EnviroTrac and also noted that both groundwater maps of EnviroTrac and TRC do not take account the operational sump of DeSales (which may cause component of groundwater flow directly from Villa Hermosa to DeSales) and possible sump in 1255 5th avenue. Vought called Janeski who confirmed presence of sump and that it operated frequently during rain events and turned on at various times throughout day (operated by float switch). Vought sent email to all parties noting fact that sump was not taken into account in flow maps. Janeski also mentioned that he could arrange site access for 1255 5th avenue (coop president is Gerald Buschell and no PBS registration for site) on 9/25 at 8am. Vought called and arranged site visit at 8am with EnviroTrac and left message of same for TRC Guder. Note meeting at DEC at 10am after site visit. Vought received callback from and spoke to TRC Guder who noted that he would not be able to attend site visit but stated there was no need for him to be there as DEC would be performing inspection.

09/25/09-Vought-Site visit by Vought and EnviroTrac(Lorthior) to DeSales and 1255 5th Avenue for inspection of sump. Vought and Lorthior met with Janeski and DeSales Super (Faton Halili) and inspected sump pit. Pit has numerous pipes leading to cinderblock lined box. Water surface present at 3' below grade in pit. As per Halili the sump only services piping that runs under basement floor but he is unsure of layout of piping. Janeski has building plans available for later inspection. Halili noted that basement has not flooded for years but was onsite for the oil seepage in 2003 which occurred during exceptionally heavy rains events. During one of the past flooding events Halili and super of 1255 5th Avenue (Peter) measured depth of basements below grade and determined that both basement floors are at same depth below grade. Halili pumped sump dry and depth to bottom is approximately 5'bg and cannot determine bottom of sump as filled with debris. No oil or oil staining observed in sump (possibly due to oil impact occurring 5 years ago). Vought and Lorthior inspected 1255 5th avenue and met with doorman (Ismael) who has been onsite for past 15 years. Ismael indicated building is using natural gas for the past 15 years and has never had an oil impact. Two sumps located in basement of 1255 5th avenue. Envirotrac (Lorthior) provided hard copy of Investigation Report (see notes from 9/21/09 above). 9/25/09-Vought-09/29/09-Vought-See spill number 0313381 (Villa Hermosa) for more information. Investigation by EnviroTrac at 1600 Madison Avenue (Villa Hermosa Spill 0313381, 0810009, 0810012) indicate that Villa is potential responsible party. Site visit by Vought and Lorthior to inspect sumps as well as inform Janeski of updates and perform basement inspection. Vought noted that impacted basement area was being used for rest areas of custodial staff with no additional seepage of petroleum but slight petroleum odor noted only in custodial area. Meeting at 9/25 at DEC offices between DEC, NYSOAG and Villa Hermosa reps. Meeting was held at DEC on 9/25 including DEC Vought, DEC Austin, DEC Urda, NYSOAG Alison Pesca, EnviroTrac Lorthior, TRC Guder(212-221-7822), Mark Pennington (917-456-0747) attorney for AIMCO-prior owner of Villa Hermosa) and AIMCO Stephen Evanoff(303-691-4560). Pennington indicated that there was no method of transport to DeSales and Vought mentioned that transport mechanism was groundwater. Decision reached to send STIP to Villa Hermosa for spill at Building C and also to send letter to Villa Hermosa informing them that work below will start on DeSales (as Villa Hermosa currently not willing to accept responsibility). Vought will draft STIP requirement for review by Austin and Urda and

VILLA HERMOSA APTS - BUILDING C (Continued)

S106385514

will also contact DJaneski and EnviroTrac to arrange scope of work that State funded contractor (EnviroTrac) will need to perform to restore basement (epoxy and drywall removal) of DeSales and install upgradient wells on Villa Hermosa property. Vought sent email to Janeski with notes from 9/29 above and FOIL request information. 09/29/09-Vought-See spill number 0313381 (Villa Hermosa) for more information. Investigation by EnviroTrac at 1600 Madison Avenue (Villa Hermosa Spill 0313381, 0810009, 0810012) indicate that Villa is potential responsible party. Site visit by Vought and Lorthior to inspect sumps as well as inform Janeski of updates and perform basement inspection. Vought noted that impacted basement area was being used for rest areas of custodial staff with no additional seepage of petroleum but slight petroleum odor noted only in custodial area. Meeting at 9/25 at DEC offices between DEC, NYSOAG and Villa Hermosa reps. Meeting was held at DEC on 9/25 including DEC Vought, DEC Austin, DEC Urda, NYSOAG Alison Pesca, EnviroTrac Lorthior, TRC Guder(212-221-7822), Mark Pennington (917-456-0747) attorney for AIMCO-prior owner of Villa Hermosa) and AIMCO Stephen Evanoff(303-691-4560). Pennington indicated that that there was no method of transport to DeSales and Vought mentioned that transport mechanism was groundwater. Decision reached to sent STIP to Villa Hermosa for spill at Building C and also to send letter to Villa Hermosa informing them that work below will start on DeSales (as Villa Hermosa currently not willing to accept responsibility). Vought will draft STIP requirement for review by Austin and Urda and will also contact DJaneski and EnviroTrac to arrange scope of work that State funded contractor (EnviroTrac) will need to perform to restore basement (epoxy and drywall removal) of DeSales and install upgradient wells on Villa Hermosa property. Vought sent email to Janeski with notes from 9/29 above and FOIL request information. 10/13/09-Vought-Drafted STIP with CAP including submission of passing and failing tank tests, reinstallation of MW3 and biweekly monitoring and quarterly groundwater sampling and submitted for review to DEC Urda an Austin. STIP to be sent to: Stephen Evanoff, PE, BCEE, CSP Aimco 4582 S Ulster Street Parkway Suite 1100 Denver, CO 80237 stephen.evanoff@aimco.com Office: 303.691.4560 Mobile: 303.884.1889 Fax: 303.300.3298 Vought called and spoke to Janeski and informed him that Vought would send email to him requesting approval to begin basement work. 10/14/09-Vought-Sent email to Janeski with CC to Pennington, Guder, Austin, Urda, Pesca requesting finalization of basement renovation plans for DeSales so that Department could perform work. Vought sent out STIP to AIMCO Evanoff for cleanup at Building C with deadline of submission of 11/16/09. CAP included reinstallation of MW3, biweekly monitoring and quarterly groundwater sampling and submission of passing and failing test results. Vought sent out Spill closure letters to Evanoff for spills number 0810009 and 0810012 as no cleanup required due to no TAGM 4046 Required Soil Cleanup Objective exceedences (albeit petroleum detections indicating a historical spill did occur). Vought sent email copy of STIP to Pennington and also requested access for EnviroTrac to install wells immediately upgradient of DeSales at Building B rear alleyway. Vought sent email request to TRC Guder requesting resubmission of updated groundwater map, facilitating access to DeSales if he wishes to survey sump elevation and requesting additional split sample analyticals BB-PIPE-EP, BA-PIPE-EP, VH-BA-EP-3, VH-BA-EP1, VH-BA-EP-2, BC-PIPE-EP. Vought sent email to Envirotrac Lorthior requesting resubmission of groundwater contour map.

10/21/09-Vought-Received split sample analyticals from TRC Guder for BB-PIPE-EP, BA-PIPE-EP, VH-BA-EP-3, VH-BA-EP1, VH-BA-EP-2, BC-PIPE-EP. Soil analyticals show: .59ppb ethylbenzene(BB-PIPE-EP), 2.1ppb 1,3,5-trimethylbenzene(BB-PIPE-EP), 1.0ppb xylene(BB-PIPE-EP), 334ppb phenanthrene(BB-PIPE-EP), 94.6ppb benzene(BC-PIPE-EP), 2680ppb ethylbenzene(BC-PIPE-EP), 17800ppb naphthalene(BC-PIPE-EP), 25300ppb 1,2,4-trimethylbenzene(BC-PIPE-EP), 19300ppb xylene(BC-PIPE-EP), 25.8ppb benzene(BA-PIPE-EP), 670ppb ethylbenzene(BA-PIPE-EP), 5520ppb naphthalene(BA-PIPE-EP), 199ppb toluene(BA-PIPE-EP), 4890ppb xylene(BA-PIPE-EP), 205ppb phenanthrene(VH-BA-EP-1), 17ppb naphthalene(VH-BA-EP-2), 488ppb phenanthrene(VH-BA-EP-2), 23ppb xylene(VH-BA-EP-3), 12900ppb phenanthrene(VH-BA-EP-3).

10/21/09-Vought-Requested groundwater contour map from TRC Guder that

Considering the discrepancies between the groundwater flow maps generated by Envirotrac and TRC the last time we provided groundwater flow analysis, it might be best to have only Envirotrac generate the flow map, to avoid the time and expense of trying to resolve potential additional discrepancies. However, if you could have David let me know when Envirotrac goes out to DeSales to gauge the sumps, we might (probably) want to observe. Vought replied with email with cc to Envirotrac that DEC will let TRC know of gauge dates and that DEC would require groundwater flow maps if contamination at Building C encountered water table. Finally, if the NYSDEC could provide Envirotrac's groundwater flow map when it is generated so we can review, it would be appreciated. 11/2/09-Vought-Received call from Wayne Miller (Prudential 770-395-8498) who is has provided loan to Metropolitan Realty. Vought discussed spill history, potential responsible parties and requirements for closure of this spill and also for cleanup at DeSalles (Spill 0310458). Miller mentioned that Prudential lending a large amount of money to Metropolitan Realty for upgrades (approx 54 million) and they are concerned with open spill and potential lien on property. 11/5/09-Vought-Initial Demand Letters from NYSOAG Pesca to AIMCO, Metropolitan Realty and BVRC Management Co 11/6/09-Vought-Spoke with NYSOAG Pesca and she received call from and spoke to Pennington as he inquired as to scope of work requirements on DeSalles. Vought noted that epoxy seal and dry wall removal was minimal requirements and further wells between DeSalles and source site (Villa Hermosa) will not be needed if responsibility is accepted for DeSalles cleanup and past costs.

11/10/09-Vought-Received email from AIMCO Evanoff with attached response to DEC Stipulation Agreement dated 10/14/09. We have identified several technical issues that we believe require clarification in the Corrective Action Plan (CAP) document. In addition we have a few process related concerns we would like to see addressed in the document. In summary we would like to see changes in the language of the CAP to address the following issues: Paragraph 1: Include a definition of separate phase hydrocarbons Paragraph 1: Clarify the range of acceptable interim remedial actions is separate phase hydrocarbons are observed in groundwater Paragraph 2: Clarify under what circumstances off-site sampling would be required. Paragraph 2: Modify the language about groundwater monitoring and sampling and make it clear that such monitoring/sampling would be for a finite period of time and clarify the criteria for ending the sampling/monitoring program. Paragraph 6: Include a standard for DE review of submittals for resolving disputes. Request for meeting with DEC Vought, TRC Guder and Evanoff to discuss the scope of the remedial investigation and the CAP.

11/14/09-Vought-Received email from TRC Guder requesting meeting to review draft scope of work and discuss proposed revisions to CAP. Meeting to be technical only. 11/19/09-Vought-Received email request from Scott Jaffee (Metropolitan Realty) requesting meeting with himself and his environmental consultants (Chuck Meritt-Meritt Engineering Mark Robbins-HydroTech). 11/24/09-Vought-Called and spoke to TRC Guder and also sent reply that Vought available week of 12/7 to meet. Called and spoke to Jaffee and agreed to one private meeting as well during week of 12/7. Jaffee also requested 30 day NYSOAG Initial Demand Request and Vought spoke to Urda and Pesca and they agreed to request as long as letter is received from Villa Hermosa representative acknowledging that the new deadline is 1/7/10. 12/7/09-Vought-Received copy of letter from Jaffee to NYSOAG Pesca requesting 30 day deadline extension of Initial Demand Letter. Meeting set with Jaffee (Metropolitan Realty), HydroTech and Merritt Engineering at DEC offices at 12/8 at 11:00am. 12/8/09-Vought-Called TRC Guder (Cell:646-660-1020) and spoke to Guder and he said that Metropolitan and AIMCO will be most likely be splitting remedial costs and costs incurred to Fund. After DEC meeting with Metropolitan Realty, Jaffee will follow up with AIMCO to discuss possible remedial action and cost recovery. Meeting at DEC with Metropolitan (Jaffee), HydroTech (Robbins) and Meritt (Chuck Meritt 631-617-6200). Vought discussed history of this spill number and spill number 0310458 and discussed scope of work including remediation of contamination found at building C and restoration of basement at DeSalles. Jaffee will discuss DEC requirements and STIP with his coworkers and AIMCO and respond to DEC and outstanding STIPULATION by 12/22. 1/5/10-Vought-Received call from and spoke with Metropolitan (Jaffee). He is finalizing agreement to take over cleanup from AIMCO. Once agreement is finalized he will sign and submit STIP to DEC. Hydrotech to also send in proposal for excavation and collection of endpoint samples at Building C as well as restoration of DeSalles basement. Jaffee also confirmed that he performed site visit to DeSalles and met with Janeski and reviewed scope of restoration. 1/6/10-Vought-Received call from and spoke to Jaffee and he is now in control of all remedial work and cost recovery issues as opposed to AIMCO. Jaffee requested copy of STIP so that he could sign and return it to DEC. He also noted that Vought would receive call from HydroTech Mark Robbins with regards to both the investigation/remediation at Building C as well as the restoration of the DeSalles basement. Jaffee also noted that he spoke with NYSOAG Pesca with regards to reimbursing Spill Fund for past costs and Pesca noted to Jaffee that she would have to confer with DEC on whether interest would be sought along with principal. Vought sent copy of STIP to Jaffee via email. Vought called and spoke to NYSOAG Pesca who indicated that she is seeking interest which is in agreement with prior discussion with DEC Austin and Vought. Pesca drafting settlement agreement and will send to Vought for review prior to sending to Jaffee. 1/11/10-Vought-STIP submitted to DEC Oliva for signature. 01/15/10-Vought-Received email with settlement agreement with Metropolitan from NYSOAG Pesca. Vought noted that as per recent conversation with EnviroTrac (Lorthior) that they have an additional 5K of bills to be submitted for reimbursement. Vought received copy of proposal for investigation/remediation at Building C and restoration Plans for DeSalles and requested a copy be sent to Janeski (restoration only) for his review and approval. Monies received for reimbursement to Fund as well. Vought reviewed proposal

S106385514

from HydroTech dated 1/14/10 and covered scopes for both Impact In Area of Building C and DeSalles Property Spill. Letter is addressed to Jaffee and includes cost proposal as well. Scope of work at Building C includes: Use of backhoe to excavate soil and collect endpoint samples (a total of five samples) for 89260/8270 with collection of bottom groundwater sample. A Remedial Action Report will be submitted to DEC. Proposal for DeSalles Restoration includes use of a DEC approved Epoxy Novolac Coating to seal bottom three feet of common wall between Villa Hermosa and DeSalles, note that HydroTech will need completed unobstructed access to all basement floor areas, Floor will be sanded/scoured with a concrete grinding machine and then application of primer followed by two coats of Novolac Epoxy. Vought sent email and spoke to Robbins noting approval of Plan pending inclusion of (minimum of five endpoint samples but final number to be determined in consultation with the DEC project manager) for excavation at Building C; inclusion of DEC will be notified to perform site visit to inspect excavation; confirmation of drywall removal at DeSalles; ventilation to prevent epoxy odors. HydroTech will submit ammended RAP to DEC. 2/2/10-Vought-Received email from HydroTech (Matli) that we will be performing the soil excavation at the above spill site on Tuesday, Feb 2nd, 2010. I will contact you on Monday, should this schedule is canceled due to an emergency. Once the fieldwork starts on Tuesday, I will call to notify you of the our presence at the site as we previously discussed. Our plan is to excavate and backfill the same day, after your inspection of the excavation. Vought sent note to all parties noting continued requirement of removal of drywall over all former seepage areas, installation of ventilation system to prevent epoxy. Vought also sent email to Janeski requesting review of proposed basement restoration plan. Site visit by Vought as limits of excavation reached as per Matli. Vought noted contaminated (dark grey/black) soil under footing wall of Building C however water seepage from point directly under stained area showed no sheen or free product. Vought required collection of five endpoint samples (four soil and one bottom groundwater). Results to be submitted to DEC. 3/11/10-Vought-Reviewed Remedial Action Report from HydroTech (Matli) dated 3/3/10. Excavation report including collection of three soil sidewall endpoint and one bottom groundwater endpoint samples. A total of 8.82 tons of soil were removed from the site. Excavation to the south limited by building foundations, to the west by a masonry wall and to the east and north until no more petroleum contaminated soil was encountered. Final excavation was 9'x 6' x 5'deep. No sheen was observed on the groundwater which accumulated in the bottom of the excavation pit. Soil analyticals show detections of petroleum contamination all below TAGM 4046 Required Soil Cleanup Objectives. Groundwater analyticals show detections of petroleum contaminants below TOGS 1.1.1 Groundwater Standards. Vought replied with email that for issuance of Spill Closure Letter the below requirements are needed. Vought also called and left message to Jaffee to return call to discuss Bill payment and RAP approval. 3/11/10-Vought-Received notice of bill payment from DEC Ligasse despite agreement of Metropolitan Realty to cover costs. Vought called and spoke to EnviroTrac who noted that billing issues should be referred to EnviroTrac Alisa Bubb. Vought sent copy of invoice to Jaffee and requested he contact Bubb for payment. Vought also sent email to DEC Ligasse to NOT pay bill. Vought received reply from Jaffee that Thanks for the e-mail don't quite understand it, would like to

Remarks: discuss the technical aspect of it. Also wondering and hoping you had a chance to review the Hydrotec Report and hoping and wondering. That I can receive the NFA letter and when you think I could get it. I don't have to tell you that the letter would be a great burden lifted for me. Thanks and looking forward to speaking to you soon . Vought received reply from Janeski to Matli that Paul, With the confirmation from Jeff that you will remove and replace the walls, we are ready. 3/15/10-Vought-Received call from and spoke to Jaffee who requested closure of this spill number and noted his continual agreement to perform restoration at DeSalles. Vought discussed with DEC Urda and DEC will send out STIP to Jaffee with CAP for DeSalles Basement restoration. Vought called EnvioTrac(Bubb) to see if she was contacted by Jaffee for bill payment. Bubb indicated that she had not been contacted by Jaffee to date. Vought copied on email from Jaffee to Bubb noting contact information for issuance of new bill. Vought discussed spill closure with DEC Austin and Urda and DEC will close this spill and issue separate STIP for basement restoration under spill #0310458. See spill #0310458 for further info on DeSalles basement restoration. Onsite meeting with Jaffee, Janeski and Perin and Jaffee signed STIP for restoration at DeSalles and Vought signed Spill Closure Letter for this spill. Spill closed by Vought. "

VILLA HERMOSA APTS - BUILDING B (Continued)

S109374798

file review by Vought: Tank Tightness Test Report (TRC Curll)-12/26/08. The Site contains three distinct buildings, known as Buildings A, B and C. Each building contains a fuel oil fired boiler and a steel petroleum tank containing #2 fuel oil which is used to supply fuel to the boiler. Building 'A' contains a 7,500-gallon tank, Building 'B' contains a 6,000-gallon tank, and Building 'C' contains an 8,000-gallon tank. Each tank is located in the basement of the building and the bottom 2 feet of each tank is vaulted and encased in concrete on top of the basement floor. See the following spill numbers: Building A-0810009 (TTF) Building B-0810012 (TTF) Building C-0313381, 0809556 (TTF, soil excavation and well installation). As part of AMICO's divestiture of the property, the prospective purchaser (Metropolitan Realty Group, LLC.) performed tightness testing of all three tank systems on 11/21/08. ATS reported that all three (3) tank systems failed when utilizing the Mesa 2-D test system, which is an acoustical test system. Isolation and retesting and repair work performed by ProTest. All three manways were replaced on tanks since the manhole gasket material was observed to be deteriorated. All three (3) tanks were found to be tight or not leaking when utilizing the EXY-3 Locator Plus test system. The following describes the repair work: Building A- The fill line was not tight and was replaced. After repair the tank system tested tight. Building B- The overfill whistle/vent line was not tight. The cause of this leak was determined to be deteriorated fittings and these were replaced. After repair, the tank system tested tight. Building C- The overfill whistle/vent line was not tight. The cause of this leak was determined to be deteriorated fittings and these were replaced. After repair, the tank system tested tight. The report recommends closure of spill 0809556. Passing tightness tests included for Buildings A, B and C. Letter from AIMCO Curll to DEC-1/7/09. Request for closure of spill 0809556. Email from AIMCO Curll to Vought-2/17/09. Email requesting update on report review. Email from AIMCO Curll to Vought-3/17/09. Email requesting update on report review. Site contacts: Bob Perine Metropolitan Realty Group LLC 15 West 39th Street, 7th Floor New York, NY 10018 Ph:(212)835-9040 Fax:(212)835-9059 email:bperine@metreal.com Charles Guder TRC ph:(212)221-7822x137 fax:(212)221-7840 email:cguder@trcsolutions.com 04/15/09-Vought-Discussed site with DEC Krimgold and AST requirements apply as per PBS as such DEC requires submission of monthly inspection records for past five years. If records cannot be produced than borings will have to be performed to insure no release. Spill #0809556 at same location for same tank closed and referred to this open spill. 04/17/09-Vought-Sent out letter to above addresses requiring 1)Submission of updated PBS application 2)biweekly groundwater monitoring, determination of groundwater flow direction and quarterly submission of reports 3)submission of well construction logs 4)submission of soil excavation sidewall samples from Building C 5)submission of monthly inspection records for past ten years 6)submission of ten year inspection reports 7)collection of soil and groundwater samples around the partially buried AST. Letter also included clause that Spill fund contractor must absolutely be present to collect duplicate samples and witness all borings... . 04/21/09-Vought-Received email from Curll with proposed site visit date for meeting with consultants on 5/7/09. Vought forwarded email to Envirotrac to determine their availability as well with cc to Janeski. Site meeting set up for 5/7 at 11am. 5/7/09-Vought-Site visit by Vought. Onsite were: Charles Guder(TRC) 212-221-7822x103

Jaffee(Metropolitan)-212-835-9040 John Perotti(Merri
Engineering)-718-767-0923 Dave Lorthior(EnviroTrac)-631-924-3001
Topics of discussion included reasons for denial of no further action
and above DEC requirements. Vought also discussed either installation
of borings or suggested (but did not require) tank removal and
replacement with full ASTs in order to ensure no further spills via
lack of whole tank monitoring capabilities. 6/1/09-Vought-Received
email from TRC Guder with attached letter. Letter dated 5/28/09.
....the following activities will be performed: 1. The three
petroleum tanks on the site will be modified into aboveground storage
tanks (ASTs). The work will be performed by a licensed fuel oil
boiler repair and installation firm; 2. The resulting tank
excavations will be inspected by the owner, the owners representative
and the NYSDEC or their representative; 3. If visible petroleum
contamination (i.e. free product) is not identified, endpoint soil
and or groundwater samples will be collected in accordance with
DER-10 .. 4. If visible petroleum contamination (i.e free product)is
identified, work will stop and the owner, owner's representative, and
NYSDEC will confer to determine further actions . The property owner
is ready to begin this work immediately . They will contact DEC or
rep to inform them of work start date. 06/5/09-Vought-Received email
from TRC Guder that tank conversions to begin on 6/15/08 and
Envirotrac cc'd on email. Vought to perform site visit that day as
well. DEC requires: 1)Cc to ATS, Envirotrac, Beautiful Village and
Janeski 2)Inspection of soil under partially buried USTs during
conversion to full ASTs 3)DEC contractor presence when performing
soil investigation 4)Submission of TTF results including failing and
passing tests. 5)Determination of groundwater flow direction. 6)Well
construction logs. 7)endpoints and/or field observations or pictures
of basement excavation sidewalls. 8)Continuation of quarterly
groundwater monitoring. 9)Updating of PBS registration to tank
location of aboveground-10% or more below ground. 6/15/09-Vought-Site
visit by Vought with Envirotrac (Lorthior and Ataman), TRC Guder and
Metropolitan (Jaffe and Perine) and Eastcoast Petroleum. Eastcoast
beginning to remove piping and will weld eye-hooks onto ASTs and use
3 train hosts to lift AST. AST will be emptied and cleaned prior to
lift. Contractor will remove concrete around partially buired ASTs
prior to lift and will order steel saddles for ASTs to sit on and
will also put concrete under ASTs. 06/16/09-Vought-Received call from
and spoke to TRC Guder who indicated that structural engineer was
onsite this morning and TRC would keep Vought copied on results of
inspection. 06/18/09-Vought-On vacation from 6/190 to 6/29. DEC Patel
on 6/23 to: 1)call Envirotrac (Lorthior) to see if contamination
found under lifted ASTs and to ensure adequate documentation as
possible source for PIN at adjacent site. Vought onsite with TRC
Kevin, Envirotrac Lorthior, Frank Grassellino(Metropolitan), Scott
Jaffee(Metropolitan), Bob Perine(Metropolitan), John Knief(East Coast
Petroleum). 5000-gallon UST in Building B was lifted and no free
product encountered and no grossly contaminated product found. Tank
underlain by concrete (possibly second floor) and Envirotrac and TRC
collected endpoint samples witnessed by all. Envirotrac collected
tens sidewall samples and TRC collected five samples. No signs of
holes in tank and possible oil staining on one tank. Structural

S109374798

engineer also onsite. Vought also noticed two abandoned fuel oil supply return lines that run underground to adjacent building and Vought informed Jaffee that lines must be tightness tested. Also well that showed free product (MW3) screen depth to be checked to ensure that is straddles water table. Vought on vacation from 8/19-8/29 and site to be managed by DEC Patel. Scope of work for next week will be placement of concrete over tank lifted and reconnection of lines. 06/23/09-Hiralkumar Patel. 3:15 PM:- received email from Dave. lines will be tested on 06/24/09 and second tank will be lifted on 06/26/09 from building A. 06/24/09-Hiralkumar Patel. 11:50 AM:- spoke with Dave. he mentioned that instead of testing lines, owner choose to dug lines out. they are excavating today. there is someone from envirotrac and will collect samples. 1:30 PM:- visited site. met Bob, Kevin (TRC) and Dave Lorthior (EnviroTrac). employees of East Coast were exposing old lines. found three lines in each excavation from Buildings A,B,C: one old supply line, one most recent return line and one for gauge pipe. found odor in excavation for building A. will remove pipes tomorrow. 06/25/09-Hiralkumar Patel. 12 PM:- visited site. pipes removed from ground. Dave collected endpoint samples from building B area before i reached to the site. Dave mentioned that one area nearby tank room foundation wall found contaminated. there was clean sand right underneath the lines, but after removing couple of inches of soil, they found possible contamination. after building B, samples collected at building C. pipes removed from ground. found leak in area near boiler room foundation wall. strong odors noticed in soil. no other area in excavation found with contamination. collected endpoint samples. asked Dave to collect soil sample on other side of foundation wall inside boiler room (to see any migration of oil inside boiler room crossing foundation wall). during soil sample collection, found another old pipe running perpendicular to supply/return lines adjacent to foundation wall. found old pipe was ended in boiler room nearby pump area, but other end needs to be investigated. will excavate tomorrow to find out other end of pipe. this newly found old pipe runs towards building B, towards impacted site. Active return line was leaking evidenced by heavy soil contamination directly underneath the pipe and fresh product on pipe surface and pipe metal was flaking. after collecting samples at building C, collected samples at building A. found petroleum odors in soil about 3-4 ft away from boiler room foundation wall. tank in building A will be lifted on 06/29/09. asked Bob not to throw pipes away. 06/29/09-Hiralkumar Patel. 9:27 AM:- left message for Gavin (631-767-4228). 9:35 AM:- received call from Gavin. haven't started lifted tank at building A. Gavin checked area outside of boiler room at building C where old abandoned pipe found. contractor excavated about 4 ft of concrete nearby boiler room foundation wall. Gavin will look for any contamination. will excavate more to trace pipe end. 06/30/09-Vought-Site visit by Vought and onsite were Dave(Metropolitan), Marc(Envirotrac) and Wes Lindemuth(TRC). Vought inspected current status of all three building and noted that soil contamination noted at abandoned supply return lines in Buildings A and B and heavy soil contamination noted at active underground return line in Building C. Active return line in Building C was heavily deteriorated. Soil samples collected from under AST at building A and no PID or odors noted in soil. BUILDING B-old supply and active return line and line for petrometer removed, awaiting soil analyticals, PID hit noted in soil sample, excavation depth to 2'bg and no water in excavation. BUILDING A-old supply and active return

VILLA HERMOSA APTS - BUILDING B (Continued)

S109374798

line and line for petrometer removed, awaiting soil analyticals, Soil contamination noted under lines, excavation depth to 2'bg and no water in excavation. BUILDING C-old supply and active return line and line for petrometer removed, awaiting soil analyticals, heavy gross soil contamination noted under lines near boiler room foundation and hole noted in active return line, excavation depth to 2'bg and no water in excavation. 07/02/09-Vought-Site visit by Vought and soil samples collected from under UST at Building C. Vought noted active leak from AST (AST was emptied before lift) coming from bottom of UST. Approximate 2' patch of fresh free product on concrete underlying void space under AST. Vought spoke to Metropolitan Jaffee who requested to expedite center courtyard excavation and Vought discussed installation of test pits and or monitoring wells in courtyard. Meeting will be held with all parties once plans for center courtyard are finalized so that investigation and possibly remediation can coincide with courtyard development.

09/21/09-Vought-Reviewed draft investigation report submitted by EnviroTrac for piping run endpoint samples and AST removal samples (see 7/9/09 comments above), updated groundwater flow direction and sent comments back to EnviroTrac. Report concludes The removal of the subsurface piping at the site indicated that the return line for Building C was leaking , the presence of fuel oil compounds at the return lines for Buildings A and Building B despite being below current RSCO's', indicate a historical release of petroleum at these locations , soil samples collected beneath the tanks exhibited concentrations of petroleum associated SVOCs... , Groundwater in portions of the site appears to be migrating towards DeSales , Free phase product has been detected in some of the wells (MW3, MW4 and DEC-2)on a intermittent basis , Construction details for MW3 and MW4 are unavailable . Report recommends installation of wells west of Building B (between building B and DeSales courtyard, determination of construction of MW3 and MW4 with possible reinstallation, investigation of piping at Building C, continuation of biweekly monitoring and sampling and testing of all tanks and pipes as part of return to service. Meeting set up for 10/25 at 10am with DEC Austin, DEC Urda, NYSOAG Pesca, AIMCO Pennington and TRC Guder at Region 2 offices to discuss next step and cost recovery actions.

9/22/09-Vought-Reviewed email from TRC Guder dated 9/17/09 including well logs for MW1 and MW2, TRC split soil samples from piping endpoint samples, split samples from groundwater samples and groundwater contour map. Well construction logs for MW have 2' casing and 23' screen length and MW has 3' casing with 17' screen length. Groundwater contour map using wells MW1, MW2 and MW3 shows groundwater flow to the west toward fifth avenue. MW4 not used in groundwater contours. No site plan included with soil sample locations and as such cannot determine where samples collected from. Vought sent email to Guder requesting site plan with sampling locations. 9/24/09-Vought-Meeting scheduled at DEC on 10/25 at 10am with Pennington, Guder, AIMCO, DEC Austin, DEC Urda, Vought, EnviroTrac and NYSOAG Pesca. Received email from TRC Guder including site plan with sampling locations, requesting EnviroTracs survey information, note that he will provide his survey information and well construction logs for MW3 and MW4. Note that screen starts at 3'bg and groundwater data from EnviroTrac shows elevations at 2.79'bg(6/22/09), 2.85'bg(6/10/09), 2.9'bg(8/3/09) and as such this well is not suitable for collection of groundwater samples and monitoring. Vought reviewed split sample results from piping samples

VILLA HERMOSA APTS - BUILDING B (Continued)

S109374798

and noted that endpoint samples were missing from TRC for locations BB-PIPE-EP, BA-PIPE-EP, VH-BA-Ep-3, VH-BA-EP1, VH-BA-EP-2, BC-PIPE-EP. Soil analyticals show detections of compounds particular to fuel oil (despite being below TAGM RSCO's) including: 22ppb naphthalene(VHBBEP1), 77ppb phenanthrene(VHBBEP1), 29ppb naphthalene(VHBBEP2), 119ppb phenanthrene(VHBBEP2), 133ppb phenanthrene(VHBBEP4), 2ppb naphthalene(VHBCEP2), 541ppb phenanthrene(VHBCEP2), 16ppb acenaphthene(VHBCEP2), 82ppb anthracene(VHBCEP2), 83ppb anthracene(VHBCEP1), 70ppb phenanthrene(VHBCEP1). TRC groundwater data shows flow to the southwest however groundwater gradient map does not account for sump pit influence and must be resubmitted. Vought sent reply to TRC Guder with cc to all requesting survey info from EnviroTrac and also noted that both groundwater maps of EnviroTrac and TRC do not take account the operational sump of DeSales (which may cause component of groundwater flow directly from Villa Hermosa to DeSales) and possible sump in 1255 5th avenue. Vought called Janeski who confirmed presence of sump and that it operated frequently during rain events and turned on at various times throughout day (operated by float switch). Vought sent email to all parties noting fact that sump was not taken into account in flow maps. Janeski also mentioned that he could arrange site access for 1255 5th avenue (coop president is Gerald Buschell and no PBS registration for site) on 9/25 at 8am. Vought called and arranged site visit at 8am with EnviroTrac and left message of same for TRC Guder. Note meeting at DEC at 10am after site visit. Vought received callback from and spoke to TRC Guder who noted that he would not be able to attend site visit but stated there was no need for him to be there as DEC would be performing inspection.

09/25/09-Vought-Site visit by Vought and EnviroTrac(Lorthior) to DeSales and 1255 5th Avenue for inspection of sump. Vought and Lorthior met with Janeski and DeSales Super (Faton Halili) and inspected sump pit. Pit has numerous pipes leading to cinderblock lined box. Water surface present at 3' below grade in pit. As per Halili the sump only services piping that runs under basement floor but he is unsure of layout of piping. Janeski has building plans available for later inspection. Halili noted that basement has not flooded for years but was onsite for the oil seepage in 2003 which occurred during exceptionally heavy rains events. During one of the past flooding events Halili and super of 1255 5th Avenue (Peter) measured depth of basements below grade and determined that both basement floors are at same depth below grade. Halili pumped sump dry and depth to bottom is approximately 5'bg and cannot determine bottom of sump as filled with debris. No oil or oil staining observed in sump (possibly due to oil impact occurring 5 years ago). Vought and Lorthior inspected 1255 5th avenue and met with doorman (Ismael) who has been onsite for past 15 years. Ismael indicated building is using natural gas for the past 15 years and has never had an oil impact. Two sumps located in basement of 1255 5th avenue. Envirotrac (Lorthior) provided hard copy of Investigation Report (see notes from 9/21/09 above). 9/25/09-Vought-09/29/09-Vought-See spill number 0313381 (Villa Hermosa) for more information. Investigation by EnviroTrac at 1600 Madison Avenue (Villa Hermosa Spill 0313381, 0810009, 0810012) indicate that Villa is potential responsible party. Site visit by Vought and Lorthior to inspect sumps as well as inform Janeski of updates and perform basement inspection. Vought noted that impacted basement area was being used for rest areas of custodial staff with no additional seepage of petroleum but slight petroleum

odor noted only in custodial area. Meeting at 9/25 at DEC offices between DEC, NYSOAG and Villa Hermosa reps. Meeting was held at DEC on 9/25 including DEC Vought, DEC Austin, DEC Urda, NYSOAG Alison Pesca, EnviroTrac Lorthior, TRC Guder(212-221-7822), Mark Pennington (917-456-0747) attorney for AIMCO-prior owner of Villa Hermosa) and AIMCO Stephen Evanoff(303-691-4560). Pennington indicated that there was no method of transport to DeSales and Vought mentioned that transport mechanism was groundwater. Decision reached to sent STIP to Villa Hermosa for spill at Building C and also to send letter to Villa Hermosa informing them that work below will start on DeSales (as Villa Hermosa currently not willing to accept responsibility). Vought will draft STIP requirement for review by Austin and Urda and will also contact DJaneski and EnviroTrac to arrange scope of work that State funded contractor (EnviroTrac) will need to perform to restore basement (epoxy and drywall removal) of DeSales and install upgradient wells on Villa Hermosa property. Vought sent email to Janeski with notes from 9/29 above and FOIL request information. 10/13/09-Vought-Drafted STIP with CAP including submission of passing and failing tank tests, reinstallation of MW3 and biweekly monitoring and quarterly groundwater sampling and submitted for review to DEC Urda an Austin. STIP to be sent to: Stephen Evanoff, PE, BCEE, CSP Aimco 4582 S Ulster Street Parkway Suite 1100 Denver, CO 80237 stephen.evanoff@aimco.com Office: 303.691.4560 Mobile: 303.884.1889 Fax: 303.300.3298 Vought called and spoke to Janeski and informed him that Vought would send email to him requesting approval to begin basement work. 10/14/09-Vought-Sent email to Janeski with CC to Pennington, Guder, Austin, Urda, Pesca requesting finalization of basement renovation plans for DeSales so that Department could perform work. Vought sent out STIP to AIMCO Evanoff for cleanup at Building C under spill 0313381. CAP included reinstallation of MW3, biweekly monitoring and quarterly groundwater sampling and submission of passing and failing test results. Vought sent SCL letter to AIMCO for this Spill at Building B as endpoint samples are below TAGM Required Soil Cleanup Objectives. For analyticals and report see report entitled Investigation Report for Spill 0310458 from EnviroTrac dated 9/21/09. See spill #0310458 for ongoing DeSales cleanup and open Spill #0313381 for Villa Hermosa Building C cleanup.

Remarks:

"See also open spill #0809556, as per report fill pipe is on 108th st, air leak, isolate, 2 burners, pumps and petrometer. Tank is 5000 gallon #2 fuel oil tank."

VILLA HERMOSA APTS - BUILDING A (Continued)

S109374773

evidence of concrete staining under former leak location. Concrete in good condition at point of leak and no soil investigation required as no soil affected by spill from fill line. Fill line does not run under sidewalk. Tank, supply/return and fill lines were isolated and passed test. Tank previously tested in 2005. DEC requires TTF letter: 1)Cc to ATS, Beautiful Village, Envirotrac and Janeski 2)USTs associated requirements or investigation via soil borings. 3)DEC presence when performing soil investigation adjacent to UST 4)Submission of Updated PBS registration. 5)Fingerprinting at both sites if well installation at Villa Hermosa shows presence of petroleum contamination. 6)call to Metropolitan and if determination that tanks will remain USTs then associated UST requirements. If wish to register tanks as ASTs then excavation and replacement of tanks required. 7)submission of TTF results including failing and passing tests. 04/10/09-Vought-Current file review by Vought: Tank Tightness Test Report (TRC Curll)-12/26/08. The Site contains three distinct buildings, known as Buildings A, B and C. Each building contains a fuel oil fired boiler and a steel petroleum tank containing #2 fuel oil which is used to supply fuel to the boiler. Building 'A' contains a 7,500-gallon tank Building 'B' contains a 6,000-gallon tank, and Building 'C' contains an 8,000-gallon tank. Each tank is located in the basement of the building and the bottom 2 feet of each tank is vaulted and encased in concrete on top of the basement floor. See the following spill numbers: Building A-0810009 (TTF) Building B-0810012 (TTF) Building C-0313381, 0809556 (TTF, soil excavation and well installation). As part of AMICO's divestiture of the property, the prospective purchaser (Metropolitan Realty Group, LLC.) performed tightness testing of all three tank systems on 11/21/08. ATS reported that all three (3) tank systems failed when utilizing the Mesa 2-D test system, which is an acoustical test system. Isolation and retesting and repair work performed by ProTest. All three manways were replaced on tanks since the manhole gasket material was observed to be deteriorated. All three (3) tanks were found to be tight or not leaking when utilizing the EXY-3 Locator Plus test system. The following describes the repair work: Building A- The fill line was not tight and was replaced. After repair the tank system tested tight. Building B- The overflow whistle/vent line was not tight. The cause of this leak was determined to be deteriorated fittings and these were replaced. After repair, the tank system tested tight. Building C-The overflow whistle/vent line was not tight. The cause of this leak was determined to be deteriorated fittings and these were replaced. After repair, the tank system tested tight. The report recommends closure of spill 0809556. Passing tightness tests included for Buildings A, B and C. Letter from AIMCO Curll to DEC-1/7/09. Request for closure of spill 0809556. Email from AIMCO Curll to Vought-2/17/09. Email requesting update on report review. Email from AIMCO Curll to Vought-3/17/09. Email requesting update on report review. Site contacts: Bob Perine Metropolitan Realty Group LLC 15 West 39th Street, 7th Floor New York, NY 10018 Ph:(212)835-9040 Fax:(212)835-9059 email:bperine@metreal.com Charles Guder TRC ph:(212)221-7822x137 fax:(212)221-7840 email:cguder@trcsolutions.com 04/15/09-Vought-Discussed site with DEC Krimgold and AST requirements apply as per PBS as such DEC requires submission of monthly inspection records for past five years. If records cannot be produced than borings will have to be performed to insure no release. Spill #0809556 at same location for same tank closed and referred to this open spill. 04/17/09-Vought-Sent out letter to above addresses

VILLA HERMOSA APTS - BUILDING A (Continued)

S109374773

requiring 1)Submission of updated PBS application 2)biweekly groundwater monitoring, determination of groundwater flow direction and quarterly submission of reports 3)submission of well construction logs 4)submission of soil excavation sidewall samples from Building C 5)submission of monthly inspection records for past ten years 6)submission of ten year inspection reports 7)collection of soil and groundwater samples around the partially buried AST . Letter also included clause that Spill fund contractor must absolutely be present to collect duplicate samples and witness all borings... .
04/21/09-Vought-Received email from Curll with proposed site visit date for meeting with consultants on 5/7/09. Vought forwarded email to Envirotrac to determine their availability as well with cc to Janeski. Site meeting set up for 5/7 at 11am. 5/7/09-Vought-Site visit by Vought. Onsite were: Charles Guder(TRC) 212-221-7822x103 Stephen Evanoff(AIMCO)303-691-4560 Bob Perine(Metropolitan)347-366-4386 John Knief(East Coast Petroleum)-718-402-5107 Mark Ataman(Envirotrac)-631-924-3001 Frank Grassellino(Metropolitan)-212-835-9040 Scott Jaffee(Metropolitan)-212-835-9040 John Perotti(Merrit Engineering)-718-767-0923 Dave Lorthior(EnviroTrac)-631-924-3001
Topics of discussion included reasons for denial of no further action and above DEC requirements. Vought also discussed either installation of borings or suggested (but did not require) tank removal and replacement with full ASTs in order to ensure no further spills via lack of whole tank monitoring capabilities. 6/1/09-Vought-Received email from TRC Guder with attached letter. Letter dated 5/28/09.the following activities will be performed: 1. The three petroleum tanks on the site will be modified into aboveground storage tanks (ASTs). The work will be performed by a licensed fuel oil boiler repair and installation firm; 2. The resulting tank excavations will be inspected by the owner, the owners representative and the NYSDEC or their representative; 3. If visible petroleum contamination (i.e. free product) is not identified, endpoint soil and or groundwater samples will be collected in accordance with DER-10 .. 4. If visible petroleum contamination (i.e free product)is identified, work will stop and the owner, owner's representative, and NYSDEC will confer to determine further actions . The property owner is ready to begin this work immediately . They will contact DEC or rep to inform them of work start date. 06/5/09-Vought-Received email from TRC Guder that tank conversions to begin on 6/15/08 and Envirotrac cc'd on email. Vought to perform site visit that day as well. DEC requires: 1)Cc to ATS, Envirotrac, Beautiful Village and Janeski 2)Inspection of soil under partially buried USTs during conversion to full ASTs 3)DEC contractor presence when performing soil investigation 4)Submission of TTF results including failing and passing tests. 5)Determination of groundwater flow direction. 6)Well construction logs. 7)endpoints and/or field observations or pictures of basement excavation sidewalls. 8)Continuation of quarterly groundwater monitoring. 9)Updating of PBS registration to tank location of aboveground-10% or more below ground. 6/15/09-Vought-Site visit by Vought with Envirotrac (Lorthior and Ataman), TRC Guder and Metropolitan (Jaffe and Perine) and Eastcoast Petroleum. Eastcoast beginning to remove piping and will weld eye-hooks onto ASTs and use 3 train hosts to lift AST. AST will be emptied and cleaned prior to lift. Contractor will remove concrete around partially buired ASTs prior to lift and will order steel saddles for ASTs to sit on and will also put concrete under ASTs. 06/16/09-Vought-Received call from

VILLA HERMOSA APTS - BUILDING A (Continued)

S109374773

and spoke to TRC Guder who indicated that structural engineer was onsite this morning and TRC would keep Vought copied on results of inspection. 06/18/09-Vought-On vacation from 6/19 to 6/29. DEC Patel on 6/23 to: 1)call Envirotrac (Lorthior) to see if contamination found under lifted ASTs and to ensure adequate documentation as possible source for PIN at adjacent site. Vought onsite with TRC Kevin, Envirotrac Lorthior, Frank Grassellino(Metropolitan), Scott Jaffee(Metropolitan), Bob Perine(Metropolitan), John Knief(East Coast Petroleum). 5000-gallon UST in Building B was lifted and no free product encountered and no grossly contaminated product found. Tank underlain by concrete (possibly second floor) and Envirotrac and TRC collected endpoint samples witnessed by all. Envirotrac collected tens sidewall samples and TRC collected five samples. No signs of holes in tank and possible oil staining on one tank. Structural engineer also onsite. Vought also noticed two abandoned fuel oil supply return lines that run underground to adjacent building and Vought informed Jaffee that lines must be tightness tested. Also well that showed free product (MW3) screen depth to be checked to ensure that it straddles water table. Vought on vacation from 8/19-8/29 and site to be managed by DEC Patel. Scope of work for next week will be placement of concrete over tank lifted and reconnection of lines. 06/23/09-Hiralkumar Patel. 3:15 PM:- received email from Dave. lines will be tested on 06/24/09 and second tank will be lifted on 06/26/09 from building A. 06/24/09-Hiralkumar Patel. 11:50 AM:- spoke with Dave. he mentioned that instead of testing lines, owner choose to dug lines out. they are excavating today. there is someone from envirotrac and will collect samples. 1:30 PM:- visited site. met Bob, Kevin (TRC) and Dave Lorthior (EnviroTrac). employees of East Coast were exposing old lines. found three lines in each excavation from Buildings A,B,C: one old supply line, one most recent return line and one for gauge pipe. found odor in excavation for building A. will remove pipes tomorrow. 06/25/09-Hiralkumar Patel. 12 PM:- visited site. pipes removed from ground. Dave collected endpoint samples from building B area before i reached to the site. Dave mentioned that one area nearby tank room foundation wall found contaminated. there was clean sand right underneath the lines, but after removing couple of inches of soil, they found possible contamination. after building B, samples collected at building C. pipes removed from ground. found leak in area near boiler room foundation wall. strong odors noticed in soil. no other area in excavation found with contamination. collected endpoint samples. asked Dave to collect soil sample on other side of foundation wall inside boiler room (to see any migration of oil inside boiler room crossing foundation wall). during soil sample collection, found another old pipe running perpendicular to supply/return lines adjacent to foundation wall. found old pipe was ended in boiler room nearby pump area, but other end needs to be investigated. will excavate tomorrow to find out other end of pipe. this newly found old pipe runs towards building B, towards impacted site. Active return line was leaking evidenced by heavy soil contamination directly underneath the pipe and fresh product on pipe surface and pipe metal was flaking. after collecting samples at building C, collected samples at building A. found petroleum odors in soil about 3-4 ft away from boiler room foundation wall. tank in building A will be lifted on 06/29/09. asked Bob not to throw pipes away. 06/29/09-Hiralkumar Patel. 9:27 AM:- left message for Gavin (631-767-4228). 9:35 AM:- received call from Gavin. haven't started lifted tank at building A. Gavin checked area outside of boiler room

VILLA HERMOSA APTS - BUILDING A (Continued)

S109374773

at building C where old abandoned pipe found. contractor excavated about 4 ft of concrete nearby boiler room foundation wall. Gavin will look for any contamination. will excavate more to trace pipe end. 06/30/09-Vought-Site visit by Vought and onsite were Dave(Metropolitan), Marc(Envirotrac) and Wes Lindemuth(TRC). Vought inspected current status of all three building and noted that soil contamination noted at abandoned supply return lines in Buildings A and B and heavy soil contamination noted at active underground return line in Building C. Active return line in Building C was heavily deteriorated. Soil samples collected from under AST at building A and no PID or odors noted in soil. BUILDING B-old supply and active return line and line for petrometer removed, awaiting soil analyticals, PID hit noted in soil sample, excavation depth to 2'bg and no water in excavation. BUILDING A-old supply and active return line and line for petrometer removed, awaiting soil analyticals, Soil contamination noted under lines, excavation depth to 2'bg and no water in excavation. BUILDING C-old supply and active return line and line for petrometer removed, awaiting soil analyticals, heavy gross soil contamination noted under lines near boiler room foundation and hole noted in active return line, excavation depth to 2'bg and no water in excavation. 07/02/09-Vought-Site visit by Vought and soil samples collected from under UST at Building C. Vought noted active leak from AST (AST was emptied before lift) coming from bottom of UST. Approximate 2' patch of fresh free product on concrete underlying void space under AST. Vought spoke to Metropolitan Jaffee who requested to expedite center courtyard excavation and Vought discussed installation of test pits and or monitoring wells in courtyard. Meeting will be held with all parties once plans for center courtyard are finalized so that investigation and possibly remediation can coincide with courtyard development. 09/21/09-Vought-Reviewed draft investigation report submitted by EnviroTrac for piping run endpoint samples and AST removal samples (see 7/9/09 comments above), updated groundwater flow direction and sent comments back to EnviroTrac. Report concludes The removal of the subsurface piping at the site indicated that the return line for Building C was leaking , the presence of fuel oil compounds at the return lines for Buildings A and Building B despite being below current RSCO's', indicate a historical release of petroleum at these locations , soil samples collected beneath the tanks exhibited concentrations of petroleum associated SVOCs... , Groundwater in portions of the site appears to be migrating towards DeSales , Free phase product has been detected in some of the wells (MW3, MW4 and DEC-2)on a intermittent basis , Construction details for MW3 and MW4 are unavailable . Report recommends installation of wells west of Building B (between building B and DeSales courtyard, determination of construction of MW3 and MW4 with possible reinstallation, investigation of piping at Building C, continuation of biweekly monitoring and sampling and testing of all tanks and pipes as part of return to service. Meeting set up for 10/25 at 10am with DEC Austin, DEC Urda, NYSOAG Pesca, AIMCO Pennington and TRC Guder at Region 2 offices to discuss next step and cost recovery actions. 9/22/09-Vought-Reviewed email from TRC Guder dated 9/17/09 including well logs for MW1 and MW2, TRC split soil samples from piping endpoint samples, split samples from groundwater samples and groundwater contour map. Well construction logs for MW have 2' casing and 23' screen length and MW has 3' casing with 17' screen length. Groundwater contour map using wells MW1, MW2 and MW3 shows

MAP FINDINGS

VILLA HERMOSA APTS - BUILDING A (Continued)

S109374773

groundwater flow to the west toward fifth avenue. MW4 not used in groundwater contours. No site plan included with soil sample locations and as such cannot determine where samples collected from. Vought sent email to Guder requesting site plan with sampling locations. 9/24/09-Vought-Meeting scheduled at DEC on 10/25 at 10am with Pennington, Guder, AIMCO, DEC Austin, DEC Urda, Vought, EnviroTrac and NYSOAG Pesca. Received email from TRC Guder including site plan with sampling locations, requesting EnviroTracs survey information, note that he will provide his survey information and well construction logs for MW3 and MW4. Note that screen starts at 3'bg and groundwater data from EnviroTrac shows elevations at 2.79'bg(6/22/09), 2.85'bg(6/10/09), 2.9'bg(8/3/09) and as such this well is not suitable for collection of groundwater samples and monitoring. Vought reviewed split sample results from piping samples and noted that endpoint samples were missing from TRC for locations BB-PIPE-EP, BA-PIPE-EP, VH-BA-Ep-3, VH-BA-EP1, VH-BA-EP-2, BC-PIPE-EP. Soil analyticals show detections of compounds particular to fuel oil (despite being below TAGM RSCO's) including: 22ppb naphthalene(VHBBEP1), 77ppb phenanthrene(VHBBEP1), 29ppb naphthalene(VHBBEP2), 119ppb phenanthrene(VHBBEP2), 133ppb phenanthrene(VHBBEP4), 2ppb naphthalene(VHBCEP2), 541ppb phenanthrene(VHBCEP2), 16ppb acenaphthene(VHBCEP2), 82ppb anthracene(VHBCEP2), 83ppb anthracene(VHBCEP1), 70ppb phenanthrene(VHBCEP1). TRC groundwater data shows flow to the southwest however groundwater gradient map does not account for sump pit influence and must be resubmitted. Vought sent reply to TRC Guder with cc to all requesting survey info from EnviroTrac and also noted that both groundwater maps of EnviroTrac and TRC do not take account the operational sump of DeSales (which may cuase component of groundwater flow directly from Villa Hermosa to DeSales) and possible sump in 1255 5th avenue. Vought called Janeski who confirmed presence of sump and that it operated frequently during rain events and turned on at various times throughout day (operated by float switch). Vought sent email to all parties noting fact that sump was not taken into account in flow maps. Janeski also mentioned that he could arrange site access for 1255 5th avenue (coop president is Gerald Buschell and no PBS registration for site) on 9/25 at 8am. Vought called and arranged site visit at 8am with EnviroTrac and left message of same for TRC Guder. Note meeting at DEC at 10am after site visit. Vought received callback from and spoke to TRC Guder who noted that he would not be able to attend site visit but stated there was no need for him to be there as DEC would be performing inspection. 09/25/09-Vought-Site visit by Vought and EnviroTrac(Lorthior) to DeSales and 1255 5th Avenue for inspection of sump. Vought and Lorthior met with janeski and DeSales Super (Faton Halili) and inspected sump pit. Pit has numerous pipes leading to cinderblock lined box. Water surface present at 3' below grade in pit. As per Halili the sump only services piping that runs under basement floor but he is unsure of layout of piping. Janeski has building plans available for later inspection. Halili noted that basement has not flooded for years but was onsite for the oil seepage in 2003 which occurred during exceptionally heavy rains events. During one of the past flooding events Halili and super of 1255 5th Avenue (Peter) measured depth of basements below grade and determined that both basement floors are at same depth below grade. Halili pumped sump dry and depth to bottom is approximately 5'bg and cannot determine bottom of sump as filled with debris. No oil or oil staining observed in

sump (possibly due to oil impact occurring 5 years ago). Vought and Lorthior inspected 1255 5th avenue and met with doorman (Ismael) who has been onsite for past 15 years. Ismael indicated building is using natural gas for the past 15 years and has never had an oil impact. Two sumps located in basement of 1255 5th avenue. Envirotrac (Lorthior) provided hard copy of Investigation Report (see notes from 9/21/09 above). 9/25/09-Vought-09/29/09-Vought-See spill number 0313381 (Villa Hermosa) for more information. Investigation by EnviroTrac at 1600 Madison Avenue (Villa Hermosa Spill 0313381, 0810009, 0810012) indicate that Villa is potential responsible party. Site visit by Vought and Lorthior to inspect sumps as well as inform Janeski of updates and perform basement inspection. Vought noted that impacted basement area was being used for rest areas of custodial staff with no additional seepage of petroleum but slight petroleum odor noted only in custodial area. Meeting at 9/25 at DEC offices between DEC, NYSOAG and Villa Hermosa reps. Meeting was held at DEC on 9/25 including DEC Vought, DEC Austin, DEC Urda, NYSOAG Alison Pesca, EnviroTrac Lorthior, TRC Guder(212-221-7822), Mark Pennington (917-456-0747) attorney for AIMCO-prior owner of Villa Hermosa) and AIMCO Stephen Evanoff(303-691-4560). Pennington indicated that that there was no method of transport to DeSales and Vought mentioned that transport mechanism was groundwater. Decision reached to sent STIP to Villa Hermosa for spill at Building C and also to send letter to Villa Hermosa informing them that work below will start on DeSales (as Villa Hermosa currently not willing to accept responsibility). Vought will draft STIP requirement for review by Austin and Urda and will also contact DJaneski and EnviroTrac to arrange scope of work that State funded contractor (EnviroTrac) will need to perform to restore basement (epoxy and drywall removal) of DeSales and install upgradient wells on Villa Hermosa property. Vought sent email to Janeski with notes from 9/29 above and FOIL request information. 10/13/09-Vought-Drafted STIP with CAP including submission of passing and failing tank tests, reinstallation of MW3 and biweekly monitoring and quarterly groundwater sampling and submitted for review to DEC Urda an Austin. STIP to be sent to: Stephen Evanoff, PE, BCEE, CSP Aimco 4582 S Ulster Street Parkway Suite 1100 Denver, CO 80237 stephen.evanoff@aimco.com Office: 303.691.4560 Mobile: 303.884.1889 Fax: 303.300.3298 Vought called and spoke to Janeski and informed him that Vought would send email to him requesting approval to begin basement work. 10/14/09-Vought-Sent email to Janeski with CC to Pennington, Guder, Austin, Urda, Pesca requesting finalization of basement renovation plans for DeSales so that Department could perform work. Vought sent out STIP to AIMCO Evanoff for cleanup at Building C. CAP included reinstallation of MW3, biweekly monitoring and quarterly groundwater sampling and submission of passing and failing test results. Vought sent SCL letter to AIMCO for this Spill at Building A as endpoint samples are below TAGM Required Soil Cleanup Objectives. For analyticals and report see report entitled Investigation Report for Spill 0310458 from EnviroTrac dated 9/21/09. See spill #0310458 for ongoing DeSales cleanup and open Spill #0313381 for Villa Hermosa Building C cleanup. "

Remarks: "Tank test failure for 6,800 gallon #2 fuel oil tank. Fill pipe is on 107th st, air leak, oil leaking on floor from plumbing."

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was KOLLEENY 11/03/05: This spill transferred from J.Kolleeny to S.Kraszewski. 07/07/06: NYCHA summary report states no recovery system and no MWs on-site. NYCHA recommends that a site assessment be performed during tank replacemnt in 2008, as noted in Schedule A&C. - SK 02/06/07 - J.Kann - site reassigned from S. Kraszewski to J.Kann. 08/28/09: J.Kann - spill number 0813546 closed and consolidated with this spill. 2/4/11: J.Kann - Tank Closure Work Plan submitted on 1/14/11. 4/7/17: J.Kann - tank closure report received 3/27/12. Underground Storage Tank Closure and Spill Remediation Report dated February 22, 2012 was reviewed. Based on the report: - tank and fill lines were removed -12 soil and 1 groundwater sample were analyzed. -only a limited areal extent of remaining residual concentrations in soils were noted in 2 locations, EP-06 and EP-12 Benzo (a) anthracene 4.2 PPM (1.0 ppm RSCO) Benzo (b) Flouranthene 5.0 ppm (1.0 ppm RSCO) Benzo (k) flouranthene 8.5 ppm (1.0 ppm RSCO) Groundwater was ND for SVOCs and VOCs contained one constituent n-butylbenzene 11ppb (5ppb TOGS) Based on the report and closure request, spill closed."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

0810012 for other failures in same apartment complex. THIS SITE POSSIBLE SOURCE TO OPEN SPILL AND OPEN PIN 0310458. Left message for Advanced Tank Services(ATS)Laura Capelli (800-440-8265) to fax tank tightness test results. Vought received tightness test results and Vought received three results from three different tanks respectively (one with fill pipe in Madison Avenue, one with fill pipe on 107th street and one with fill pipe on 108th street). Vought opened up two additional spill numbers as failures in separate addresses as per property shark. Vought sent out TTFs with cc to property owner and below requirements to: Mr. Jesse Curl AIMCO - Boston 639 Granite Street, Suite 312 Braintree, MA 02184 Fax:(781) 849-7652 Phone:(781) 849-1471x105 12/9/08-Vought-Site visit by Vought with Envirotrac (Lorthior), TRC Guder, TRC Eva, Metropolitan Realty (Bob, Frank and David Cruz-Beautiful Village Redevelopment Associates-917-299-7822). AIMCO sold property but retains liability with respect to tanks as per TRC Guder. Tank is 8000-gallon #2 fuel oil UST and tank was isolated and passed tank only test as per TRC Guder. Fill line and supply/return lines were isolated and passed test. Compression fitting on vent line being replaced. Tank is a partially buried UST and not AST as registered. DEC requires TTF letter: 1)Cc to ATS, Beautiful Village, Envirotrac and Janeski 2)USTs associated requirements or investigation via soil borings. 3)DEC presence when performing soil investigation adjacent to UST 4)Submission of Updated PBS registration. 5)Fingerprinting at both sites if well installation at Villa Hermosa shows presence of petroleum contamination. 6)call to Metropolitan and if determination that tanks will remain USTs then associated UST requirements. If wish to register tanks as ASTs then excavation and replacement of tanks required. 7)submission of TTF results including failing and passing tests. 04/10/09-Vought-Current file review by Vought: Tank Tightness Test Report (TRC Curl)-12/26/08. The Site contains three distinct buildings, known as Buildings A, B and C. Each building contains a fuel oil fired boiler and a steel petroleum tank containing #2 fuel oil which is used to supply fuel to the boiler. Building 'A' contains a 7,500-gallon tank Building 'B' contains a 6,000-gallon tank, and Building 'C' contains an 8,000-gallon tank. Each tank is located in the basement of the building and the bottom 2 feet of each tank is vaulted and encased in concrete on top of the basement floor. See the following spill numbers: Building A-0810009 (TTF) Building B-0810012 (TTF) Building C-0313381, 0809556 (TTF, soil excavation and well installation). As part of AMICO's divestiture of the property, the prospective purchaser (Metropolitan Realty Group, LLC.) performed tightness testing of all three tank systems on 11/21/08. ATS reported that all three (3) tank systems failed when utilizing the Mesa 2-D test system, which is an acoustical test system. Isolation and retesting and repair work performed by ProTest. All three manways were replaced on tanks since the manhole gasket material was observed to be deteriorated. All three (3) tanks were found to be tight or not leaking when utilizing the EXY-3 Locator Plus test system. The following describes the repair work: Building A- The fill line was not tight and was replaced. After repair the tank system tested tight. Building B- The overfill whistle/vent line was not tight. The cause of this leak was determined to be deteriorated fittings and these were replaced. After repair, the tank system tested tight. Building C-The overfill whistle/vent line was not tight. The cause of this leak was determined to be deteriorated fittings and these were replaced. After repair, the tank system tested tight. The report

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

isolated and retested. Contact: Ken Walsh-Miller 516-876-7940 ext 316
 Ken will look for additional information and call DEC back soon.
 12/1/2010 - Sangesland received this e-mail/report from Ken Walsh at
 Miller Environmental. As per our conversation, I have attached a
 letter from Controlled Combustion to you and tank tightness test
 results that were performed by Pro Test. Based upon the test results
 and our findings; the area surrounding the tank appears clean. We cut
 a hole in the bottom of the tank and the concrete underneath the tank
 was also clean. The tank is now permanently out of service and will
 be abandoned. A 2,000 AST will be installed in its place. Based on
 our findings, the client (Controlled Combustion) is requesting a no
 further action letter and the spill to be closed. I thank you for
 your assistance. Ken Walsh, Miller Envir. See attached eDoc for
 report. "

Remarks: "NO SPILL / FAILURE ONLY."

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Contact Name:
DEC Memo:

HOWARD THOMPSON

"See also spill #9906774 1/8/08 - Raphael Ketani. Rachel Selsky of the Dept. of Corrections called to inquire as to whether this and other spill cases were still open. She is a student intern and is working to get the status of these cases. Her phone number is (518) 485-5602 fax:518-485-5563. 1/14/08-Vought-Received note from DEC Krimgold that inquiry was made regarding spill from (518)485-5602. Vought spoke with DEC Ketani and he knew only of call above and did not have file or any other info regarding case. Vought read both spills and DEC requires: 1)submission of contaminated soil analyticals as per caller from spill 0102021 2)size and location of tank removed and PBS registration as per spill 0102021 3)investigation of TTF of 5000-gallon #2 fuel oil UST as per Spill #9906774. Vought called Rachel Selsky who is working on closing. Rachel called Howard Thompson and he said there was no further info and spill and he thought it should be closed. DEC to fax copy of spill report and PBS registration: Mr. Keith Rupert State Office Campus Building 2 Albany, NY 12226 Ph: (518) 485-5410 Fax (518) 485-5563 email: kdrupert@docs.state.ny.us Spill reassigned from Ahmed to Patel by Vought as Patel is daytime runner. Vought sent letter with above requirements and one month due date with cc to Selsky. 02/26/08-Hiralkumar Patel. received letter from Mr. Rupert mentioning that they could not find any documents regarding reported spill cases (0102021 & 9906774). 03/03/08-Hiralkumar Patel. spoke with Ms. Selsky. explained her that if both cases reported to single tank field, then requires soil investigation in area from where tanks were removed. soil borings must be advanced to depth of three feet below bottom of excavation during tank removal. and if both cases were reported for tanks at different locations, then also requires soil investigation in area where 5000 gal #2 oil tank was/is located (9906774). asked Ms. Selsky to provide contractor's info and to submit work plan prior to any work. 03/26/08-Hiralkumar Patel. received call from Keith Rupert (518-485-5410) from Correction department. he mentioned that site had one aboveground tank inside building basement and after finding a leak in an old tank, they replace it with current 2500 gal AST (PBS #: 2-151645). PBS record doesn't have information about old tank. asked Mr. Rupert to register old tank. also asked him for soil sample at previous tank location, atleast to depth of three feet below bottom of excavation during tank removal. based on sample analytical, the department may require further investigation/remediation. spoke with Howard Thompson (Off. 914-948-0343, cell 917-682-2959) at NYS OGS, whose name found as caller in spill report. Mr. Thompson doesn't know anything about this spill and he doesn't remember reporting any spill to the department. no information available about tank location and depth of excavatoin (if any) during tank removal. so asked Mr. Rupert to investigate soil to depth of two ft below basement floor at former tank location. sent email to Mr. Rupert with PBS form. 04/02/08-Hiralkumar Patel. received call from Mike Pantano. he will email work plan. Michael V. Pantliano Project Scientist HDR ONE COMPANY - Many Solutions Ph. (845) 735-8300 ext. 311 (845) 548-6962 (C) Fax (845) 735-7466 Email: michael.pantliano@hdrinc.com 05/16/08-Hiralkumar Patel. received work plan from Mr. Pantliano. they will do two borings inside tank room and collect soil samples at least two ft below floor. sent email to Mr. Pantliano approving proposed work plan. asked him to submit work schedule. 05/22/08-Hiralkumar Patel. received email from Mr. Pantliano. will do soil boring work on May 28, 2008.

MAP FINDINGS

LINCOLN CORRECTIONS (Continued)

S104191938

07/08/08-Hiralkumar Patel. spoke with Mr. Pantliano about report. report is ready and currently under review. will submit report by end of 07/18/08. 07/23/08-Hiralkumar Patel. received spill closure report from HDR. abstract: - old 5000 gal tank was located in same location where current 2500 gal tank is - collected two soil samples from beneath the building slab in tank room - once the core bit penetrated the subsurface of the floor, groundwater immediately entered the core hole <----- - no contamination found in soil samples - no groundwater sample collected from any boring <----- - attached photo # 3 & 4 indicates that sheen was observed on groundwater in both borings <-- 08/01/08-Hiralkumar Patel. left message for Mr. Rupert requiring delineation of possible groundwater contamination via collection of groundwater samples from previous two borings and also from west side of tank (to cover all side of tank). spoke with Mr. Pantliano and mentioned him the same. sent email to Mr. Rupert and Mr. Pantliano requiring groundwater samples from previous two borings and also on west side of tank. asked to submit work schedule. 09/19/08-Hiralkumar Patel. received email from Mr. Pantliano with groundwater sample analyticals. collected three groundwater samples from temporary borings and found high Naphthalene in all three samples. mentioned to him that based on sample analyticals, the department requires further groundwater delineation via permanent wells and site specific groundwater flow direction. asked Mr. Pantliano to submit investigation report.
-----BS-1-----BS-2-----BS-3
Naphthalene-----1,600-----1,900-----1,900
1,2,4-Trimethylbenzene-----49-----85
Xylene-----32-----80-----141

11/04/08-Hiralkumar Patel. received investigation report. recommends to install three piezometers inside tank room, where borings were done and two piezometers in adjoining rooms to the north and east of tank room. 11/19/08-Hiralkumar Patel. sent email to Mr. Pantliano requiring submission of work schedule for proposed piezometers installation. mentioned to him that the department may require additional wells based on groundwater flow direction and groundwater sample analyticals. also asked him to remove any free product from piezometers/wells on weekly basis. email copied to Mr. Rupert. 12/15/08-Hiralkumar Patel. left message for Mr. Pantliano regarding well/piezometers installation. received call from Mr. Pantliano. they got approval last week for additional work. planning to schedule for week of 01/05/09. will call back with confirmed dates.

02/05/09-Hiralkumar Patel. spoke with Mr. Pantliano. will submit report by 02/10/09. received report from Mr. Pantliano. abstract: - cored through the concrete floor at the three previous soil/groundwater sampling locations (BS-1, BS-2 and BS-3) in the tank room - two additional borings were attempted outside of tank room, in the adjoining boiler room - during this investigation, groundwater was observed to be approx. 20 inches below top of concrete slab (approx. 8 inches below the bottom of concrete slab) - four piezometers were installed (PZ-1 through PZ-4); location of fifth boring was limited to one small area at the rear of the boiler room - during the installation of piezometers, noted that the waterproof membrane, located between the two 6 inch slabs, is a paper based product that is approx. 1/8 inch thick and is saturated with a tar like substance similar to creosote or coal tar <----- - the liner has a strong odor characteristic of moth balls - collected groundwater samples from three piezometers (PZ-1 to PZ-3); PZ-4 was

LINCOLN CORRECTIONS (Continued)

S104191938

dry and could not be sampled - during purging groundwater exhibited a petroleum like odor, however, sheen was not observed in groundwater - found high naphthalene concentration in groundwater sample alongwith minor concentration of other VOCs - analysis of waterproofing membrane reported elevated levels of VOCs and SVOCs with total concentrations ranging from 10,168,000 ppb to 2,110,000 ppb for VOCs <----- conclusions: - groundwater elevation during previous investigation was noted to be a couple of inches below the top of concrete slab; groundwater collected during previous investigation was in direct contact with waterproof membrane - during second round of sampling the groundwater elevation was approx. 6-8 inches below the concrete and was not in contact with waterproof membrane - concentration of naphthalene found in the waterproof membrane was 0.6 to 1.0 percent; however, #2 fuel oil only contains approx. 0.1 percent naphthalene based on submitted report, case closed."
 Remarks: "DURING TANK REMOVAL AT ABOVE LOCATION SOIL CONTAMINATION HAS BEEN DISCOVERED. AREA HAS BEEN EXCAVATED AND STORED ON SITE. FOR FURTHER INFORMATION CONTACT CALLER AT NYS OGS."

Tank Info:

Tank Number: 001
Tank Id: 58444
Material Code: 0001
Common Name of Substance: #2 Fuel Oil (On-Site Consumption)

Equipment Records:

H99 - Tank Leak Detection - Other
G03 - Tank Secondary Containment - Vault (w/o access)
L09 - Piping Leak Detection - Exempt Suction Piping
F00 - Pipe External Protection - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
D01 - Pipe Type - Steel/Carbon Steel/Iron
I05 - Overfill - Vent Whistle
J02 - Dispenser - Suction Dispenser
C01 - Pipe Location - Aboveground
I04 - Overfill - Product Level Gauge (A/G)

Tank Location: 3
Tank Type: Steel/Carbon Steel/Iron
Tank Status: In Service
Pipe Model: Not reported
Install Date: 01/01/2000
Capacity Gallons: 2500
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: MFLEONAR
Last Modified: 12/11/2017
Material Name: #2 fuel oil (on-site consumption)

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110067689031

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 107587
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIPPLE 12/12/2003 Management company telephone 917-709-4887 Sangesland spoke with Vega in apt B. He said he came to visit his grandmother and the apartment building was filled with a heavy oil smell. Vega called NYFD. Mike Mulqueen was at the site(Sangesland did NOT speak with Mike) Mulqueen reported the spill and estimated 30 gallons. According to Vega, NYFD and City DEP were both on site and gave the management company several written orders to clean & repair the spill. Sangesland called the management company and left a message. No response yet. Unknown who is doing the cleanup. No contact made yet with either owner or management company. 12/15/03 Tipple responded to the scene, rang all bells and was buzzed in, located boiler and tank area, found the spill, no one was to be found. It was not apparent if the spill was caused by a slow drip or asingle event. Tipple then Called Management company, Owner as per PBS registration and Tenant in apt.B , got no response. Spoke with Mulqueen, FDNY had put speedy dry and biosolve to absorb the oil and reduce the vapors. FDNY stated that a cleanup company should be in route Tipple sent letter to repair/ test/tank and clean spill.
12/15/03 Ray from Petroleum Tank Cleaners will PROBABLY do the cleanup. He will look at the site and get a signed contract. 3/5/2004 Sangesland spoke to Ray at PTC. PTC records show 4 drums & a van for 4 hours. Spill Complete Closed"

Remarks: "caller states that the tank looks like it is leaknig. it is an above ground 1000 gallon tank in the basement that has been leaking for about a week."

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
